STATE OF VERMONT
GREEN MOUNTAIN CARE BOARD
GMCB-003-24RR, GMCB-004-24RR

BLUE CROSS BLUE SHIELD OF VERMONT
INDIVIDUAL AND SMALL GROUP RATE FILINGS HEARING
PUBLIC SESSION

July 22, 2024
8:07 a.m.

Hearing held Remotely before the Green Mountain
Care Board via Microsoft Teams on July 22, 2024,
beginning at 8:07 a.m.

P R E S E N T

BOARD MEMBERS:

- Owen Foster, Chair
- Robin Lunge, Board Member
- David Murman, Board Member
- Jessica Holmes, Board Member
- Thom Walsh, Board Member

- Michelle Sawyer, Staff Member
- Mark Hengstler, Staff
Attorney
- Laura Beliveau, Staff
Attorney
- Michael Barber, Hearing
Officer

4 8:07 a.m.

5
6 P R O C E E D I N G S

7 MR. BARBER: Good morning
8 everyone. My name is Michael Barber, and I'm, as
9 Chair Foster said, I'm the Board's General
10 Counsel, and I'll be serving as a hearing officer
11 for today's hearing. The hearing is being held
12 remotely via Microsoft Teams.

13 The purpose of this hearing is to
14 take evidence and argument on Blue Cross and Blue
15 Shield of Vermont's 2025 individual and small
16 group rate filings. The docket number for the
17 individual rate filing is GMCB-003-24RR, and the
18 docket number for the small group rate filing is
19 GMCB-004-24RR.

20 The hearing is being held pursuant
21 to 8 V.S.A. Section 4062, as well as Section
22 2.307 of the Green Mountain Care Board's Rate
23 Review Rule, Rule 2.

24 It looks like we have all five
25 Board members with us this morning. We also have
26 Michael Donofrio and Bridget Asay from the law
27 firm of Stris & Maher LLP, who are representing

1 Blue Cross today.

2 Representing the interests of
3 health insurance consumers is Eric Schultheis
4 from the Office of the Health Care Advocate. And
5 Eric, is it just you or is Charles also here? I
6 can't see him.

7 MR. SCHULTHEIS: Charles is also
8 on, but I'll be primary. I'll be the only one on
9 camera in most cases.

10 MR. BARBER: Okay. The Board's
11 attorney, Laura Beliveau, is also here. She'll
12 be leading the direct testimony of the Board's
13 contract actuaries from Lewis and Ellis and may
14 also have questions for other witnesses.

15 We are recording today's hearing.
16 We also have a court reporter here to transcribe
17 the proceedings. We will provide the parties
18 with a copy of the transcripts when we receive
19 them.

20 Because we are holding this
21 hearing remotely, before we get any further, I
22 just want to make sure that -- we did a little
23 test of this, so I won't go through the whole
24 list, but I just want to make sure the Board
25 members in particular can hear, and we can hear

1 them. So if I call out your name, if you could
2 just please take yourself off, off mute and
3 confirm that you can hear and that we can hear
4 you.

5 So Board member Holmes.

6 MS. HOLMES: Yes. Can you hear?

7 MR. BARBER: Yes.

8 And Board Member Lunge.

9 MS. LUNGE: Good morning.

10 MR. BARBER: Good morning.

11 Board Member Murman.

12 MR. MURMAN: Here that?

13 MR. BARBER: Yeah, I can hear you
14 now -- could you --

15 MR. MURMAN: Just saying good
16 morning.

17 MR. BARBER: Good morning.

18 And Board Member Walsh.

19 MR. WALSH: Good morning.

20 MR. BARBER: Hi. Good morning.

21 So I -- does everyone have their cameras on? I'm
22 going to need to take a second to just pin
23 people, because I -- there's a lot folks on the
24 call. Okay. I see you now. Okay. If anybody
25 has any technical difficulties as we go forward

1 today, you can please just -- just text me and
2 let me know, and I'll pause the hearing while we
3 try to get that sorted out. So my cell phone
4 number is (802) 585-4829.

5 For any members of the public who
6 are present today, we will be taking public
7 comment at the close of the proceedings. I can't
8 exactly say when that will be. And if you don't
9 want to kind of wait around and sit through a
10 long day of witness testimony, we are having a
11 meeting later this week on Thursday, July 25th,
12 from 4 to 5 in the afternoon. And that will be
13 dedicated exclusively to hearing from the public
14 on both these rate filings and the individual and
15 small group rate filings from MVP.

16 So information about that meeting
17 can be found on the Board's website by clicking
18 on the link for the 2024 Board Meeting
19 information, or you could also go to the
20 Department of Library's home page, and they have
21 a calendar with all the upcoming meetings for all
22 state agencies, and you can find information that
23 way, too.

24 So I think we're ready to move on
25 to the exhibit binders. So we received binders

1 from Blue Cross on July 18th. It looks like all
2 the documents that contain confidential
3 information have been identified in the exhibit
4 list. The confidential information that is in
5 these documents is, I believe, marked with blue
6 highlighting.

7 Michael or Bridget, is there
8 anything else you want to say about how
9 confidential information is identified in the
10 exhibits?

11 MR. DONOFRIO: No, I think that's
12 exactly right.

13 MR. BARBER: Okay. Thanks. My
14 understanding is that Exhibits 1 through 22 are
15 documents that have been stipulated to by the
16 parties, while Exhibits 23 and 24 are lists of
17 documents that have been stipulated to by the
18 parties with the actual documents themselves not
19 being in the binders. Is that -- is that
20 correct?

21 MR. DONOFRIO: Yes.

22 UNIDENTIFIED SPEAKER: Yes.

23 MR. BARBER: And then, the exhibit
24 list shows an Exhibit 25, but I don't see a
25 document at tab 25 of my binder. Is this a

1 placeholder for something?

2 MR. DONOFRIO: Yes. That --
3 that's a placeholder. I believe in the past,
4 there have been occasions where the Board has
5 asked for something to be placed into the binder,
6 so we just left a placeholder just in case.

7 MR. BARBER: Okay. And then we
8 received an Exhibit 26 via email on Friday,
9 July 19th, which we did share with the Board
10 members. Has the healthcare advocate stipulated
11 to the admissibility of that document?

12 MR. DONOFRIO: Yes.

13 MR. BARBER: So does everybody
14 have all of those documents? So it would be 1
15 through 24 and 26.

16 MR. DONOFRIO: Yes. Thank you.

17 MR. BARBER: Board members, any --
18 do you all have that in front of you? Anybody --
19 does anybody not have any of those documents?
20 Okay.

21 MR. DONOFRIO: On Exhibit 26, I'd
22 just like to thank Mr. Schultheis and Mr. Becker
23 for working over the weekend and being in touch
24 to secure that stipulation.

25 MR. BARBER: Okay. So does either

1 party have any objection to me admitting exhibits
2 1 through 26 into evidence at this time?

3 MR. DONOFRIO: No. Thank you.

4 (Exhibits marked 1-26 were admitted
5 into the record.)

6 MR. BARBER: Okay. And please consider
7 that done.

8 The last item I wanted to check
9 off was, you know, I know Board members and the
10 parties are kind of old hats at this by now, but
11 please save any questions you may have about
12 confidential information for an executive or
13 nonpublic session. We have planned for at least
14 one, possibly two of those today.

15 The schedule that we had discussed
16 at the prehearing conference was that we would
17 hear from Ruth Greene first and then Jesse
18 Lussier and Commissioner Kevin Gaffney from the
19 Department of Financial Regulation and then Dr.
20 Tom Weigel. And then, we would have an executive
21 session to allow for some direct and cross on
22 confidential topics, particularly, I think,
23 around prospective solvency assessments and
24 provider contracting, other ones, potentially.

25 And then, we would hear from

1 Martine Lemieux and then Kevin Rugeberg, and
2 then Mike Fisher with a possible executive
3 session prior to Mr. Fisher's testimony, if
4 that's -- if that's needed.

5 So that's -- that's the schedule.
6 That's obviously a lot to get through today. So
7 I'm going to try to keep us on track and be
8 mindful of that. And if you could be as well, I
9 think that would be helpful. And if I -- if I
10 end up making a suggestion to kind of speed
11 things along, please don't take offense. There's
12 just a lot to get through.

13 So does either party or any of the
14 Board members, do you have anything that we need
15 to discuss before we move to opening statements?

16 MR. MURMAN: Nothing from us.

17 MR. DONOFRIO: No, thank you.

18 MR. BARBER: Okay. Would Blue
19 Cross like to make an opening statement?

20 MR. DONOFRIO: Yes. Thank you,
21 Mr. Hearing Officer. Good morning, Chair Foster
22 and Board members. Good morning, Mr. Barber,
23 Mr. Schultheis, Mr. Fisher, and the HCA team.
24 I'm Mike D'Onofrio. I'm here with my colleague,
25 Bridget Asay, from the law firm of Stris & Maher,

1 representing Blue Cross Blue Shield of Vermont.

2 So like I said at this time last
3 year, on behalf of the Blue Cross team, we all
4 appreciate and take really seriously the inherent
5 difficulty of the Board's job in doing rate
6 review. You have to balance the interdependent
7 statutory factors, including whether the proposed
8 rates are affordable, whether they promote high
9 quality care, and whether they support robust
10 access to that care.

11 And as an aside, I just want to
12 clarify that when I say proposed rates, I mean,
13 not the originally filed rates, but the rates as
14 shown in Ms. Lemieux's supplemental prefiled
15 testimony. So kind of like our current, you
16 know, most operative version of the rates. So at
17 the same time, you have to consider that kind of
18 three-legged stool. You also have to make sure
19 the rates are adequate and not excessive, and
20 that they protect the insurer's solvency.

21 I also said to you last year that
22 I wished we could offer you an easy pathway
23 through that thicket. And like last year, I'm
24 sorry to say that we can't. In that vein, I
25 think that this year presents perhaps the most

1 challenging set of circumstances that this group
2 collectively has faced in the eleven years you've
3 been reviewing Blue Cross's rates.

4 That follows from two hard
5 realities. First, Vermont's healthcare costs
6 continue to grow at an unsustainable rate.
7 That's clear and undisputed from evidence in the
8 record, including the filings themselves, the
9 information that we've provided in response to
10 questions from the Board and the HCA, the
11 prefiled testimony we've submitted, the live
12 testimony you'll hear today and L & E's, that's
13 Lewis and Ellis' evaluations of Blue Cross's rate
14 development.

15 Second, Blue Cross' solvency is in
16 kind of an unprecedented and perilous state, as
17 we come into the hearing. The 2023 year end RBC
18 ratio of 337 percent, a historic low over the
19 lifespan of this proceeding dating back to 2014,
20 sounded initial alarm bells, and since then, the
21 situation has gotten worse, thanks to
22 significantly higher than projected 2024 claims.

23 This fact is also clear and
24 undisputed in the record, based on Ms. Greene's
25 prefiled testimony, again, our responses to Board

1 and HCA questions, and most importantly, the
2 Department of Financial Regulations solvency
3 analysis of the two filings.

4 In fact, DFR, who is Blue Cross'
5 solvency regulator, has noted that Blue Cross'
6 RBC has crossed the statutory threshold requiring
7 Blue Cross to develop and provide a plan to DFR
8 to improve its RBC level under V.S.A. 83.08. And
9 DFR's recommendation, which you'll find in the
10 binder at Exhibits 16 and 17, it's -- it
11 amplifies the need this year to grow and not
12 further deplete Blue Cross' reserves going
13 forward, and I want to just read a bit of the
14 recommendation. So beginning the quote here.

15 "DFR's overall solvency assessment
16 of Blue Cross finds that the original proposed
17 CTR, and therefore, the rate, is insufficient and
18 must be significantly adjusted upward. Blue
19 Cross has indicated to the Department the company
20 will be adjusting the CTR factor from three
21 percent to seven percent.

22 The Department supports this
23 increased CTR and finds it necessary to increase
24 and stabilize reserves of Blue Cross. Any
25 downward adjustments to the filings of the rate

1 components that are not actuarially supported may
2 prevent Blue Cross from meeting the necessary CTR
3 and will further reduce Blue Cross' surplus and
4 negatively impact its solvency". So in terms of
5 roadmap of the hearing, Blue Cross will offer
6 testimony from three witnesses today. First,
7 you'll hear from Ruth Greene, Blue Cross' Chief
8 Financial Officer. She'll detail the very
9 serious dire solvency situation the company is
10 facing and is prepared to testify generally about
11 the company's finances.

12 After Ms. Greene, we'll hear from
13 DFR and then Dr. Thomas Weigel, Blue Cross Chief
14 Medical Officer, will take the stand. He's
15 prepared to discuss Blue Cross' efforts to do
16 what it can to keep the rates as affordable as
17 possible, in spite of the gale force headwinds I
18 discussed a moment ago.

19 And then finally, Martine Brisson-
20 Lemieux, Blue Cross' Chief Actuary, will testify
21 about the actuarial development of the rates,
22 which, as I mentioned above, is not in dispute
23 this year. Lewis and Ellis and Blue Cross
24 essentially agree on the actuarial analysis and
25 rate development.

1 So I want to sum up with two
2 thoughts. First, Blue Cross' solvency situation
3 is the result of many factors accumulating over
4 time. Healthcare costs that grow faster than
5 anyone anticipates, the behavior of financial
6 markets, underfunding of the rates over time in
7 these markets, as depicted on the table on page 6
8 of Exhibit 1, the actuarial memo, and then
9 unforeseen strains on the system, like the
10 COVID-19 pandemic.

11 The list reminds me that when I
12 was working for the Board back in the early days
13 of rate review. In one of the early rate
14 hearings, Blue Cross explained that the reason
15 why insurance companies have reserves is to make
16 sure that the insurer can always fulfill its
17 obligations to its members, whatever happens in
18 the face of external events like financial
19 upheaval or pandemics, or what have you. And
20 that comment, that memory rings prophetic in kind
21 of an eerie way today.

22 So in any event, this year, the
23 Board, in an unprecedented way, must approve
24 rates that it believes will add to and grow Blue
25 Cross' reserves in light of the solvency

1 situation. Second, Blue Cross understands that
2 many of our members are already struggling to pay
3 the rates and that these proposed rates just
4 intensify those struggles. We've read the public
5 comments that the Board shared with us on Friday,
6 and they -- they -- they speak a powerful
7 message, and we -- we-understand that painful
8 reality.

9 I think we've all asked ourselves
10 throughout this whole process, how can we say
11 these rates are affordable, one of the criteria
12 that you have to evaluate in the face of -- of
13 this reality and these -- these voices. And
14 it's -- I'd offer up to you that it's -- the
15 reason why we can is that in this context, in the
16 context of reviewing health insurance rates,
17 affordable has to mean something like as
18 affordable as possible, given the unavoidable
19 obligation to cover members' projected healthcare
20 costs.

21 So as painful as we know it will
22 be for many of our members, we have no choice but
23 to propose rates that we believe will cover those
24 projected healthcare costs, which are already
25 high and which we know will continue to grow. In

1 light of our extremely challenging solvency
2 situation, we have no choice but to propose rates
3 that will also shore up our financial footing so
4 that we can continue to serve Vermonters in these
5 markets.

6 So last year at the end of my
7 opening, I said something like this. If you
8 reduce Blue Cross' proposed rates, but underlying
9 costs and utilization grow as projected, and this
10 year, as the evidence strongly supports, they
11 likely will, Blue Cross will sustain another loss
12 in this market at a time when its solvency
13 position needs to be prospectively maintained and
14 not taxed. And unfortunately, that's where we're
15 at. Blue Cross did sustain further losses in
16 these markets in calendar year 2023, and calendar
17 year 2024 appears to be following suit.

18 So in light of the above, and in
19 light of the testimony that you'll hear today, we
20 respectfully request that you approve the
21 proposed rates, which will allow Blue Cross to
22 continue to work with you, the HCA, other
23 shareholders, stakeholders across the system to
24 make Vermont's healthcare system more sustainable
25 over time.

1 Thank you for your team's energy
2 and attention during today's hearing throughout
3 this entire process, and we look forward to the
4 conversation with you today. Thank you.

5 MR. BARBER: Thank you, Mr.
6 D'Onofrio.

7 Mr. Schultheis, would you like to
8 make an opening statement?

9 MR. SCHULTHEIS: I would.

10 So good morning all. Good
11 morning. Board members, Chair Foster, Blue Cross
12 Blue Shield. My name is Eric Schultheis, and I'm
13 a staff attorney with the Office of the Health
14 Care Advocate. I want to recognize, like Mr.
15 Donofrio, that this year presents unique
16 challenges. There is a real concern for Blue
17 Cross' solvency. We are also staring down the
18 impending expiration of enhanced premium tax
19 credits, which means there will likely be a huge
20 financial cliff for many Vermonters in 2026.

21 Amidst these unique challenges, a
22 few things, unfortunately remain the same. The
23 small group market is not supported by federal or
24 state subsidies, meaning that the full burden of
25 premiums and deductibles falls on small

1 businesses and their employees. In the
2 individual market, even with enhanced subsidies,
3 far too many Vermonters struggle to afford health
4 insurance, let alone use it.

5 Our office has looked at the 2025
6 rates every possible way we can think of. It
7 pains me to say that this year, we believe that
8 Blue Cross will need a substantial rate increase
9 to ensure it can continue to provide Vermonters
10 with health insurance.

11 Make no mistake, our neighbors and
12 local businesses cannot afford this large
13 increase. More people will not be able to afford
14 to use insurance even if they buy it. Many of
15 our neighbors' lives will be ruined by incurring
16 more medical debt. We believe we are choosing
17 between two horrible things -- risk causing Blue
18 Cross to become insolvent and force Vermonters to
19 lose their coverage in the future or make
20 Vermonters insurance costs even more affordable
21 today. In other words, the Board is forced to
22 choose not whether Vermonters will suffer, but
23 when they will suffer.

24 The choice before you today makes
25 one thing painfully clear. The system does not

1 work for Vermonters. There are three immediate
2 steps the Board could take to make this system
3 incrementally better for Vermonters. These steps
4 will not solve our problems. These three steps
5 will not change the horrible choice Blue Cross
6 and the hospitals have forced upon you. These
7 steps will, however, at least move us in the
8 right direction.

9 First, Blue Cross needs to take
10 more accountability for organizational reform to
11 reduce costs and improve efficiencies. It is
12 easy to diffuse responsibility and blame problems
13 on the Board, or simply to say it is trying hard
14 enough. It is harder to evaluate your own
15 organization and recognize the need to improve.
16 Vermonters deserve that Blue Cross. Stop finger
17 pointing. Stop saying it is doing everything it
18 can and look hard at what it can do better.

19 Second, the Board needs to finish
20 its efforts to implement a definition of
21 affordability that encompasses the dual burden of
22 premiums and deductibles. Affordability is not
23 mere cost reduction efforts by carriers. It must
24 reflect affordability for Vermonters as mandated
25 by rural and statute. The effort to define

1 affordability must be revisited, and this effort
2 must lead to a definition.

3 Third, the Board needs to regulate
4 the entire cost equation. We know that medical
5 unit costs are a major driver of premium
6 increases, yet the disparity in regulation
7 between carriers and hospitals is glaring. While
8 carrier rates are set in stone, hospitals often
9 exceed approved budgets without repercussion.

10 Further, revenue overages are
11 frequently just baked into the next budget
12 submission, thus perpetuating cost overruns into
13 the future. To make matters even worse,
14 hospitals shirk their duty to look inwards when
15 it comes to managing costs. Instead, we
16 regularly hear from hospitals that Medicaid
17 reimbursement rates are supposedly too low in
18 Vermont, and thus the high commercial charges are
19 justified.

20 However, Vermont has the highest
21 Medicaid reimbursement rate in New England and
22 one of the highest in the nation. Public payer
23 reimbursement is not the reason for the high
24 commercial charges of most Vermont hospitals.

25 It is not a debate, just like

1 climate change is not a debate. The evidence
2 only supports one side. For the sake of
3 Vermonters, this absurd excuse for high prices
4 cannot continue, and hospitals must be held to
5 account by the Board for its ordered charge
6 increases. Before I summarize our position, I
7 want to be completely clear. We are placed in
8 today's position, not because of past Board
9 actions or because of something Vermonters did.
10 We are here because of the actions of regulated
11 entities.

12 You will undoubtedly hear from the
13 regulated entities why someone else is to blame
14 for what is happening. Please remember that the
15 only people who lose in the endless game of
16 finger pointing between hospitals and insurers
17 are Vermonters.

18 In summary, as we navigate Blue
19 Cross' extreme 2025 rate proposal, a balanced
20 approach is essential, one that addresses
21 solvency, and it tends to mediate our neighbors
22 suffering today. Blue Cross must stop finger
23 pointing and look inward. The Board must renew
24 its efforts to establish an affordability
25 standard, ensuring that the lived experience of

1 Vermonters have a voice in our regulatory
2 decisions. Lastly, the current system of
3 regulation must be changed so that it effectively
4 controls medical cost growth. Vermonters' health
5 and pain are worth far more than these things.
6 We can, including myself, must do better and must
7 do better. Thank you.

8 MR. BARBER: Thank you. Mr.
9 Schultheis. So Blue Cross can now call its first
10 witness.

11 Ms. ASAY: Thank you. Good
12 morning, Hearing Officer Barber, Chair Foster,
13 Board members and HCA Counsel. I'm Bridget Asay,
14 also here on behalf of Blue Cross, and we call
15 Ruth Greene as our first witness.

16 MR. BARBER: Okay. Ms. Greene,
17 are you ready to take the oath?

18 MS. GREENE: I am.

19 Whereupon,

20 RUTH GREENE,
21 a witness called for examination by counsel for
22 the Petitioner, was duly sworn, and was examined
23 and testified as follows:

24 MR. BARBER: Okay. Go ahead, Ms.
25 Asay.

1 MS. ASAY: Would you please state
2 your full name for the record?

3 MS. GREENE: Ruth Greene.

4 MS. ASAY: Ms. Greene, what is
5 your position with Blue Cross Blue Shield of
6 Vermont?

7 MS. GREENE: I am the Treasurer
8 and Chief Financial Officer of Blue Cross
9 Vermont.

10 MS. ASAY: Did you submit prefiled
11 testimony in this matter?

12 MS. GREENE: Yes, I did.

13 MS. ASAY: And can you identify
14 that, please, by exhibit number?

15 MS. GREENE: My prefiled testimony
16 is Exhibit 19 in the binder.

17 MS. ASAY: Is the testimony
18 contained in Exhibit 19 true and correct to the
19 best of your knowledge?

20 MS. GREENE: It is.

21 MS. ASAY: Ms. Greene, you've
22 testified at the Board's rate review hearings now
23 every year for a decade, right?

24 MS. GREENE: I have.

25 MS. ASAY: How was this year

1 different?

2 MS. GREENE: I cannot overstate
3 the seriousness of the financial challenges that
4 Blue Cross is facing today. Our member reserves
5 are at a historic low. RBC is far below the
6 range required by the Department of Financial
7 Regulation and trending downward. The critical
8 need to protect our solvency is the main issue
9 presented at the hearing. We understand that
10 we're asking for a large increase on premiums
11 that are already high.

12 The fact is, paying for the
13 healthcare for our members is getting more and
14 more expensive. The approved premiums in -- in
15 these markets haven't kept pace with the cost of
16 healthcare for our members, and the math is
17 simple. Losses are paid out of reserves.
18 Reserves are finite and shrinking. And we can
19 barely manage the losses that we're experiencing
20 in 2024, and this cannot be repeated in 2025. We
21 don't make this request lightly. To continue
22 serving these markets and avoid a full-blown
23 solvency crisis, we have to have fully-funded
24 rates with a seven percent contribution to
25 reserve.

1 MS. ASAY: All right. You
2 mentioned RBC, and let's start there. What is
3 the RBC range that the Department of Financial
4 Regulation requires for Blue Cross Vermont?

5 MS. GREENE: The RBC range
6 required is 590 to 745.

7 MS. ASAY: And I just want to
8 pause here, Hearing Officer Barber, and just
9 preview for the Board and ACA counsel.

10 Ms. Greene will testify in the
11 public session regarding reserves and RBC
12 position for yearend 2023. Consistent with the
13 Board's confidentiality rulings on our filings,
14 we will reserve discussion of interim RBC and
15 projections for an executive session. And I'll
16 address that further at the end of the direct
17 testimony.

18 Ms. Greene, what was Blue Cross
19 Vermont's RBC position at the end of 2023?

20 MS. GREENE: At the end of 2023,
21 it was 337.

22 MS. ASAY: How much did Blue Cross
23 hold in reserves at the end of 2023?

24 MS. GREENE: Eighty-eight million
25 dollars.

1 MS. ASAY: How would you describe
2 Blue Cross's financial position and outlook at
3 the end of 2023?

4 MS. GREENE: Our financial
5 position at the end of 2023 was highly
6 concerning.

7 MS. ASAY: How so?

8 MS. GREENE: Both our member
9 reserves and RBC had dropped to 337, which is
10 very, very low. In 2022, we had experienced
11 significant losses that brought the RBC down to
12 434. Then, as we went into and completed 2023,
13 the losses continued and were even higher due to
14 higher claims than what we had predicted. And
15 that was what pushed RBC down to 337.

16 We were talking with the
17 Department of Financial Regulation ever since,
18 really our RBC dropped below the bottom end of
19 the target range. So we've been providing them
20 with regular updates on the current situation.

21 MS. ASAY: As Blue Cross'
22 treasurer and CFO, what kind of concerns were in
23 your mind when you were assessing the company's
24 financial position at the end of 2023?

25 MS. GREENE: I really had two

1 concerns. The first and foremost is focusing on
2 a plan to make sure that we had fully-funded
3 rates and able to bring our RBC towards the
4 target range or at least make significant
5 movement towards the target range. But also top
6 of mind with an RBC of 337 is just the lack of
7 flexibility and how we've talked before about the
8 need for insurance companies to have adequate
9 reserves to weather unexpected events and things
10 that are out of the company's control and still
11 being able to pay claims in the face of those
12 unexpected events.

13 So starting the year with reserves
14 at such a low point, really was very concerning.
15 In addition to our focus on recovery of RBC, it
16 was very clear that our capacity for growth was
17 also very limited -- in fact, down to zero.

18 MS. ASAY: With that backdrop in
19 mind, how has the first half of 2024 played out
20 for Blue Cross?

21 MS. GREENE: The first half of
22 2024 got significantly worse. We have, as I
23 included in my prefiled testimony, we had a
24 claims surges in April and May that really tested
25 our ability to keep paying those claims and also

1 caused concern given that it really is important
2 for the premiums to cover the claims. So we are
3 continuing to pay out of reserve.

4 MS. ASAY: Did you provide details
5 about the claimed surge in your pre-filed
6 testimony?

7 MS. GREENE: Yes, I did.

8 MS. ASAY: Is there anything you
9 want to highlight for the Board from that
10 testimony?

11 MS. GREENE: Yeah. There was two
12 things that I'll note here in that. First, is
13 the surge that we saw in April and May really was
14 focused in the medical facility claims, not --
15 notably not the pharmacy or prescription drug
16 claims. This means that the latest surge is
17 coming from the providers that are regulated by
18 the Board.

19 The second thing I'd like to point
20 out, and if we could go to page 11 of Exhibit 19,
21 there's a table on that page that shows the
22 increase in per member per month medical claims
23 from '22 to 2024. It's the second table at the
24 top of that -- from the top of that page.

25 These increases are way higher and

1 faster than what we had included in claims. And
2 if the contributions reserves had been fully
3 funded over a number of years, we might be able
4 to sustain such a significant increase, as shown
5 there. But we really can't absorb this at this
6 point given the low level of member reserves.

7 MS. ASAY: So just looking,
8 staying on that chart, have Blue Cross rates been
9 growing at the same pace as those claims
10 expenses?

11 MS. GREENE: No, they have not.

12 MS. ASAY: Is it fair to, just in
13 plain English, describe Blue Cross' reserves as a
14 cushion?

15 MS. GREENE: Yeah. It's fair to
16 describe that, although, with reserves at such a
17 low level there is no cushion left. That has
18 been clear since the end of last year.

19 MS. ASAY: Ms. Greene, you
20 testified both here a few moments ago and in your
21 prefiled testimony that Blue Cross Vermont is
22 requesting a seven percent contribution to
23 reserves for these markets. Is that a change
24 from the request made in the original rate
25 filings?

1 MS. GREENE: Yes, it is.

2 MS. ASAY: And what was the
3 original request?

4 MS. GREENE: The original request
5 in the rate filing was three percent CTR.

6 MS. ASAY: Can you please briefly
7 explain the context for making that request in
8 the original filing?

9 MS. GREENE: Sure. At the time of
10 the filing, we had only preliminary 2024 results.
11 As you know, the claims are not made and
12 processed instantaneously, so it takes a little
13 bit of time to understand how the early part of
14 the year is developing. I can provide more
15 details in executive session, but -- around RBC
16 levels since the beginning of the year, but at
17 the end of or at the time of the rate filing, the
18 first quarter or the first three months of the
19 year, we're a little bit high, but not
20 significantly so in terms of claims. And we were
21 still projecting RBC at the end of 2024 to be a
22 modest increase over the end of 2023.

23 We also knew that the rate
24 increase proposed for 2025 was very high. This
25 is a result of the escalating and continuing

1 increases in the medical costs and the healthcare
2 costs of our members. We knew that it would be
3 very difficult to increase CTR on top of already
4 high increases. We did discuss the idea of
5 increasing CTR to five percent, and I feel we
6 could have made a justification for that, but at
7 the time we were very reluctant to add to the
8 already high increases.

9 MS. ASAY: What changed after the
10 rate filing in May?

11 MS. GREENE: Again, I can discuss
12 projected RBC figures in executive session, but I
13 can say that the April and May underwriting
14 results were very, very unfavorable to our
15 expectations, and our financial picture got
16 significantly worse. As April claims came in, we
17 started to become concerned. And then when May
18 claims came in in June, we definitely felt that
19 some action is required. Our RBC continued to
20 trend downward.

21 MS. ASAY: Is Blue Cross now
22 requesting a seven percent CTR in individual and
23 small group markets.

24 MS. GREENE: Yes. We urgently
25 need the Board to approve fully-funded rates,

1 including a seven percent CTR.

2 MS. ASAY: And is that request
3 prompted by a -- by the reserve position?

4 MS. GREENE: Yes.

5 MS. ASAY: Ms. Greene, can you
6 clarify what you mean when you say that the rate
7 needs to be fully-funded?

8 MS. GREENE: Yes. I outlined this
9 in my pretrial testimony on page 8 of Exhibit 19.
10 That -- bottom of the page. "We can only achieve
11 our target CTR if all components of the rates are
12 adequately funded. If the Board reduces other
13 components of the filed rate, those reductions
14 are effectively reductions to CTR." So when I
15 say fully-funded rates, I mean that the
16 assumptions need to hold and also include an
17 appropriate sufficient CTR.

18 MS. ASAY: Has Blue Cross been
19 consulting with the Department of Financial
20 Regulation as you've been assessing these
21 developments?

22 MS. GREENE: Yes, we have. As
23 soon as the April and May results began to
24 emerge, we reached out, and I'm in touch with CTR
25 on the most recent developments. We have been in

1 touch with them regularly, but this was
2 unexpected. And we also shared with them our
3 plans for bringing RBC back into the target
4 range.

5 MS. ASAY: What is that plan?

6 MS. GREENE: The overriding
7 priority for moving RBC for Blue Cross back
8 towards and into the required range is to have
9 fully-funded premiums, including a sufficient
10 CTR. That has to be significant enough to move
11 RBC to the minimal, minimally adequately-funded
12 level.

13 MS. ASAY: Ms. Greene, have you
14 read the solvency letter in this proceeding,
15 which is at Exhibit 16 and 17 in the binder?

16 MS. GREENE: Yes, I have.

17 MS. ASAY: Do you have any
18 reaction to the DFR letter to share with the
19 Board?

20 MS. GREENE: Yeah. I'd like to
21 point out several items. In fact, on the first
22 page, they say that Blue Cross is facing
23 extraordinary circumstances, and they explain
24 that with the recent drop in RBC that has
25 triggered a statutory action level. So we are

1 required by law to take steps to stabilize our
2 situation. VFR on the next page also agrees that
3 the 3 percent CTR is inadequate as filed. The
4 Commissioner explains on page 2 "that an increase
5 in the contribution to reserves is necessary to
6 increase the company's surplus toward acceptable
7 levels for the protection of policyholders."

8 They go on to show how the CTR for
9 this book of business or that these markets have
10 been underfunded in recent years, significantly
11 underfunded. And in plain English, that means
12 that those losses on page 3 have been paid out of
13 reserves instead of premiums. And then the
14 bottom line is the VFR letter also expresses that
15 they agree with our request for 7 percent CTR.

16 On page 4, there's a quote that
17 talks about our request for seven percent, and it
18 says that the Department, "finds it necessary to
19 increase and stabilize reserves of Blue Cross
20 Blue Shield of Vermont."

21 So this is our solvency regulator,
22 and they stated publicly in their letter that we
23 have to take action to stabilize our situation.
24 And as a result of our RBC filing in 2024, we do
25 have statutory action event in place. And they

1 are saying that this is what we need to do, and I
2 don't think it can be any clearer than that.

3 MS. ASAY: Ms. Greene, are you
4 prepared to provide additional testimony and
5 answer questions regarding Blue Cross's interim
6 RBC calculations and RBC projections for 2024 and
7 '25?

8 MS. GREENE: Yes.

9 MS. ASAY: Is it appropriate to
10 provide that testimony at a public session?

11 MS. GREENE: No, it is not.

12 MS. ASAY: And why not?

13 MS. GREENE: Our financial
14 projections are confidential, commercial --
15 commercially sensitive information that provide a
16 business advantage to Blue Cross. We make
17 reasonable efforts to maintain the
18 confidentiality of our financial projections, and
19 doing so is important in a competitive --
20 competitive environment.

21 Our financial projections also
22 include items that relate to confidential
23 contract negotiations, and the same is true for
24 interim midyear RBC calculations. They are not
25 final numbers, and they do not typically -- and

1 we do not typically share those calculations
2 publicly. And they are confidential,
3 commercially sensitive information.

4 MS. ASAY: In your pretrial
5 testimony, you outlined some other actions in
6 addition to the rate request here that Blue Cross
7 is taking as part of its recovery plan. Do you
8 recall that?

9 MS. GREENE: Yes.

10 MS. ASAY: And those are on pages
11 14 to 15 of Exhibit 19.

12 MS. GREENE: Yes.

13 MS. ASAY: Are some of those
14 actions also confidential?

15 MS. GREENE: Yes. As we explained
16 in our confidentiality request, some of those
17 actions are not public and disclosing them now
18 would disclose confidential, commercially
19 sensitive information that provides a business
20 advantage to Blue Cross. I can discuss further
21 in executive session if the Board has questions.

22 MS. ASAY: So with respect to the
23 actions that can be discussed publicly. Is there
24 anything that you would like to highlight for the
25 Board?

1 MS. GREENE: Yeah. I think the
2 main point, and we'll keep coming back to this,
3 is the main driver of adequate reserves is fully
4 funded rates, including a sufficient contribution
5 to reserve. There really are no levers as
6 significant as that. There are other things we
7 can do, and they all do contribute, but they
8 really are not -- they pale in comparison to
9 ensuring that premiums are adequate, including
10 sufficient contribution to reserves.

11 MS. ASAY: Are you taking any
12 steps regarding administrative costs?

13 MS. GREENE: Yes. And I take the
14 comments by the HCA that we have Blue Cross Blue
15 Shield of Vermont has been working to be more and
16 more efficient and effective at what we do. L &
17 E for years has pointed out that our
18 administrative cost structure is very low by
19 national standards, especially for Small Blue
20 Plan. Beginning last year, in the middle of the
21 year when our RBC dropped below 400 percent, we
22 took further steps to limit any discretionary
23 spend as you would expect we would do under the
24 circumstances.

25 But we can't stop processing

1 claims or supporting our members or communicating
2 with providers and implementing our, for example,
3 fraud, waste and abuse programs, and meeting
4 regulatory requirements. This is the core of
5 what we have to continue to do.

6 So there's really no way to -- as
7 an example, there's no way to sustainably reduce
8 administrative costs that would be significant
9 enough to, in the long run, repair -- repair the
10 RBC. But it is important, and it does
11 contribute. So we do remain focused on it. The
12 cost of care for our members is the main driver
13 of the reserve recovery, and we have to have
14 premium rates, including a sufficient CTR that
15 cover that cost.

16 MS. ASAY: So turning then to the
17 rates in these markets, have those rates
18 historically provided an adequate CTR?

19 MS. GREENE: No, they have not.

20 MS. ASAY: I'd like to direct you
21 to Exhibit 1, page 6 -- page 6 of the actuarial
22 memorandum.

23 MS. GREENE: I'm there.

24 MS. ASAY: Do the charts on page 6
25 of Exhibit 1 show the historical experience in

1 the QHP market?

2 MS. GREENE: Yes.

3 MS. ASAY: Is there a chart that's
4 similar to the first chart on page 6 of Exhibit 1
5 that's found in Exhibit 13 on page 5?

6 MS. GREENE: Yes. The exhibit in
7 Exhibit 13 corrects an error, but the bottom line
8 on that table is the same.

9 MS. ASAY: And what is the bottom
10 line?

11 MS. GREENE: The bottom line is
12 dark. You can see that since the inception of
13 these markets, we've had a cumulative loss, and
14 that loss is noted in the paragraph below. The
15 total loss in these markets cumulatively is \$40.4
16 million. So that \$40.4 million has come out of
17 member reserves.

18 MS. ASAY: What were the losses in
19 these markets in 2022 and 2023, and if you could
20 point to the chart, the relevant chart?

21 MS. GREENE: Sure. The second
22 chart on page 6 of Exhibit 1 on the far right,
23 shows the gains and losses for each year, and the
24 cumulative total is 40 million. In 2022, the
25 loss was just over 50 million, and in 2023, the

1 loss was almost 33 million.

2 MS. ASAY: Has Blue Cross achieved
3 an adequate CTR in these markets?

4 MS. GREENE: No. As you can see
5 from this exhibit, we have not collected anything
6 close to an adequate contribution to reserves in
7 our premium to support these markets. Over the
8 decade that we've been participating in the
9 markets, you can see we've filed contributions to
10 reserves in -- as low as one percent for many
11 years. It was 1.5 percent until last year, not
12 higher than 2 percent.

13 Our targets have been reasonable
14 and low by national standards. That's the
15 comparisons that L & E has done over the years.
16 But in almost every year, the Board has either
17 cut CTR explicitly or has made reductions to
18 other assumptions within the rates that were not
19 actually supported, so that amounts to the same
20 thing in terms of a reduction to CTR.

21 And we show the comparison of
22 those results in that same table. So as a
23 result, over the last decade, instead of having
24 these markets modestly add to reserves, these
25 markets have actually lost significant -- we've

1 had significant losses that have drained
2 reserves. So in plain English, it means that
3 we've paid that out of -- out of reserves instead
4 of out of premiums.

5 MS. ASAY: Is a cumulative
6 historical CTR then negative new market?

7 MS. GREENE: Yes. The cumulative
8 actual CTR is -1.7. And if you compare the -1.7
9 over 10 years, that means every year cumulatively
10 had a -1.7. If you compare that to the filed
11 contribution to reserve, that should have been
12 supported at 1.6. That -- that gap is huge. If
13 you run the calculations, it's about just under
14 300 points of RBC.

15 MS. ASAY: How -- you've spoken
16 several times this morning about increasing claim
17 costs. Yeah. How do increasing claims costs
18 affect Blue Cross's RBC?

19 MS. GREENE: Increasing claims
20 costs really is the main driver of the financial
21 challenges that we've had because it directly
22 reduces the reserves. It -- when we have a loss
23 that's not supported by premiums, that comes out
24 of reserves. And so the -- I'll describe it as
25 in the numerator, if you will, of the RBC. It

1 just reduces the reserves.

2 MS. ASAY: Are there other ways
3 that increasing claims costs affect the RBC
4 level?

5 MS. GREENE: Yeah. The other
6 significant impact for increasing claims is it --
7 when claims are increasing, it increases the
8 authorized control level or the ACL. This is the
9 denominator of the RBC calculation, and that
10 authorized control level is a reflection of the
11 risk that we have as an insurance company. And
12 as claims go up, that calculation also increases.
13 So the denominator grows, and even if reserves in
14 the numerator stayed the same, RBC would go down.
15 When claims go up at a significant pace, there's
16 an inflationary effect, which just means that you
17 need -- you need a higher CTR just merely because
18 claims are increasing quickly.

19 MS. ASAY: Are there other factors
20 that have contributed to the change in RBC?

21 MS. GREENE: Yes, there are.

22 MS. ASAY: I want to point you to
23 what's been marked as Exhibit 26.

24 And Exhibit 26, just as a reminder
25 for the Board was admitted this morning, but was

1 not in the binder. It's a one-page document.

2 MS. GREENE: Yeah. Yeah.

3 MS. ASAY: What is Exhibit 26?

4 MS. GREENE: Exhibit 26 is a chart
5 that we provided to the Board after hearing last
6 year that decomposes the historical changes in
7 surplus over the years, and we updated that to
8 include 2023.

9 MS. ASAY: Would you please
10 summarize for the Board what Exhibit 26 shows?

11 MS. GREENE: Sure. There's a
12 number of things I'd -- I'd like to point out on
13 Exhibit 26. First, I would draw the Board's
14 attention to the RBC history. You can see that
15 it has been volatile in recent years due to both
16 the factors impacting the surplus or members
17 reserve member reserves and the numerator as well
18 as the ACL. So that's both shown there. The
19 most significant factor driving these changes in
20 surplus is the -- coming back up to the top line
21 of the exhibit, the underwriting gain or loss has
22 to -- that's the line item where we have to see
23 it supporting a modest contribution to reserve.
24 And as you can see, the losses there have been
25 significant, especially in '22 and '23.

1 The other factors impacting
2 surplus, things that I would that we've talked
3 about in past years. We had the COVID pandemic,
4 which temporarily slowed claims payments in 2020.
5 And then when the payments came back in 2021, '2
6 and '3, all of that was run through reserves. We
7 did not put any of that in our premiums. That's
8 what reserves are for, to cushion the impact of
9 those unexpected items. And then there's a
10 series of items on this exhibit. The equity
11 gains and losses will go up and down from time to
12 time, but overall they will cumulatively add to
13 reserves.

14 We have the equity investment in
15 our Vermont Blue Advantage Medicare Advantage
16 business. We launched that business as COVID was
17 getting underway. And that -- that business has
18 also suffered in terms of high claims in the last
19 two years as the medical cost trend has
20 escalated. And then there's the tax law changes.
21 And anyone who's been through these hearings for
22 all of these years like I have, we had large
23 changes in the tax code, and that came through
24 beginning in 2017 and then also added to reserves
25 in 2019 and 2021. And then of course, we've got

1 the pension losses and subsequent recovery of
2 the -- the losses where we were defrauded by
3 investment managers, and we recovered a majority
4 of that through litigation and also with a
5 catalyst for us freezing our pension.

6 So the last thing I'll point out
7 on this exhibit is the ACL that I mentioned
8 earlier. You can see that on the line second
9 from the bottom. And that has grown in the last
10 couple of years significantly. And that is both
11 as a result of membership growth, but also the
12 claims costs supported by that membership growth
13 has grown tremendously, as I mentioned a moment
14 ago.

15 MS. ASAY: In your opinion,
16 Ms. Greene, does the fact that the other factors
17 you've talked about impact RBC? Does that fact
18 undermine Blue Cross' request for a seven percent
19 CTR in 2025?

20 MS. GREENE: No, it doesn't.

21 MS. ASAY: Would you please
22 explain why not?

23 MS. GREENE: The first thing I'd
24 like to say is that I think we need to put the
25 frame on this conversation. In past proceedings,

1 we've talked about the other factors impacting
2 RBC and whether or not that should be attributed
3 or not to the QHP market. But if we flip the
4 frame and say that -- instead of thinking of
5 contribution to reserves or CTR as a problematic
6 add-on to rates, we really should be thinking
7 about it as a critical part to any rate, and it
8 really is not an optional item. And it's really
9 required in order to sustain wages over time.

10 Because of that, I really don't
11 think it's appropriate to look at the various
12 things affecting reserves in total and attribute
13 much of that to the QHP marketplace. But the QHP
14 marketplace has to have premiums that sustain and
15 cover the cost of healthcare, the cost of
16 insurance, and include an appropriate CTR to
17 sustain reserves. The reserves are needed to
18 support the entire Blue Cross enterprise, and all
19 of our -- serve a lot of different market
20 segments, and all of those market segments will
21 go through various stages.

22 And so reserves do have to sustain
23 us through the natural ebb and flow of business
24 results across the entire enterprise. In fact,
25 if you silo reserves, if you think of number

1 reserves in a siloed fashion, you can make an
2 argument that we wouldn't be in these markets at
3 all because the reserves required to grow the
4 business would have to be there in order for us
5 to serve new members. So if we were attributing
6 the reserves just to one market at a time, we
7 would not -- we would not be able to grow the
8 business at all.

9 MS. ASAY: Are there other reasons
10 that justify a seven percent CTR in these markets
11 specifically?

12 MS. GREENE: Yes, there are. I
13 can elaborate a little bit more on this in
14 executive session, but the QHP markets serve --
15 serve to require us to have a disproportionate
16 share of the reserve requirements. So these
17 markets have a relatively high-risk profile, and
18 it really drives disproportionate share. And
19 even if you were to focus solely on these
20 markets, the seven percent is justified because
21 we have such an overwhelming, obvious picture
22 that these markets have contributed to the
23 current financial problems.

24 The difference, as I said earlier,
25 between the -7 percent cumulative CTR and the

1 fact that it should have been providing a modest
2 cumulative 1.5 percent CTR really is significant.

3 MS. ASAY: I just want to clarify
4 one thing. You just said that the cumulative
5 negative CTR again was -- I didn't get the
6 number. I think it's the way it came out.

7 MS. GREENE: Yes. The cumulative
8 negative CTR of 1.7 that we saw on Exhibit 1.

9 MS. ASAY: In the Board's decision
10 last year, the Board reduced Blue Cross' three
11 percent CTR request to two percent, saying in
12 part that the ratepayers in these markets,
13 "should not bear a disproportionate burden." In
14 your view, have the ratepayers in these markets
15 formed a disproportionate burden in contributing
16 to Blue Cross reserves?

17 MS. GREENE: No, to the contrary.
18 As I explained, these markets have been draining
19 our reserves rather than supporting them. We've
20 explained for a number of years that
21 (indiscernible) premium reductions that aren't
22 justified actuarially don't save money, they just
23 push costs onto future years. And we are at a
24 place where we -- we cannot sustain that outcome
25 anymore.

1 Even if you think about the last
2 couple of years with the large losses and the
3 increase in federal subsidies, the decisions made
4 to reduce contribution to reserves or rate
5 assumptions, thinking that that was going to save
6 money, in fact, all that did was push losses onto
7 Blue Cross Blue Shield of Vermont reserves and
8 without even benefiting the individuals that have
9 the subsidies.

10 So I'd like to just sum up the
11 picture to say that we're just at a point where
12 we can't sustain this anymore. To protect our
13 solvency, we need fully funded rates in order to
14 continue to serve Vermonters across all lines of
15 business.

16 MS. ASAY: Thank you, Ms. Greene.

17 Hearing Officer Barber, that
18 concludes the public session portion of Ruth
19 Greene's testimony for today. We do have
20 additional testimony that we would like to
21 proffer in Executive Session. I believe that Ms.
22 Greene gave a factual basis for doing so during
23 her testimony. And if you'd like me to address
24 that further now or later, I'm happy to do that.
25 But otherwise, we have no further questions in

1 the public session at this time.

2 MR. BARBER: Okay. I think now
3 would be a good time to take just a five-minute
4 break, and then we'll come back at 9:20 and move
5 on to HCA cross.

6 UNIDENTIFIED SPEAKER: Do you mind
7 if we make it 10, actually?

8 MR. BARBER: Sure, yeah. We'll
9 see everyone at 9:25 then.

10 UNIDENTIFIED SPEAKER: Thank you.

11 (Recess at 9:15 a.m., until 9:26 a.m.)

12 MR. BARBER: So we just finished
13 the nonconfidential direct of Ruth Greene and
14 turn it over to Mr. Schultheis for any questions
15 he may have.

16 MR. SCHULTHEIS: Thank you.
17 Hi, Ms. Greene.

18 MS. GREENE: Good morning.

19 MR. SCHULTHEIS: So just to kind
20 of set the stage, I'm going to ask you first
21 about a few questions about the dynamic between
22 health insurance premiums and hospital-allowed
23 charge increases. I want to try to avoid, if we
24 can, eliciting confidential information. I trust
25 you and/or your counsel will speak up if we

1 should be talking about anything in closed
2 session.

3 I'm also going to ask you about
4 File 2025 CTR and other BCBSBT books of business.
5 Lastly, just to note, when I'm directing you to
6 pages, I'm referring to the red pages, red page
7 numbers printed on the bottom of the page. So
8 could you turn to Exhibit 19, page 14? So
9 Exhibit 19 is your prefile testimony. Let me
10 know when you are there.

11 MS. GREENE: Page 14. I'm there.

12 MR. SCHULTHEIS: Okay. Do you see
13 the question on line 5, which is about what Blue
14 Cross is doing to improve its solvency position?

15 MS. GREENE: Yeah.

16 MR. SCHULTHEIS: Okay. And if you
17 go over to page 15, which should just be across
18 in the binder, do you see that list of bullets?
19 And it's, I think the first or second -- the
20 first, second -- the second bullet, which is
21 about seeking relief from hospitals that exceeded
22 their ordered commercial rate?

23 MS. GREENE: Yes, I see that.

24 MR. SCHULTHEIS: Okay. So my
25 first few questions are aimed at putting an idea

1 to rest. So I apologize in advance to you and
2 the Board if I'm treading over ground that is too
3 worn. So do hospital -- do Board-ordered
4 hospital commercial charge increases impact
5 health insurance rates?

6 MS. GREENE: Yeas.

7 MR. BARBER: Okay. Do you
8 remember that in previous years, we've heard that
9 ordered hospital charge increases act -- should
10 act as a ceiling?

11 MS. GREENE: Yes, I remember that.

12 MR. SCHULTHEIS: Yeah. So in
13 reality, you ordered hospital charge amounts act
14 as a ceiling?

15 MS. GREENE: I'm sorry. Could you
16 repeat that again? Does it currently --

17 MR. SCHULTHEIS: Sure, Ms. Greene.
18 So in reality, do Board-ordered hospital charge
19 increases act as the ceiling?

20 MS. GREENE: Yes and no. They do
21 act as a ceiling during negotiating and
22 contracting as we go into a year. And I guess I
23 would say no in the sense that we have to monitor
24 after the fact if the mix of services and
25 activities at the hospitals change significantly

1 from the assumptions going into the contract
2 agreement, and sometimes they do change. So
3 there is a -- there is just a natural part of the
4 process of implementing rate increases that
5 sometimes causes things to be higher or lower
6 than what was expected going in.

7 MR. SCHULTHEIS: So the ordered
8 rates, like, start as the ceiling, and you guys
9 negotiate materially different rates, or is it
10 just like a tenth of a percentage here or there?

11 MS. GREENE: Yeah. In reality,
12 it's not a lot different than the ordered rates.
13 The Dr. Weigel can testify some more about --

14 MR. SCHULTHEIS: Yeah.

15 MS. GREENE: -- the details here.
16 But broadly speaking, for many years, the
17 decisions made in the hospital budget arena are
18 very difficult for us to negotiate anything below
19 that.

20 MR. SCHULTHEIS: Okay. Thanks for
21 clearing that up. So I'm going to shift to the
22 mechanics of the regulatory processes for rate
23 review and hospital budgets now. So in rate
24 review, the outcome of rate review is that you
25 get an ordered premium increase and then you

1 implement that ordered premium increase. Right?

2 MS. GREENE: Correct.

3 MR. SCHULTHEIS: Okay. So Blue
4 Cross can't, for instance, because claims are
5 coming in at a higher level than predicted,
6 change the premium midyear. Is that correct?

7 MS. GREENE: That's correct.

8 MR. SCHULTHEIS: Okay. So
9 whatever the ordered premium rate is, is what the
10 premium rate for the year is, regardless of what
11 happens.

12 MS. GREENE: That's correct for
13 these markets, yes.

14 MR. SCHULTHEIS: So can hospitals
15 go over the Board-ordered commercial charge rate
16 or the NPR, I guess?

17 MS. GREENE: Yeah. The
18 implementation of hospital charges, it's, you
19 know, all of the charges for services are unique
20 and different, and not all of those charges --and
21 we've talked about this with the Board in the
22 past, that not all of those charges have applied
23 the same unit cost increases. But the collection
24 of those services through the modeling of the
25 contracting teams, they sort of design that

1 implementation in a way that, you know, both
2 parties believe at that time that it will achieve
3 the -- either the ordered rate or whatever small
4 amount we've been able to negotiate under that
5 rate.

6 MR. SCHULTHEIS: So I'm guessing
7 from your prefile testimony that it actually did
8 happen this year that a hospital went over or at
9 least one or more hospitals went over. Is that
10 correct?

11 MS. GREENE: Yeah. We monitor the
12 hospitals and how it -- how the contracts unfold
13 with actual results, and we do that every year.
14 We've been doing that for a number of years. And
15 sometimes they go higher or lower. Post-COVID,
16 it's been difficult to understand how the mix of
17 services is sort of unfolding relative to where
18 our, you know, sort of typical history would tell
19 us. But we have noticed that there's hospitals
20 that, through the -- the mix of services after
21 the fact, have indeed gone over the rate
22 commitment that they had to us. So we'll be
23 following up with those hospitals.

24 MR. SCHULTHEIS: So thinking back
25 over the last, say, seven years, have overages

1 also happened in the past?

2 MS. GREENE: Overages and
3 underages have happened in the past, and usually
4 in a modest order of magnitude.

5 MR. SCHULTHEIS: So in the last
6 five years, can you remember -- when that
7 occurred and there was an overage, can you
8 remember when a hospital had a substantial
9 consequence or commercial charge overage that was
10 Board-ordered?

11 MS. GREENE: I do not recall any.

12 MR. SCHULTHEIS: Okay. So we're
13 going to switch topics again, and so my last set
14 of questions for you are about contribution to
15 reserves by block of fully-insured businesses
16 business. Has BCBST amended its pending large
17 group unit cost rate filing to change the
18 contribution to reserves from three percent to
19 seven percent?

20 MS. GREENE: Yes, we have.

21 MR. SCHULTHEIS: Okay. And have
22 you done that, or has Blue Cross done that for
23 association health plan filing?

24 MS. GREENE: Yes, we've updated
25 both the large group and the association health

1 plan filings for both the seven percent CTR and
2 the changes that have come through in the QHP
3 rate review related to H.766 and the latest
4 submitted hospital budget. So that -- those
5 updates have been submitted.

6 MR. SCHULTHEIS: And I know it's
7 not Board-regulated, but is -- is the VBA block
8 of business has a contribution to reserve been
9 increased in that?

10 MS. ASAY: So I'm just going to
11 caution that that does go potentially into
12 confidential territory. I think Ms. Greene can
13 navigate what she can say here, but.

14 MS. GREENE: Yeah. So I guess
15 I'll start and then we can go a little deeper in
16 executive session if we need to. The Medicare
17 Advantage business also historically has targeted
18 a three percent CTR, but the reality in that
19 business is that we only entered that market in
20 2021. So there was a five-year financial plan to
21 get to a target CTR because of the cost of
22 entering a new market and building to scale,
23 we -- our business plan for entering that market
24 planned for losses.

25 But in the ongoing sort of when we

1 get to run rate and break even, it will tend to
2 target the same CTR as other lines of business.
3 We -- there is a bid process with CMS at the
4 federal level that supports the Medicare
5 Advantage business. And we can talk more about
6 actions we've taken in that bid process under our
7 current circumstances that are probably better
8 for executive session.

9 MR. SCHULTHEIS: So I'm not sure
10 if this should be in executive session. I'm
11 going to try it anyway, and you let me know if we
12 should have it in executive session. So I think
13 what you said, I think, was that you're going to
14 target the same CTR, the seven percent, that you
15 do in other books of business, but that's not
16 going to be next year. That's going to be some
17 time in the future. Correct?

18 MS. GREENE: Right. That is fair
19 to say. CMS had implemented a number of revenue
20 changes for all Medicare plans nationwide. And
21 when we had to submit a bid, we were unable to
22 achieve the target that we aspire to. But we are
23 definitely working towards that.

24 MR. SCHULTHEIS: Great. Thank you
25 for clearing that up. So those are all my

1 questions for Ms. Greene. And kind of just like
2 Ms. Asay, did I reserve the right to do
3 additional cross-examination of the witness,
4 should we get-go into an executive session.

5 MR. BARBER: Okay. Ms. Beliveau,
6 do you have any questions you'd like to ask Ms.
7 Green?

8 MS. BELIVEAU: I do not. Thank
9 you.

10 MR. BARBER: Okay. We'll move to
11 Board members. The order will go to Board Member
12 Walsh, Murman, Lunge, Holmes, and then Chair
13 Foster. So Board Member Walsh, do you have
14 questions?

15 MR. WALSH: Yes, I do.

16 Thank you, Ms. Greene and Mr.
17 Schultheis. Let me just gather my thoughts from
18 notes for a second, please. I think I'd like to
19 start with questions regarding the uptick in
20 April and May of this year. The first half of
21 2024, claimed surges in April and May. During
22 your testimony, Ms. Greene, you mentioned that a
23 big driver of that was medical facilities, and I
24 was hoping you might explain that a little bit
25 further.

1 MS. GREENE: Sure. I'll comment
2 and also acknowledge that Martine Lemieux is also
3 very familiar with the claims information that
4 we've presented, so she could answer further
5 detailed questions if necessary. But the uptick
6 in April and May of course, when we experience a
7 significant claim surge, especially this early in
8 the year, we immediately -- our response was to
9 immediately dive into that to see where the --
10 where the volumes and rates were coming from.

11 Some of the we -- oftentimes with
12 a surge like that, we can see a pharmacy drug
13 costs going up, but this wasn't the case. It was
14 sort of in line with our expectations. And then
15 it was on the medical side and concentrated in
16 facilities, which means the hospitals and the --
17 including the drugs that are administered in the
18 hospitals. So anecdotally, based on the data
19 that we have been able to see so far, we've seen
20 an uptick in some of the chemotherapies, which
21 is, you know, important life-saving treatment for
22 patients, and also in some of the other types of
23 specialty drugs that are administered in the
24 hospital.

25 So we're urgently following up on

1 that information to understand what might be
2 happening. But yeah, that is again, kind of
3 volume-driven, if you will. And a lot of times
4 with the hospital estimates that we do, we're
5 making estimates for both the unit cost increases
6 as well as the utilization increases. So those
7 facilities activity was a major driver of the
8 April and May surge.

9 MR. WALSH: So thank you for that.
10 It sounds -- if I'm hearing you correctly, it's
11 both an increase in utilization and an increase
12 in unit price.

13 MS. GREENE: Well, it's increase
14 in the utilization of the things that are higher
15 cost.

16 MR. WALSH: Okay.

17 MS. GREENE: Yeah.

18 MR. WALSH: Okay. Oftentimes, I'm
19 used to thinking about this is a combination of
20 utilization, price, and diagnostic intensity.
21 And have you seen any change in diagnostic
22 intensity in 2024?

23 MS. GREENE: Yeah, that is a
24 really good question, if I may, to have you talk
25 with Martine Lemieux about. We typically fold

1 race or how many years --

2 MR. WALSH: In your calculations
3 for setting this year's rate requests, how many
4 prior years are reviewed to create the medical
5 trend?

6 MS. GREENE: Yes. Again, Martine
7 is -- is absolutely a good person to talk to
8 about this, what we've included in the rate
9 filing. We look at the 2023 base year of
10 experience. So anything that has been updated
11 from last year's rates that have to do with the
12 base year experience. And then we look at 2023
13 and 2020 -- how 2024 is running through what the
14 trend looks like and add that into rates. And
15 then we make a projection of what 2025 would look
16 like.

17 When Martine is selecting those
18 rates of increases, medical trends for
19 utilization, et cetera, she has a very
20 disciplined and rigorous process for looking at a
21 number of years. They might look at five years
22 or three years, and they also incorporate
23 anything that they have in their understanding of
24 the experience that would help them understand if
25 there was one-time effects that were affecting

1 those rates.

2 So a good example, a well-known
3 example, is the COVID disruption was hard to
4 understand what normal trends might look like
5 with the disruptive disruption from COVID. We
6 also had a major disruption in relatively recent
7 history with the UVM Health Network cyber-attack.
8 So there's a number of things that the actuarial
9 team look at and review in order to determine
10 what the appropriate trend is. And then that is
11 all reviewed, as you know, by the actuary.

12 MR. WALSH: And so what I'm trying
13 to understand thinking of a trend is, is the
14 medical trend composed of a five-year period, a
15 three-year period, a ten-year period?

16 MS. GREENE: The trend selection,
17 as we call it, is informed by all of those views.
18 And then the trend selection is determined based
19 on the actuarial expertise of -- of the data and
20 the statistics behind it. And I'm sorry if I
21 sound like I'm avoiding questions, but I just
22 want to make sure that there's a clear
23 understanding that the medical trend is -- is
24 clearly part of the actuarial science behind the
25 rate setting.

1 MR. WALSH: Right. And I don't
2 feel like you're trying to avoid anything. I
3 feel like you're trying to clarify, and it's --
4 it's helpful. The medical trend, as I mentioned
5 a moment ago, I tend to think of as consisting of
6 many components but primarily utilization, price,
7 and intensity.

8 And I'm wondering if you could
9 provide us with a sense of, you know, in the
10 opening statement was said repeatedly that unit
11 cost or the price per unit is the largest driver,
12 but I'm wondering if you could be a little bit
13 more concrete. What proportion of the medical
14 trend is driven by price, utilization, and
15 intensity?

16 MS. GREENE: Okay. Well, if I go
17 back to what I said at the beginning of my
18 testimony, I think what I was intending to say
19 was that the overall cost of paying for
20 healthcare for our members is the overriding
21 driver of premiums as well as in recent years'
22 losses because our premiums have not coverage
23 with the cost of paying for healthcare. And to
24 connect back to your question, the -- that cost
25 of healthcare, we make estimates for all of those

1 pieces, the unit cost, the utilization, the
2 intensity, the drug components, new specialty
3 drugs coming on.

4 So we make estimates around all of
5 that, and they are just estimates. And I think
6 the point I was making was that the overriding
7 impact is when those estimates fall short, so our
8 premiums, our approved premiums were not adequate
9 to cover the overall cost of healthcare. So and
10 all that includes all those pieces, the cost
11 trends, utilization and intensity.

12 MR. WALSH: Okay. In a -- well,
13 all three components are increasing the cost of
14 healthcare, which you then payout, and the
15 premiums have not kept pace with the ability to
16 payout. That's the point that I hear you trying
17 to make. Is that -- am I hearing that correctly?

18 MS. GREENE: Yes.

19 MR. WALSH: And what I'm trying to
20 get a sense of, you know, we have in Vermont an
21 access to healthcare problem. And so if we
22 improved access, utilization may go up and it
23 could be justified. Alternatively, prices may be
24 rising, and that may be due to inflation or any
25 number of factors that could drive price.

1 Intensity could be that indeed, Vermonters are
2 sicker, or it could be using new software to
3 find -- to make sure coding is -- accurately
4 captures what's happening in hospitals. And what
5 I'm trying to get a sense of, from Blue Cross'
6 perspective, is one of those items driving
7 healthcare costs any more than the other
8 utilization, price, or intensity.

9 MS. GREENE: Yeah. I do think
10 that it is all of the above. We have very high
11 unit cost increases over the last couple of
12 years. The budget guidance from the Board for
13 this year was 3.4 percent, and that's what we
14 built into our submitted rates and then we've
15 updated that for what we submitted for that.
16 That price has been a driver. We know that
17 utilization trend has gone up because more people
18 are getting care, and that's a good thing. And
19 to your point, it does need to be paid for, so
20 it's also a driver of the increase.

21 And then as I mentioned earlier, I
22 do think intensity is also part of the equation.
23 And it's logical to think with all of those
24 things happening that there's no surprise in some
25 ways that suddenly we're seeing all of these

1 factors come together with an acceleration of
2 claims cost, and our approved premiums have to
3 catch up with that.

4 MR. WALSH: Okay. Thank you.
5 Switching topics a bit. What proportion of the
6 claims paid out by Blue Cross are submitted by
7 entities regulated by the Green Mountain Care
8 Board?

9 MS. GREENE: That statistic I
10 would defer to Martine so that she gives you the
11 accurate statistic. It's a very large portion of
12 that healthcare costs as part of our rates, but
13 she can give you the number.

14 MR. WALSH: Is Martine due to
15 present to us?

16 MS. GREENE: Yes. She'll testify
17 later on the detailed components of the rate
18 filing. So she -- she normally is up first, but
19 this year we're doing something a little bit
20 different. So she will be happy to answer those
21 questions when she testifies a bit later.

22 MR. WALSH: Okay. Right. In the
23 electronic binder that came on Friday using the
24 page number that's -- the page numbering is
25 difficult, but it's page 24, just the 24th page

1 in the electronic binder, 54 percent of claims
2 were from GMCB regulated entities, leaving
3 46 percent from unregulated entities.

4 MS. GREENE: On that page, can you
5 scroll to the page number to the lower right?
6 That's in red and that would tell me what exhibit
7 and page you're on.

8 MR. WALSH: I'll try. Exhibit 1,
9 page 23.

10 MS. GREENE: Thank you so much.

11 MR. WALSH: Yeah, third paragraph.

12 MS. GREENE: Yes. Yes. Yeah.

13 Sorry. This table, Ms. Lemieux includes this
14 table regularly in the actuarial memorandum when
15 we submit the rating. So yes, this is the
16 Vermont facilities and providers impacted by the
17 Green Mountain Care Board hospital budget review
18 of 54 percent.

19 MR. WALSH: And in that same table
20 at the bottom of that page, it appears that the
21 cost trend is rising more rapidly among
22 non-regulated entities. Am I reading that table
23 correctly?

24 MS. GREENE: Yes.

25 MR. WALSH: Thank you.

1 MR. BARBER: Did you have other
2 questions, Thom?

3 MR. WALSH: I'm -- I think I'm --
4 I think I'm looking at my notes, the rest of my
5 questions are for L & E and DFR.

6 MR. BARBER: Okay.

7 MR. WALSH: Okay. Yeah.

8 MR. BARBER: And then Blue Cross'
9 is actually will be testifying in the afternoon,
10 so if you want to get some clarification on those
11 questions you had, I think that'd be a good time
12 to do that.

13 MR. WALSH: Right. Thank you for
14 your time. Thanks for answering the questions.

15 MS. GREENE: Thank you.

16 MR. BARBER: Okay. Board Member
17 Murman, do you have questions for Ms. Green?

18 MR. MURMAN: Yeah, and I -- and
19 I'm sorry (indiscernible).

20 MR. BARBER: Dave, you're break --
21 we're having a --

22 MS. ASAY: I didn't hear you at
23 all.

24 MR. MURMAN: Why don't you do
25 someone else and come back to me?

1 MR. BARBER: Oh, you're good now.

2 MR. MURMAN: Weird. Okay.

3 MS. ASAY: Yeah. We couldn't hear
4 you there for a second.

5 MR. BARBER: Okay.

6 MR. MURMAN: All right. Let's try
7 this again.

8 MS. ASAY: Oh, we can hear you.
9 Okay.

10 MR. MURMAN: All right. Great. So
11 my questions are kind of jumbled together, so if
12 you think they're more appropriate for someone
13 else, would you please just direct me to that
14 person, because that -- I don't know if I quite
15 have these arranged, but I'll try to start with
16 the ones that are specific to your written
17 testimony, and I can work with those. Okay.

18 Just a second. Sorry. I need a
19 different pair of reading glasses to read this.
20 So -- okay. Actually, so a few that are in the L
21 & E memo, but I think they're probably okay to
22 discuss. The L & E memo, Exhibit 12, page 8,
23 there's a bunch of confidential information. I'm
24 not going to address that here. You -- sorry,
25 this is not the L & E memo. This is your

1 response to the Green Mountain Care Board
2 questions, Exhibit 12, page 8. There's this
3 large chart of hospital relative cost. I'm just
4 curious. It says Blue Cross Vermont internal
5 monitoring. I was curious to know the year that
6 that monitoring occurred? The RAND 5.0 data is
7 from 2022.

8 MS. GREENE: Yeah, that is a
9 question that I am unable to answer, but perhaps
10 Dr. Weigel, who's testifying later, or Ms.
11 Lemieux could possibly also?

12 MR. MURMAN: Okay. Okay. On the
13 next page, there's a paragraph at the end there
14 that discusses this sort of concept that
15 hospitals can -- are allowed to increase their
16 rates by the Green Mountain Care Board and then
17 the hospital can then adjust the charge master
18 as -- sort of as they want. And then the
19 relationship with the insurer is to adjust sort
20 of discounts off of those charges. Am I
21 understanding that that process correctly there
22 in the last paragraph?

23 MS. GREENE: Yes. The, you know,
24 certain hospitals, you know, there are some
25 hospitals that are different, but the ones that

1 do have the chargemaster, that is describing how
2 that works.

3 MR. MURMAN: So the way I read
4 that, to me that implies that if a hospital wants
5 to increase their prices on one particular item
6 when that charge master above the Board approved
7 rate, they -- you think they can do that if they
8 can offset that with a lower price increase in a
9 different service; is that accurate?

10 MS. GREENE: That -- that's true.
11 And as I mentioned earlier in response to the HCA
12 question, the -- the contracting teams for both
13 the hospital and Blue Cross look at the
14 expectations for the mix of business. And to the
15 best of everyone's ability, they -- they make
16 estimates as to what that mix will look like and
17 how the mix and the changes among those services
18 will, in the aggregate, come back to the orders,
19 cost increase, or the negotiated cost increase if
20 it's slightly lower in a few rare cases.

21 MR. MURMAN: Okay. Let me back
22 up. So from last year, (indiscernible) -- MS.
23 GREENE: Your audio is breaking up now again.

24 MR. BARBER: Try turning off your
25 video, Dr. Murman.

1 MR. MURMAN: Is there any
2 difference there?

3 MR. BARBER: Yes.

4 MS. GREENE: Yes.

5 MR. MURMAN: All right. I
6 changed -- I passed the mic to a different mic.
7 Okay. So let me know if it stops and then I'll
8 try my video if that doesn't work. Okay. So I
9 was trying to say let's -- backing up a little
10 bit, last year the Board was fairly specific in
11 our orders that we were discussing a change in
12 charge. In prior years, some hospitals used
13 effective commercial rate. Does Blue Cross Blue
14 Shield view those as different things, and if so,
15 how?

16 MS. GREENE: Again, I think Dr.
17 Weigel might be a good person to follow up with
18 on this, but the -- we spent some time last year
19 in hearing -- talking in great detail about how
20 the ordered hospital budgets by the Board kind of
21 flow into the rates, and so we are very much
22 trying to go into each new year with an
23 understanding of how the committed commercial
24 rate will be implemented appropriately. It --
25 you know, consistent with our premium rate

1 assumption. Whether or not the terminology of
2 effective rate or ordered rate, I don't know if
3 that makes a difference.

4 I -- I personally don't have two
5 different of those types of rates and so does the
6 Green Mountain Care Board approved rate is -- was
7 how we think about it. But then Dr. Weigel, who
8 testifies later, is closer to it and might be
9 able to further collaborate.

10 MR. MURMAN: Okay. I guess, so
11 when you went -- from the Blue Cross Blue Shield
12 standpoint, when you read a Green Mountain Care
13 Board budget order, and you go into negotiations
14 with the hospital, I guess what is the definition
15 of rate? Is it -- yeah, I guess I'll leave it
16 there.

17 MS. GREENE: Yeah. It's the
18 published approved commercial rate increase that
19 the Board publishes.

20 MR. MURMAN: And rate is defined
21 by change in charge, change in reimbursement per
22 unit, the amount paid by Blue Cross Blue Shield
23 for the book of business for that specific health
24 plan, what is -- what is the -- what do you mean
25 by published rate?

1 MS. GREENE: So the commercial
2 cost increase is what we're focused on --

3 MR. MURMAN: Okay.

4 MS. GREENE: -- and that is
5 implemented in the way we were talking about.
6 there's also -- well, yeah. It's the published
7 commercial unit cost rate.

8 MR. MURMAN: Published commercial
9 unit cost rate. And so -- and that -- and what
10 is a unit in that?

11 MS. GREENE: Oh, unit costs as --
12 so the aggregate of all the services that that
13 hospital is planning to provide in the coming
14 contract year. The unit cost of all those
15 aggregate services would be limited to that
16 commercial unit cost rate increase.

17 MR. MURMAN: Okay. So would it be
18 fair to say if you had the same number of
19 enrollees in a plan, say 20,000 in '23 and 20,000
20 in '24, and 20,000 FY '25, that you would
21 expect -- if the health of those people didn't
22 change, so the services didn't change, would you
23 expect if the unit cost, say if it went up by 10
24 percent, it would go from -- '22 to '23 would go
25 from -- each year, that -- that group of people

1 would cost 10 percent more to pay for at that
2 hospital?

3 MS. GREENE: True. That --
4 that -- in that example with all those
5 assumptions, that's true.

6 MR. MURMAN: Okay. So if -- as --
7 as Thom Walsh was saying, if the intensity of the
8 services were to increase, that -- to those
9 patients, that would then not be reflect -- would
10 that be reflected in the Board-ordered rate
11 change?

12 MS. GREENE: The intensity and the
13 utilization tend to happen according to the
14 healthcare needs of the population in the year.
15 So, you know, that's an assumption that the
16 actuaries are, you know, looking at all of the
17 historical information and the current
18 information to see what they think that increase
19 would look like. So it's the unit cost trend and
20 then an additional trend for utilization and
21 intensity.

22 MR. MURMAN: Okay. And my
23 understanding, from what I've read and what you
24 just said to -- to Thom Walsh, is that
25 utilization includes intensity in a sense. Is

1 that -- so let me ask that -- go ahead. Yeah.

2 MS. GREENE: So just -- when I say
3 that, I just mean to say in the way we develop
4 rates, we're folding those two -- we look at
5 them, but when they're expressed in the actuarial
6 memorandum, and we put them together. They are
7 different -- clearly different assumptions. You
8 can use -- use more of the same, or you can use
9 more intense services and both things would
10 affect rate.

11 MR. MURMAN: Okay. So if a
12 hospital or a group of hospitals, or providers
13 were to work diligently to try to improve their
14 documentation integrity is the term often used,
15 which would then increase the intensity for the
16 same services provided, but actually, you know,
17 document it appropriately so that that reflects
18 the services provided, can Blue Cross Blue Shield
19 monitor if that's occurring, and if so, how?

20 MS. GREENE: We -- we don't have a
21 lot of granularity to know what would have been
22 coded previously, you know, if there's been an
23 effort. There is a lot of literature written
24 about coding growth, and it comes into play often
25 with our risk adjustment work. So we do have

1 people who are studying the trends there. But
2 we, you know, it could be a dynamic that the
3 intensity has always been there, but the coding's
4 now reflecting it appropriately. That's a
5 possibility as well. But I think the claim has
6 to be paid and the healthcare was provided, and
7 the cost has to be covered by premiums.

8 MR. MURMAN: Yeah. I agree. What
9 I'm trying to understand is say, for instance,
10 within Medicare, which I know that's not what you
11 do, but in Medicare fee for service, there's the
12 case mix index. And so the case mix index is
13 reflected by the documentation. And a higher
14 case mix index basically reflects on a higher
15 payment from Medicare. And there's efforts made
16 to improve the case mix index documentation for
17 a -- for groups of patients such that it reflects
18 the care delivered.

19 In commercial, if the -- if
20 there's a -- if there's the element of price that
21 gets negotiated into this as well, because we're
22 not fixed prices, like Medicare as case mix
23 indexing increases, the equivalent of case mix
24 index within commercial, higher amounts are paid
25 for the same care, which is true with Medicare,

1 but prices have been established over time to
2 support hospital budgets with less rigorous
3 documentation.

4 So there is this nuanced thing
5 that occurs that if no different services are
6 being provided at these high prices, you end up
7 generating more revenue -- hospitals would
8 generate more revenue and thus, cost more than
9 would be expected. And I'm trying to figure out
10 if that could be related to this recent surge
11 that you discussed in your testimony. So is
12 there any sort of -- is that -- do you think
13 that -- is there any indication that that's
14 playing into this cost surge?

15 MS. GREENE: Yeah, we -- I have
16 not done a deep dive to study if in fact that is
17 the case. However, we do -- last year, during
18 the budget -- hospital budget review process, we
19 understood that there was going to be a focus at
20 some of the -- the facilities on the Medicare
21 coding documentation as a way to improve the --
22 the revenue coming through Medicare.

23 And we were concerned to a degree
24 that that would have a sort of a ripple effect
25 that as the process internally was improved to

1 more accurately -- more accurately reflect that
2 diagnosis codes and intensity that it wouldn't be
3 necessarily done for Medicare patients, that it
4 probably would trickle over into commercials. So
5 that -- that is a dynamic that we need to be
6 watching.

7 And to the degree that that
8 occurs, then the experience will become higher,
9 and that does drive some of the trends. So that
10 is part of the overall claims costs that we --
11 our premiums have struggled to keep pace with
12 that increase.

13 MR. MURMAN: So I have a few
14 questions. I'm trying to keep them in order in
15 my head, but I think maybe we'll -- I'm going to
16 sort of divert a little bit, because we got
17 talking about this surge in costs through the
18 spring here. And that -- you said it was -- you
19 broke it out. You said it's most notably within
20 hospitals, and one component of that was
21 expensive therapeutics, expensive chemotherapy
22 agents, for instance. Are there other components
23 of the hospital increase that are outliers?

24 MS. GREENE: We -- based on the
25 data that we have so far, that is the -- one of

1 the things that stuck out. Everything else seems
2 to be with increasing generally, but we continue
3 to look at that.

4 MR. MURMAN: Increasing generally
5 over the forecasted?

6 MS. GREENE: Yeah, sort of the --
7 all aspects of the medical cost. The main take
8 away for the April and May surge is that it was
9 focused more on the medical side and more in the
10 facilities, and not in prescription drug. I
11 think we've had a lot of increases over the last
12 few years, and they're often driven by just
13 escalation in the prescription drugs trend. So
14 my purpose in highlighting that was just to make
15 sure that we -- we understood that it was in the
16 medical category that we were seeing the surge --

17 MR. MURMAN: And do you --

18 MS. GREENE: -- we continue to
19 look at it.

20 MR. MURMAN: Sorry. Go ahead.

21 MS. GREENE: No, that's all I
22 needed to say.

23 MR. MURMAN: Okay. And do you
24 know if that surge is occurring in the 46 percent
25 of the non-Board-regulated entities as well as

1 the 54 percent of the Board-regulated entities?

2 MS. GREENE: I do not know the
3 answer to that question off of the top of my
4 head. I do know that it is happening in the
5 hospitals that typically proportionately have a
6 high share of our overall claims. But again,
7 that is something that Ms. Lemieux could speak to
8 more (indiscernible).

9 MR. MURMAN: Okay. So would
10 she -- do you think she'd be able to give a
11 distribution of that surge if it's happening in
12 specific institutions or?

13 MS. GREENE: Probably not today.
14 If there's something specific that you would find
15 helpful, we can take it as a follow up.

16 MR. MURMAN: Okay. Thanks. Give
17 me a second. I just need to look through my
18 notes here for a moment. Mr. Donofrio said -- I
19 don't know if he's still on or if he would be
20 able to speak now, but the Vermont healthcare
21 costs are rising at unsustainable rates. And I
22 was curious if he has any information of
23 comparison of that he looks at or that you look
24 at compared to other states or regions of the
25 country for comparison. Is -- do you -- does

1 it -- is it your position Blue Cross Blue Shield,
2 and I'm not asking you to speak for him, but for
3 you, Ms. Greene, is it your position that costs
4 are rising in Vermont differently than others --
5 other regions of the country, or do you think
6 this is similar or even trend?

7 MS. GREENE: Well, I will say that
8 the Blue Cross Blue Shield of Vermont management
9 leadership team has been very interested in the
10 materials that the Green Mountain Care Board
11 actually has been publishing around comparisons
12 of Vermont cost to cost nationally, and it does
13 seem based on that information that Vermont costs
14 are higher than many other parts of the country.

15 MR. MURMAN: And does Blue Cross
16 Blue Shield have any other information they use
17 for those comparisons that you think would be
18 helpful for the Board to -- to use or understand?

19 MS. GREENE: Other than the
20 comparisons that we included in the responses to
21 the questions, I would have to defer to the --
22 the team to answer that question.

23 MR. MURMAN: Okay. Thanks. I
24 think I'm getting near the end here. Sorry. I
25 got a little jumbled with different people's

1 questions.

2 Thom Walsh brought up Exhibit 19,
3 page 15, sorry. It wasn't Thom, it was Eric
4 Schultheis that -- we continue to closely monitor
5 hospitals that exceed their commercial rate
6 commitment, and plan to approach them for relief.
7 Can you describe what that relief might look
8 like?

9 MS. GREENE: So the conversation
10 takes the form of us sharing with each of the
11 hospitals that we're talking with, sort of our
12 understanding of how the previous unfolded.

13 And then, you know, the hospital
14 has to look at their own analysis, and our
15 analysis. And so the -- the relief is, sort of,
16 in the context of the committed rate in the
17 contract, to say that there was a commitment made
18 that was exceeded.

19 We calculate, you know, quantify
20 the value of that and talk with the hospitals
21 about either receiving some of that money back or
22 some sort of future contract change, or -- or
23 something along those lines.

24 MR. MURMAN: And is it a process
25 that you've done in the recent years at all?

1 MS. GREENE:: As I mentioned,
2 we've -- we -- the monitoring process we've done
3 in the past, but it was only in recent years
4 where we've been noticing that there was some
5 things that we needed to more deliberately follow
6 up on. Because, you know, an average hospital
7 is -- you know, a typical contract might be over
8 in some years and under in some years. And as
9 long as it kind of evens out over time, and is a
10 modest amount, , there -- there would be just
11 a -- a mutual understanding of that information
12 as it goes into whatever the next year's contract
13 conversations are.

14 But we, you know, this is
15 something that we do regularly, but it was worth
16 mentioning because we have some items that we
17 expect to be following up with.

18 MR. MURMAN: Are there specific
19 hospitals that tend to be continuously under or
20 continuously over -- or frequently under of
21 frequently over the contract allowed amounts?

22 MS. GREENE:: They have a large --

23 MR. MURMAN: We can speak about
24 that in executive session, if needed.

25 MS. GREENE:: Yeah. I think that

1 would -- that would be good. We can also talk
2 with Dr. Weigel , who's testifying as well in the
3 executive session.

4 But it tends to be the larger
5 hospitals, because the larger hospitals -- if an
6 assumption is off, it would throw off a larger
7 variance.

8 MR. MURMAN: I'm actually -- I'm
9 maybe more asking less about the variance from
10 the -- but the trend of being on one side or the
11 other.

12 MS. GREENE:: Yeah. I can say
13 that the trend that you're seeing in a couple of
14 hospitals is that it's been over. But again, the
15 backdrop of post-Covid has made it very difficult
16 to discern, you know, whether or not that is
17 something that is -- I'm sure is an unusual one
18 off because care (indiscernible), or if it's sort
19 of a -- a more fundamental assumption in how the
20 contracting is pulled together.

21 So I'm a little reluctant to call
22 it a trend, because it's -- trends have been very
23 up and down lately.

24 MR. MURMAN: Okay. I appreciate
25 that. I know that you came up first largely to

1 talk about RBC and the -- the crises of the RBC
2 situation at Blue Cross, Blue Shield, and I -- I
3 only -- sorry, I have one question for you
4 related to that, which is does -- Blue Cross,
5 Blue Shield is part of a national Blues, and
6 your -- all your peer Blues around the country.

7 What is the -- do you compare your
8 RBC ranges, you know, barring the state-related
9 goals. But what is the -- what is the peer group
10 RBC range that's acceptable within the -- the
11 national Blues, or is there one?

12 MS. GREENE:: Yeah that's a great
13 question. So the collection of Blues plans in
14 total tend to have a -- a weighted average RBC
15 that is much higher than even our required range.
16 When we spent our required range of 590 to 745,
17 it was relatively low among peer group Blue
18 plans.

19 That said, we also have a well-
20 established monitoring level for blue plans that
21 is 375 RBC. So any blue plan that drops to that
22 level or -- or trends towards that level over a
23 couple of years is often talking with the
24 association.

25 But the vast majority of the blue

1 plans are at RBC levels much, much higher.

2 MR. MURMAN: And are there
3 specific numbers that are used above that 375
4 that Blue Association recommends?

5 MS. GREENE:: In terms of above
6 375, do you mean?

7 MR. MURMAN: Yeah. Like, what's
8 the -- is there a range that they -- that they
9 feel is healthy?

10 MS. GREENE:: Yeah. The -- the
11 Association, you know I won't speak to them --
12 speak for them, but my understanding is that
13 they, like the NAIC, which is the National
14 Association of Insurance Commissioners, recognize
15 that the RBC is set for each entity, and it's
16 unique for the risks taken on by that entity.

17 So I think they would struggle --
18 not the right word, but they would struggle to
19 set one RBC for all Blue plans. So -- and I
20 think L & E commented about that, and certainly
21 the report that was issued when our target range
22 was published. It -- it very much talks about
23 that each company has a unique range that they
24 need to manage within, based on the risk that
25 they write.

1 MR. MURMAN: Okay. I have one
2 more question. It's kind of like almost -- it's
3 a fairly awkward question to ask, but I want to
4 sort of just bring up a common critique of health
5 insurers that I hear -- you know, I'm a
6 physician, and there's, you know, we can -- I
7 get -- here we go, I've got all these, you know,
8 ASEP (phonetic) weekly, these come in my -- my
9 mail on a daily basis.

10 The common critique of insurers is
11 that one of the reasons for growth in healthcare
12 cost in the United States is the profit-seeking
13 behavior of insurance. Whether it's profit
14 seeking in non-profits, or profiteering in for-
15 profits, that's driving up the cost of care; high
16 salaries, big bonuses. I was just wondering if
17 you could discuss your thoughts and address
18 that -- that critique.

19 MS. GREENE:: Sure -- I -- I
20 appreciate the candor. Blue Cross is a not-for-
21 profit company.

22 I think you can see from the
23 information that we've provided in testimony that
24 we are not making loads of money; we are in fact
25 loosing lots of money. We are here to serve

1 Vermonters, and we're focused on serving as many
2 markets in Vermont, full of Vermonters as we can.

3 In terms of large salary and
4 executive pay, our -- our Board reviews that
5 every year, and it's benchmarked against similar-
6 sized companies, and that is shared every year in
7 a report with the Department of Financial
8 Regulations.

9 And I think operating in Vermont
10 on behalf of Vermonters is, in my opinion, very
11 different than what some other markets might be
12 experiencing in terms of how insurance companies
13 might be operating or behaving in their local
14 markets.

15 MR. MURMAN: Great. Thanks for
16 your -- thanks for your testimony this morning;
17 thanks for taking my questions.

18 MS. GREENE:: Thanks.

19 MR. BARBER: Board Member Lunge,
20 do you have questions?

21 MS. LUNGE: Thank you. I do.

22 Thank you, Ms. Greene. Is it okay
23 if I call you Ruth?

24 MS. GREENE:: Yes, please.

25 MS. LUNGE: Thank you. And of

1 course, call me Robin if you like.

2 So I do have a couple of
3 questions. I think, quite frankly, most of mine
4 will be for executive session, because I wanted
5 to ask about some of the redacted areas of your
6 prefile testimony, and also for a little more
7 information on the Medicare Advantage business
8 that we've -- you've talked around a little bit.

9 So in your prefile testimony,
10 which is in Tab 19, on page 5, you indicate that
11 you have active plans to "improve revenue and
12 margin across other lines of business."

13 Could you speak in a little more
14 depth to those plans?

15 MS. GREENE:: Sure. That's page 5
16 of the testimony?

17 MS. LUNGE: Page -- yes. It's
18 page 5, the red page 5.

19 MS. GREENE:: Okay. Thanks,
20 nonetheless, thank you.

21 MS. LUNGE: It's line -- do you
22 need the lines? It's lines 22 and 21.

23 MS. GREENE:: No I'm -- I'm sorry,
24 I was just looking for the reference. The
25 increased revenues and other lines of business,

1 the Board is aware that for many years, we served
2 large clients that are often, due to the
3 competitive market and the process of a request
4 for proposal, or RFP, the rates that we're able
5 to renew and win that business are below the cost
6 of serving those businesses.

7 That said, we -- we have
8 implemented -- because of the need to have all of
9 our market segments pay their way, we have been
10 implementing, and we've been successful, having
11 new types of revenue for services that we do on
12 behalf of the large clients, and they benefit.
13 And then, we share in the savings in a way that
14 adds to the bottom line, and reduces the losses
15 on that book of business.

16 MS. LUNGE: Thank you. Would
17 that -- would that -- and if, again, if this is
18 executive session, please just let me know, and
19 I'll save it. Would that include, for example,
20 state employees, teachers, and -- as large
21 clients that you bid for?

22 MS. GREENE:: It would be all of
23 the large clients that we bid for, and each of
24 those contracts is somewhat unique. And we can
25 into more detail in executive session if

1 required. But each -- each client relationship
2 has, you know, some of those relationship utilize
3 our pharmacy, PBM; others do not. And so each
4 circumstance leads us to a different set of
5 levers to talk about with those clients.

6 MS. LUNGE: Thank you. So on
7 page -- so if you could turn to pages 14 and 15
8 of your pre-file testimony in tab 19?

9 MS. GREENE:: Sure.

10 MS. LUNGE: So on the top of page
11 14, there's a chart that shows a comparison of
12 member months to capital requirements. Do you
13 see that?

14 MS. GREENE:: I do.

15 MS. LUNGE: Okay.

16 MR. BARBER: Robin?

17 MS. GREENE:: I believe that
18 particular chart is redacted. It's hard to see,
19 there's a blue --

20 MS. LUNGE: Oh, oh, oh; thank you.

21 MS. GREENE:: -- blue line under
22 it.

23 MS. LUNGE: Okay.

24 MR. BARBER: Yeah.

25 MS. LUNGE: Got it, thank you.

1 I'll save it. I didn't notice the line around
2 it, so I appreciate that -- pointing that out.

3 MS. GREENE:: No problem.

4 MS. LUNGE: Okay. So I'll come
5 back to that. Lower down on that same page,
6 there's a reference to Medicare supplement
7 products and the premium increases in 2025.

8 We don't regulate, as you know,
9 Medicare Supp, so I had a couple questions about
10 the filings there. Do you have an RBC or a CTR
11 contribution -- I'm sorry, a CTR contribution
12 in -- in Med -- Med Supp plans?

13 MS. GREENE:: Yes we do, and
14 it's -- historically, it's been the same as our
15 other insured businesses and we will be seeking
16 seven percent on that rate as well.

17 MS. LUNGE: Okay, thank you. That
18 was my question.

19 And then on page 15, in the fourth
20 bullet down, you indicate that you're seeking a
21 number of formulary changes, or you're
22 contemplating a number of formulary changes. How
23 frequently do you form -- do you typically do
24 formulary changes?

25 MS. GREENE:: Yeah. We have to

1 watch formularies constantly because of the --
2 the way the pharmaceutical industry shifts, and
3 our PBM helps us keep up with that.

4 We make formulary changes
5 typically twice a year, and they both -- both
6 cycles require some very disciplined
7 communication and advance communication to
8 members impacted, et cetera. It's usually changes
9 that come with the -- the turn of the calendar to
10 January, and then there's usually a change --
11 well, there might be a change midyear. We don't
12 have to do them twice a year, but if there's a
13 need for a change, we can do them midyear with
14 the appropriate notice.

15 MS. LUNGE: Okay, thank you. So
16 what -- in terms of doing something differently
17 from normal related to the RBC range have you
18 been contemplating with formulary changes? Or is
19 this just your normal review?

20 MS. GREENE:: Yes. Well I think
21 normal -- it's hard to describe what normal would
22 be, but because the pharmaceutical company -- or
23 pharmaceutical companies have a lot of drugs that
24 are moving through approval, and some of them are
25 brand, and some of them are generic, et cetera, a

1 lot of times, the formulary changes are related
2 to moving drugs between tiers because, for
3 instance, maybe a biosimilar has -- has come out
4 and been accepted by the medical community as
5 a -- a replacement drug. And that might be
6 significantly more cost-effective option. And so
7 working with our PBM, we would -- we would be
8 watching that, and making those types of changes.

9 I would say we would do that on a
10 regular basis. And then, you know, depending on
11 what's going on with FDA approvals, et cetera,
12 there may be years where there's more changes,
13 and there might be years where there's less
14 changes.

15 MS. LUNGE: Okay. All right. So
16 I'll just ask one more time, how is that
17 connected to using towards the ordered range?

18 MS. GREENE:: Right. So if --
19 when we develop the rates for 2025, we have to
20 make certain assumptions about the cost of
21 medical care and the pharmaceutical care, and it
22 assumes certain formulary. So what we're doing
23 here is saying okay, we have to keep working that
24 lever, and if we find an opportunity to make a
25 change that find we can make, and can make it

1 midyear, that -- for the half year that that's
2 implemented, that would fall -- because the rates
3 have been set for that year, that would fall to
4 RBC. But then, the cost improvement in those
5 changes would fall into next year's rate --
6 premium rating because it comes in as part of
7 experience.

8 So it's -- it kind of related to
9 the timing, and we just know we have to not wait
10 until the following year to make that happen.
11 And especially under today's circumstances, we
12 don't want to leave any money on the table, so to
13 speak, to have those changes happen.

14 MS. LUNGE: Okay, thank you. On
15 page 17 of your prefile testimony, you talk a
16 little bit about this affiliation with Blue Cross
17 Blue Shield of Michigan. And I'll give you a
18 moment to get there.

19 MS. GREENE:: I -- on page 17 of
20 Exhibit 19?

21 MS. LUNGE: Oh, I apologize, page
22 18. Sorry, I was looking at the -- the wrong
23 page number.

24 MS. GREENE:: Yep.

25

1 MS. LUNGE: Okay. Thank you.

2 MS. GREENE:: No I -- I see the
3 questions you're referring to now.

4 MS. LUNGE: Thank you. So I know
5 that you have been speaking with them about
6 transitioning your technology and systems and
7 expect, as you note here, to forgo substantial
8 expenditures on technology. Could you please --
9 do you have a quantification of that, and also
10 could you give us an update on when you expect to
11 transition your technology and systems?

12 MS. GREENE:: Sure. So the -- the
13 way to think about the forgoing substantial
14 expenditures is one of the challenges that we
15 have operating as a small, locally-focused
16 Vermont company, is that we lack the resources to
17 invest in some of the newer technologies.

18 And examples might be the data
19 technologies that are required to back some of
20 the -- the member and provider-facing services --
21 portals and -- and apps, et cetera.

22 So we have not been able to keep
23 pace with those technologies because it requires
24 a -- a large investment. So that is, in fact,
25 one of the large drivers behind our seeking an

1 affiliation. We wanted to affiliate with a
2 company who has significant capabilities in that
3 space. And they've already built them, so we
4 don't have to start from scratch and build those.

5 The thing that is -- needs to be
6 clear is that those costs are costs we're going
7 to avoid. So they -- we could not put them in
8 premiums because our marketplace really can't
9 afford the large investments. So what we'll do is
10 be able to access those capabilities, pay
11 something, you know, reasonable to have access to
12 those capabilities, and forgo coming to -- do the
13 first-dollar investment is what we say.

14 In terms of timing, we are working
15 through the planning for that because the
16 affiliation was approved last fall. We have been
17 taking inventory of the more, you know -- the
18 more detailed technologies and figuring out what
19 order, and where do you start, and how do you
20 build on that. And that planning is continuing
21 into this year. We do expect to understand what
22 the -- the order intake will look like, and it
23 will happen over a number of months or years as
24 we work through that.

25 But it should begin soon, in terms

1 of the Vermont technology being able to take
2 advantage of some of the -- the Michigan
3 capabilities -- perhaps as soon as soon as next
4 year.

5 MS. LUNGE: Would you expect that
6 some of the technology would help with cost
7 containment?

8 MS. GREENE:: I would expect that
9 some could help with cost containment. More
10 likely, and this is what we see all the time, is
11 often when you want to implement a new program,
12 whether it's a -- for example, say a pharmacy
13 benefit management program or a medical
14 management program, you would quite often --
15 working with tools and vendors that are cost
16 prohibitive. And so we're looking for both some
17 efficiencies as well as being able to input --
18 cost effectively implement programs that up to
19 this point we haven't been able to do so in terms
20 of technology and tools.

21 MS. LUNGE: Okay. Thank you.

22 I think everything else I have is
23 for executive session.

24 MR. BARBER: Okay. Board Member
25 Holmes?

1 MS. HOLMES: Great, thank you.

2 Thank you, Ms. Greene. I guess I
3 just first want to acknowledge I recognize it's a
4 tough year to come before the Board. It's also a
5 tough year to sit on the Board.

6 MS. GREENE:: Yes.

7 MS. HOLMES: Yeah. It's just a
8 tough year all around. So actually -- some of my
9 questions have been asked and answered. That's
10 helpful. A few I think I still have for
11 executive session.

12 I think I'm just going to put in a
13 request that -- for two follow-ups that --
14 because of questions that I've heard already, the
15 questions that I had. So maybe just putting in a
16 request for the two -- two things.

17 One is how the higher-than-
18 projected medical facility utilization is
19 distributed across both Vermont, and border New
20 Hampshire hospitals. So expected utilization, you
21 know, the excess utilization, basically by
22 hospital, I think, would be -- probably answer a
23 lot of our questions. And I would -- if it's
24 possible, I'd like to include those New Hampshire
25 border hospitals were a lot of Vermonters get

1 their care.

2 And then the second follow-up
3 question is whether or not it would be possible
4 to get that historical breakdown -- historical
5 five to seven years, I don't know, something like
6 that. of the overage or underage of commercial
7 rate commitments again by hospital. And then
8 whether relief for overages were granted, if you
9 have that. I think that might be helpful to all
10 of us.

11 MS. GREENE: Yep.

12 MS. LUNGE: Or at least I'll say
13 to me, but I'm guessing from the questions of my
14 prior Board members, it might help us. And if
15 somebody wants to amend or add something to that,
16 I -- we -- you know, we can get to -- but I think
17 that would be helpful to us. I think we're
18 really trying to understand what's been happening
19 at the hospital level, since as you know, we
20 regulate the hospital level. And so it's helpful
21 for us to hear from your viewpoint what's
22 happening with overages, and -- and how what we
23 think we're doing in hospital budget decisions
24 are translating into what actually happens on the
25 ground. So those are my two requests.

1 And then I have just a couple
2 questions at this point. One is I'm trying to
3 understand a little bit better the relationship
4 between membership size and RBC. So in
5 particular, looking at the -- there's been, like,
6 about a 40 percent growth in QHP members on the
7 individual market between '22 and '24. So I'm
8 wondering how has that impacted RBC.

9 MS. GREENE: Yes. The -- the
10 growth in individual QHP has impacted RBC through
11 that authorized control level calculations. So
12 the additional membership and the claims that
13 they -- the estimated claims that they bring
14 inbound, serves to increase the authorized
15 control level, which then means we need more
16 surplus or member reserves in the numerators to
17 sustain our weekly.

18 Some of that growth came from the
19 Medicaid redetermination. So that was another
20 thing that happened somewhat uniquely over the
21 last couple of years. Because during COVID,
22 the -- my understanding is that the State could
23 not remove anyone from the Medicaid roll.

24 So after a certain period of time,
25 I'm forgetting exactly when it started, but they

1 had to recertify all of those people, and renew
2 it from some of the qualified health plan
3 individuals who had come to us. And so that was
4 the source of some of that growth. But yeah,
5 hopefully that answers both questions.

6 MS. HOLMES: Yeah. Well, I guess
7 I'm also then trying to think about the rates
8 that you're requesting this year are -- are
9 substantial, that's an understatement, or high.
10 And I'm wondering if there's been an analysis of
11 the impact of these particularly high written
12 requests on expected membership, which would
13 likely decline, or potentially could decline.

14 These are going to be -- I will
15 use the term "unaffordable" for some people. I
16 know there's lots of ways that we're trying to
17 define affordability, but there are going to be
18 able to absorb these rate increases. And so I'm
19 wondering if you've done -- if Blue Cross Blue
20 Shield has done an analysis on the expected
21 reduction in membership as a result of the rate
22 increases and then how that will impact RBC.

23 MS. GREENE: Yeah, that's a --
24 that's a great question. So first and foremost,
25 we need to ensure that the premium rates for the

1 membership that we have and expect to renew are
2 fully funded and include sufficient RBC -- or
3 sufficient CTR to support our RBC recovery.

4 You're right, though. With such
5 high increases, and not a lot of choices. People
6 don't have a lot of choices on what to do if they
7 can't afford Blue Cross' increase. We do expect
8 that we might lose some membership.

9 And the impact of that loss of
10 membership in the short run will -- will help
11 relieve some pressure on RBC; you're absolutely
12 right. But it is -- it is not the way that we
13 would, sort of, sustainably repair the RBC
14 levels, given that ultimately we need to have
15 a -- an ongoing and continuing presence in the
16 market to provide coverage to people who want
17 Blue -- Blue network coverage.

18 So yes, it will -- we can
19 estimate -- we know that some of the modeling,
20 maybe a little some, is if you were to lose as
21 much as 25,000 members as a result of this,
22 that's a huge number, that would serve to
23 increase RBC by 100 percentage points.

24 So it would take a lot of
25 membership losses to, even in the short-term,

1 right the RBC ship. And certainly the
2 sustainability has to be grounded first in the
3 premiums to -- to cover the estimated -- the cost
4 of healthcare, cost of insurance, and CTR. So
5 that is a dynamic that, frankly, we might have
6 masked some of the underfunded premium dynamic in
7 past years, because when we lose membership,
8 those RBC have a little bit of a benefit going on
9 there. But overtime, we need to fully fund a CTR
10 that sustains the RBC.

11 MS. HOLMES: Thank you. No, and I
12 understand that. Is there an estimate of the
13 expected membership levels for the independent
14 and some -- individuals, sorry, and the small
15 group market, as a result -- if the Board were to
16 approve the rates in full?

17 MS. GREENE: Yes, so --

18 MS. HOLMES: Is there expected
19 membership numbers?

20 MS. GREENE: Yeah the -- the rate
21 filing itself, and I might Ms. Lemieux when she
22 testifies. She can point you to where that is in
23 the binder.

24 MS. HOLMES: Okay.

25 MS. GREENE: The rates by, like --

1 MS. HOLMES: That's -- so that's
2 inclusive of that?

3 MS. GREENE: Right.

4 MS. HOLMES: Okay.

5 MS. GREENE: Well it's -- I would
6 say with the additional seven percent CTR, those
7 estimates are probably high.

8 MS. HOLMES: Okay.

9 MS. GREENE: Because we made those
10 estimates with the original filing if that make
11 sense.

12 MS. HOLMES: No that makes a lot
13 of sense, I was wondering if there -- if there
14 was going to be an adjustment based on the
15 updated rate requests. So maybe when Ms. Lemieux
16 can -- testifies this afternoon, maybe we'll hear
17 more about that. That would be fantastic.

18 And my next question really, and
19 I'm just going to make this my last question, is
20 trying to understand -- with all of the hospital
21 and insurance price transparency data that's
22 readily available on the internet as a result of
23 the federal changes over the past few years, I'm
24 wondering if Blue Cross Blue Shield has done any
25 analysis of how the negotiated rates at Vermont

1 and border New Hampshire hospitals compare to the
2 negotiated rates of the larger out-of-state
3 insurers like United Healthcares, the -- you
4 know, the Aetnas the Cignas.

5 Whether you're looking at the
6 hospital based websites, or the carriers'
7 websites, I'm wondering if -- if you've all done
8 an internal analysis to see if the negotiated
9 rates at our hospitals and our border hospitals,
10 how they compare.

11 MS. GREENE: Again, this would be
12 a good topic for Dr. Weigel to comment on more --
13 in more detail. But I do know that we're looking
14 at the same data that everyone else is looking
15 at, especially as it relates to some of the
16 bigger hospitals and what the -- what our most --
17 or close competitors are for the business in
18 Vermont, and how our rates compare to their
19 rates. I -- I've been involved with a few follow-
20 up conversations around that dynamic, so I know
21 it's occurring. But in terms of the extent of it
22 and any conclusions from it broadly, I would have
23 to defer that to my colleagues.

24 MS. HOLMES: Okay. Then a
25 foreshadowing of my question to come. Okay. I

1 will leave it there. Thank you very much, I
2 appreciate it.

3 MR. BARBER: Chair Foster?

4 CHAIR FOSTER: Just a couple of
5 questions.

6 Ms. Greene, you spoke about
7 hospitals exceeding the commercial rates approved
8 by the Board, can you give us a sense of the
9 magnitude of that for last year?

10 MS. GREENE: For 2023, we had at
11 least one hospital that -- the calculation -- by
12 our calculation, and this is yet to be reviewed
13 by the hospital, but our calculation is as high
14 as 10 million dollars that the -- that is
15 somewhat of an outlier, hence, the reason why
16 it's on my list of follow-ups, since that data is
17 somewhat a new circumstance.

18 But -- but they are significant
19 enough to (indiscernible) resources in pursuing.

20 CHAIR FOSTER: And in 2023, was it
21 just one hospital, or were there others?

22 MS. GREENE: There were other
23 hospitals. I don't recall exactly how many.
24 Some hospitals were -- were over, but by much
25 smaller amounts.

1 CHAIR FOSTER: And was 2023 an
2 outlier in terms of the magnitude of overage?

3 MS. GREENE: As I mentioned
4 earlier, 2023, from our perspective, was an
5 outlier. 2022 also had variances to the
6 contracted commitments. But again, it was
7 difficult with all of the post-COVID claims
8 processing to know how much of that was, sort of,
9 just unique for that year, or if it was a trend
10 that needed to be pursued. But that's part of
11 what we're currently working through at the
12 moment.

13 CHAIR FOSTER: Could you send us a
14 chart of each hospital that had an overage in the
15 last five years and by the amount of money
16 please?

17 MS. GREENE: Yep. I believe
18 that's similar to what Board Member Holmes, so
19 five year overages and underages by hospital.
20 Yep.

21 CHAIR FOSTER: Yes please.

22 MS. HOLMES: And also just --
23 sorry, just to add, and whether relief was
24 awarded or not? Or given or not?

25 MS. GREENE: Right I have that on

1 there. If relief was granted, yep. Will do.

2 CHAIR FOSTER: Has Blue Cross ever
3 notified the Board of these overages before --
4 before this year? I mean I know I had a
5 discussion with somebody at Blue Cross at one
6 point about this. But prior to this year, was
7 the Board being notified in real time of
8 overages?

9 MS. GREENE: I am not aware that
10 we have been notifying on a regular basis. I
11 know, through the rate review process last year,
12 we provided a lot of information around -- I
13 remember those very detailed charts that were
14 hard to read, but we've provided a lot of
15 information around what -- what the commercial
16 rates were, and then what we actually saw by
17 hospital by year for a number of years.

18 So we've provided various
19 information through different parts of the
20 dialogue, but I don't think we've provided that
21 on a regular basis in a -- what you might
22 describe as a real-time basis.

23 CHAIR FOSTER: How much RBC does
24 \$10 million translate to?

25 MS. GREENE: Ten million dollars,

1 our rule of thumb is .3 for a million. So that's
2 30 percentage points, but you might want to check
3 my math. Sorry.

4 CHAIR FOSTER: Yeah, okay.

5 MS. GREENE: Thirty-three.

6 CHAIR FOSTER: I thought I
7 recalled last year seeing -- there's a chart that
8 you -- you all provided with the amount of rate
9 increase that was negotiated with -- between Blue
10 Cross and hospitals.

11 Has Blue Cross ever negotiated
12 with a hospital for a rate increase that exceeds
13 the Green Mountain Care Board's approved cap?
14 I'm not talking about, like, through overages
15 based on allocation of rate --

16 MS. GREENE: Yes.

17 CHAIR FOSTER: -- but an actual
18 overall. Has Blue Cross ever negotiated a rate
19 above what the Care Board capped it at?

20 MS. GREENE: If we have, it's very
21 rare, and I will again defer to my colleagues to
22 answer the question factually. I -- I do know
23 that there's circumstance from time-to-time
24 where -- and I hear from our contracting people
25 that this particular hospital -- we were able to

1 achieve something better than what was in the
2 order, but it -- it usually has some -- some
3 circumstance related to it that's unique to that
4 hospital. Not so much that -- I think we've
5 shared with you over the last year, and maybe two
6 years, what we've asked for in our negotiations,
7 and what we would have gotten. And those results
8 have been shared with you in a tabular form. So
9 I don't have that knowledge here as I sit her
10 today.

11 CHAIR FOSTER: I -- I recall that.
12 What -- what would be the kinds of circumstances
13 where Blue Cross would agree to give a hospital a
14 rate increase that exceeds the Green Mountain
15 Care Board's cap?

16 MS. GREENE: I'm sorry. I thought
17 you were saying below the cap, but something that
18 exceeds the cap?

19 CHAIR FOSTER: Sorry let -- let me
20 back it up, yeah.

21 MS. GREENE: Yeah.

22 CHAIR FOSTER: By -- yeah. Has
23 Blue Cross ever negotiated a rate with a hospital
24 above the cap that the Care Board approved with
25 the hospital?

1 MS. GREENE: I'll have to defer to
2 the report that we sent you. And I will have to
3 dig that out and look at it, and see if there
4 were any.

5 (Court Reporter and parties confer
6 on audio technical difficulties.)

7 MR. BARBER: So Chair Foster, if
8 you want to pick things back up.

9 CHAIR FOSTER: Just a couple
10 others.

11 Ms. Greene, the Green Mountain
12 Care Board's hospital commercial rate approvals,
13 can you explain how those are applied to hospital
14 administered drugs?

15 MS. GREENE: Hospital-administered
16 drugs are part of the medical services in the
17 contract. So those would be part of the overall
18 contracting agreement. Whether or not the drugs
19 are part of the commercial rate increase itself
20 or some other benchmark I -- I will have to take
21 that back. That's a good question. I just can't
22 speak to it directly.

23 CHAIR FOSTER: It sounded like --
24 I think it was from Dr. Weigel's testimony --
25 written testimony, that Vermont has the most

1 expensive hospital-administered drugs in the
2 United States of America, and I was trying to get
3 a sense of how and when that happened. If you
4 can speak to that at all?

5 MS. GREENE: I -- I cannot speak
6 to that. I think that would be appropriate for
7 Dr. Weigel to speak to.

8 CHAIR FOSTER: Then the risk pool
9 on the QHP market, could you speak generally to
10 how the risk pool in the QHP market compares to
11 the risk pool for the non-QHP market?

12 MS. GREENE: In a -- broad sense I
13 think that they --

14 CHAIR FOSTER: That's --

15 MS. GREENE: I'm hearing an echo
16 now, sorry.

17 CHAIR FOSTER: That's fine.

18 MS. GREENE: Okay. In a broad
19 sense, because the QHP premiums, especially on
20 the individual side, are -- you know, you know
21 among some of the highest. I would say that
22 the -- the risk pool in that (indiscernible) is
23 higher than some of our others. We also know that
24 small groups have a lot of choices in the
25 marketplace. So oftentimes, if they have more

1 unhealthy people or higher claims, they will end
2 up in the QHP risk pool. But I do think that
3 the -- the large employers often will have a
4 bigger population with a larger variety of age
5 groups, et cetera, that changes the risk pool.

6 But I -- as I said here today, I
7 couldn't give you a specific statistic between
8 the risk pools. That is something that we
9 certainly could follow up on.

10 CHAIR FOSTER: Yeah I'm trying to
11 understand why the QHP markets go up so, so, so
12 significantly, and painfully as you all have
13 appropriately recognized. This is simply
14 painful; it's just painful. And I don't really
15 know what best to do about it. So I'm trying to
16 understand as best I can what is going on. And
17 I'm pinpointing that perhaps the risk pool is
18 part of it, which would be a bit of an unintended
19 consequence and that we have community rating,
20 and it's actually driving people who have worse
21 conditions to a QHP market that's far more
22 expensive. That's a concern.

23 MS. GREENE: So we -- yeah no,
24 I -- I absolutely agree this is painful for
25 everybody. We've got to figure this out for

1 Vermonters. I think the -- the large group manual
2 rate increase I think is in the high teens, we
3 just have a percent of CTR, but they will also --
4 the large groups will -- insured large groups
5 will also pay based on their experience. So if
6 they have extremely high claims, they will have
7 very high increases. Even the self-funded
8 employers -- I can speak to Blue Cross as an
9 employer, we've experienced significantly higher
10 claims in the last couple of years, and I would
11 expect to have equally higher claims experienced
12 because of the utilization and that intensity,
13 and the -- the declining health status of
14 Vermonters.

15 So I -- I do think that
16 (indiscernible) are high teens, 20 percent, even
17 before the seven percent CTR. All of these are
18 experiencing, in my view, pretty consistent high
19 increases.

20 CHAIR FOSTER: You're anticipating
21 my question. The self-funded plans, the rate
22 increases on the self-funded plans, can you speak
23 directionally to how they compare to what we're
24 seeing in these QHP rate increases?

25 MS. GREENE: So the -- when we

1 talk about rate increases for self-funded plans,
2 I speak about their, sort of, claims cost
3 increases, which is something that they have to
4 plan for, because they're covering the claims.

5 But the claims projections that we
6 would be providing those plans are also very,
7 very high. For example, all the teachers have
8 had very high increases in the last few years in
9 part for the claims trends that we've been
10 speaking about today.

11 CHAIR FOSTER: Okay. And maybe
12 this is for follow up, but in terms of the claims
13 surge, I think you had said this to somebody
14 else, but you're seeing it really isolated at
15 hospitals, not at non-hospitals; is that right?

16 MS. GREENE: Right. For -- for
17 those two months, which -- because claims are
18 not, you know, they don't happen instantaneously
19 and then we see them, we're still seeing some of
20 the April and May claims come through. So as we
21 learn more and more about that, we'll -- we'll be
22 able to see what further trends there might be
23 there.

24 CHAIR FOSTER: And do you have any
25 ability when you review that information to

1 determine whether or not it's -- I don't know the
2 right way to phrase it, but a desirable increase
3 in excess. Are we talking -- is there a way to
4 distinguish between inappropriate care or
5 unnecessary care versus a surge that is something
6 that is desirable and that the access gates have
7 opened up somewhat.

8 MS. GREENE: Yeah the -- the
9 number of moving parts makes it really difficult
10 to really understand to a granular level the
11 cause and effect. But we do -- you know, our --
12 our staff at Blue Cross who review the claims and
13 look for the -- the waste and abuse from the
14 things that might be, you know, habitual coding
15 inaccuracy, or something like that. Those have a
16 longer tail on them and a lot of times we don't
17 see those patterns until that team had a chance
18 to really look through things.

19 But certainly, the dynamic that
20 Board Member Murman mentioned about the
21 increasing the documentation at some of the
22 hospitals, resulting in potentially additional
23 claims for the additional intensity is something
24 that again we -- we have a difficult time seeing
25 what would have happened had they not been doing

1 that. So whether that's new intensity, or
2 previously undocumented intensity, it's hard for
3 us to tell the specifics in that area.

4 CHAIR FOSTER: All right, thank
5 you.

6 I have no other questions. I
7 appreciate it.

8 MR. BARBER: Bridget, do you have
9 any redirect?

10 MS. ASAY: Yes very briefly, thank
11 you.

12 Ms. Greene, there was some --
13 there was a question from a Board member earlier
14 about the definitive costs, including salaries.

15 Are there any benchmarks that Blue
16 Cross uses for executive salary?

17 MS. GREENE: The --

18 MR. BARBER: Can I just -- I'm
19 sorry. Can I just interject and just ask folks
20 to just speak up? I'm having a little trouble
21 hearing.

22 MS. GREENE: Sure.

23 MS. ASAY: Absolutely. Should I
24 repeat the question?

25 MR. BARBER: No I think I got it.

1 It's just -- it's just on the edge.

2 MS. ASAY: Okay.

3 MS. GREENE: Yeah. The executive
4 committee of our Board does review the executive
5 compensation against benchmarks, and they use an
6 external consultant. I believe it's
7 SullivanCotter that does the benchmarking for the
8 Board.

9 MS. ASAY: I just want to point you
10 to -- I'd like to point you to Exhibit
11 16, which is the DFR report. Page 1 on
12 Exhibit 16.

13 MS. GREENE: I'm there on page one
14 of Exhibit 16.

15 MS. ASAY: Right. So in the 3rd
16 paragraph, I think we discussed this earlier, and
17 you testified that this letter states that Blue
18 Cross has triggered a company action level event.
19 Do you see that?

20 MS. GREENE: Yes.

21 MS. ASAY: And do you see that in
22 the next paragraph the reference to Blue Cross
23 developing and providing DFR with a risk-based
24 capital plan to identify corrective actions?

25 MS. GREENE: Yes.

1 MS. ASAY: Would you please
2 summarize for the Board what the most important
3 action of that plan is?

4 MS. GREENE: Yes. As part of the
5 corrective action plan, the number one most
6 important aspect is to achieve fully funded rates
7 in all of our insured lines of business,
8 including a seven percent contribution to
9 reserve. That is the headline of that corrective
10 action plan.

11 MS. ASAY: All right.

12 I have nothing further for the
13 witness at this time, until the executive
14 session.

15 Thank you, Ms. Greene.

16 MR. BARBER: Thank you.

17 Eric, any cross on that?

18 MR. MURMAN: No further questions,
19 Chair Barber.

20 MR. BARBER: Then, I think we're
21 ready to let Ms. Greene go for the moment and
22 move onto the witnesses for Department of
23 Financial Regulations.

24 So Jesse and Commissioner Gaffney,
25 are you with us?

1 MR. GAFFNEY: Here, Mr. Chair.

2 MR. LUSSIER: And this is Jesse.

3 I'm here. Can you hear me okay?

4 MR. BARBER: Yes. I can hear you
5 just fine. Thanks.

6 Are you ready to take the oath?

7 MR. GAFFNEY: Yes.

8 MR. LUSSIER: Yes.

9 MR. BARBER: Okay.

10 Whereupon,

11 MULTIPLE PARTIES,

12 witnesses called for examination by counsel for
13 the Board, were duly sworn, and was examined and
14 testified as follows:

15 MR. BARBER: Okay. Then take it
16 away, please.

17 MR. GAFFNEY: Thank you, Madam
18 Chair, and thank you, Board. Kevin Gaffney,
19 Commissioner to Vermont Department of Financial
20 Regulation.

21 I guess I want to first outline
22 kind of DFR's primary role as the solvency
23 regulator, and kind of the special responsibility
24 we have as it relates to Blue Cross Blue Shield
25 of Vermont -- I'll probably refer to them as

1 either Blue Cross or the company in other
2 references -- which was created in statute and
3 subject to a comprehensive regulatory oversight.

4 And you know, our general
5 authority and role here is about solvency.
6 It -- and you know, our general mission as
7 regulators in -- in all of our markets, is to
8 protect consumers and make sure there's market
9 availability.

10 And we -- we're coming to a point
11 in time, and it's -- I'm not going to be
12 redundant here, but just to say that we're not in
13 a -- kind of a -- a regular condition here as we
14 review these -- the solvency of this entity that
15 we regulate. And really, it's -- it's about now,
16 the ability of a company to kind of deliver on
17 its financial obligations and its future
18 solvency.

19 And when we look at the trends, we
20 felt it necessary to engage with Blue Cross
21 and -- and talk through and -- and start to begin
22 the plan that's already been discussed a couple
23 of different times. For reasons that we'll
24 explain further in the executive session, we feel
25 the three percent contribution to reserves

1 requested in Blue Cross' initial filing is
2 inadequate to maintain solvency.

3 As you've already heard, at the
4 end of '23, the RBC level was at 337 percent, and
5 reserves continue to trend negatively, such that
6 capital and surplus may be insufficient. Under
7 the RBC order that the department issued about
8 five years ago now, February of 2019, we required
9 a -- an RBC level -- a target ratio between 590
10 percent and 740 percent.

11 When we developed that range, we
12 worked with our actuaries and worked with -- with
13 the cooperation of Blue Cross -- reviewed and
14 approved that target range. And the auditors
15 intended it as a guideline to support RBC request
16 in future rate filings. As previously stated by
17 the Department, the range of surplus target by
18 Blue Cross is reasonable and necessary to protect
19 policy holders.

20 And just to give a little
21 backdrop, some of you may or may not know, but as
22 the Commissioner -- Insurance Commissioner, we're
23 part of the National Association of Insurance
24 Commissioners. So I serve in that -- in that
25 association with other state-based regulators.

1 And there were certainly instances in the 80s and
2 90s with both property and casualty and health
3 insurers, failures that resulted in the
4 development of model laws and the development of
5 the risk-based capital model. Prior to that,
6 there was just general capital standards,
7 regardless of the size or mixed profile, risk
8 profile of the entity.

9 So the RBC model now stands up a
10 more specific reference point and guideline to
11 account for individual differences among
12 regulated entities. And these requirements are a
13 minimum amount of capital required for an insurer
14 to support its operations and rate coverage. The
15 RBC model outlines a method for measuring this
16 minimum amount of capital and authorizes
17 regulators to take preventative actions.

18 And under these model laws, there
19 are four levels of regulatory intervention,
20 ranging from submission of action plans to a
21 regulatory takeover of the company. These
22 measures are designed to allow regulators to
23 identify and correct solvency problems before
24 insolvencies occur. And we're at that early
25 stage now of the action plans.

1 And we do see that the current
2 trends are causing us to focus on some key areas
3 that the action plan should -- should encompass.
4 The FR's goal to keep Blue Cross in the QHP
5 market is to ensure that individuals have access
6 to major medical coverage. As you may already
7 know, Blue Cross has approximately two-thirds of
8 the QHP market, and it has only one other
9 competitor.

10 Maintaining its solvency is
11 critical to ensuring access for individuals and
12 small businesses. I'll have additional testimony
13 that requires the discussion in confidential
14 information and executive session.

15 And in conclusion, I just want to
16 emphasize that I think we've heard -- I've heard
17 a couple different times about developing an
18 increased contribution to reserves. And this is,
19 again, to stabilize the reserves. And it's going
20 to directionally start to move in towards the
21 range. But we are much closer to action levels
22 and insolvency than we are the range. So this is
23 more of a critical turning point that we see as
24 the solvency regulators.

25 The primary factor in an insurer's

1 ability to maintain solvency is whether its rates
2 are adequate. And this is just -- don't take
3 this as my attempt to define affordability. Just
4 through the lens of the solvency regulator, I
5 would just say, you know, an affordable rate is
6 the lowest adequate rate. Because we certainly
7 have to first have adequacy and make sure we have
8 markets protected and solvency of the payers and
9 the insurers.

10 So availability of coverages, you
11 know, are one of our key concerns and also just
12 the fact that we are in a noncompetitive
13 structure here with two primary providers of the
14 QHP market. So those are my general comments.
15 We'll have more to discuss in executive session,
16 but I'm happy to take any questions.

17 MR. BARBER: Thank you. So does
18 Blue Cross have any questions for this public
19 session?

20 MS. ASAY: We do not. Thank you.

21 MR. BARBER: Does the ACA have any
22 questions?

23 MR. SCHULTHEIS: Just a few
24 questions.

25 All right. Commissioner Gaffney,

1 so I'm going to ask you a few questions. About
2 the DFR solvency opinions. So I'm going to
3 direct you to the exhibit and pages we were
4 talking about. I said this before, but I think
5 it bears repeating. Just for clarity, I'm
6 referring to the red page numbers printed on the
7 bottom pages of the binder pages. So first off,
8 just for clarity, again, DFR issued two solvency
9 opinions in these matters, right?

10 MR. GAFFNEY: Yes.

11 MR. SCHULTHEIS: And these two
12 solvency opinions are essentially the same,
13 correct?

14 MR. GAFFNEY: Essentially, yes.

15 MR. SCHULTHEIS: Essentially,
16 yeah. So would you turn to Exhibit 16, which is
17 DFR's solvency opinion for the individual rate
18 filing? Let me know when you get there.

19 MR. GAFFNEY: I'm here.

20 MR. SCHULTHEIS: Great. So if
21 we're talking about reserves, which are measured
22 at the enterprise level, it makes sense for me to
23 just ask you questions about one opinion, since
24 each opinion contains essentially the same
25 information about reserves that we just stated?

1 Sorry. Do you want me to repeat that?

2 MR. GAFFNEY: Did you ask me a
3 question? I'm sorry.

4 MR. SCHULTHEIS: I did. No. No
5 problem. So since we're talking about reserve
6 levels and reserves are measured at the
7 enterprise level, I can just ask you questions
8 about DFR's opinion in the small group memo, and
9 it's essentially the same.

10 MR. GAFFNEY: Okay.

11 MR. SCHULTHEIS: Okay. So could
12 you turn to page 4 of Exhibit 16? Exhibit 16 is
13 the solvency opinion. And do you see that little
14 line graph on the top of the page?

15 MR. GAFFNEY: Now, you're
16 referring, just to be clear, Mr. Schultheis,
17 you're talking about the small group now?

18 MR. SCHULTHEIS: Yeah. So Exhibit
19 16, page 4.

20 MR. GAFFNEY: Okay. Because you
21 had me -- I was in the individual.

22 MR. SCHULTHEIS: Yep. Sorry.

23 MR. GAFFNEY: I was in the
24 individual. I'm on the small group now. Go
25 ahead.

1 MR. SCHULTHEIS: So I just want to
2 be clear for the record, in Exhibit 16 is
3 solvency impact 2025 for Mont QHP market,
4 individual rate filing of Blue Cross Blue Shield
5 of Vermont. Is that where you are, Commissioner
6 Gaffney?

7 MR. GAFFNEY: Are you using -- you
8 used the small group reference, and you used
9 individual, so just let me know --

10 MR. SCHULTHEIS: Oh. Yeah, yeah,
11 yeah. I'm sorry.

12 MR. GAFFNEY: -- which solvency
13 opinion do you want me to be looking at?

14 MR. SCHULTHEIS: Yeah. I just --
15 I just wanted to clear things up. We're on
16 Exhibit 16, page 4. Do you see the graph, the
17 line chart on the top of page 4?

18 MR. GAFFNEY: The RBC ratio over
19 time?

20 MR. SCHULTHEIS: Yep. The
21 historical contribution to reserves.

22 MR. GAFFNEY: Yes. Okay.

23 MR. SCHULTHEIS: Okay. So I just
24 want to make sure we all understand this graph.
25 So on the Y axis is contribution to reserves as a

1 percentage of premium.

2 MR. GAFFNEY: Okay.

3 MR. SCHULTHEIS: Correct? And
4 then on the X axis is years 2019 through 2023,
5 correct?

6 MR. GAFFNEY: Yes.

7 MR. SCHULTHEIS: And the Blue line
8 is what Blue Cross filed for percent contribution
9 to reserve, right?

10 MR. GAFFNEY: Yes.

11 MR. SCHULTHEIS: And the yellow
12 line is what the Board approved, right?

13 MR. GAFFNEY: Yes.

14 MR. SCHULTHEIS: And the red line
15 is the actual contribution to reserves, right?

16 MR. GAFFNEY: Yes.

17 MR. SCHULTHEIS: Okay. So I know
18 this is going to be partially a function of the
19 scale of the Y axis, but the blue line and the
20 yellow line are pretty close together; is that
21 correct?

22 MR. GAFFNEY: Well, they look
23 close together, but they are different.

24 MR. SCHULTHEIS: I know they're
25 different. And I know if we change the scale of

1 the Y axis, that difference could be made bigger
2 or less, right?

3 MR. GAFFNEY: I mean, just to be
4 clear, rather than -- rather than talking about
5 what they look like, I would say that the blue
6 line, and Jesse can keep me straight, is closer
7 to that one and a half percent level --

8 MR. SCHULTHEIS: Okay.

9 MR. GAFFNEY: -- I believe.

10 MR. LUSSIER: That's correct.

11 MR. SCHULTHEIS: So I'm just
12 asking --

13 MR. GAFFNEY: And the yellow line
14 -- and the yellow line is as low as negative, I
15 think, in the most recent year.

16 MR. SCHULTHEIS: Okay. But I
17 asked you if the lines look like or are
18 relatively close, at least compared to the space
19 between the red line and both the yellow and blue
20 line; is that correct?

21 MR. GAFFNEY: Well, I like to deal
22 with numbers, so I'll just say that the filed CTR
23 of one percent was as much as I think almost two
24 points lower in the most recent year.

25 MR. SCHULTHEIS: Okay. So just to

1 be clear, I want to -- and you like to talk about
2 numbers, the observation in 2023 of the blue line
3 and the yellow line is much higher than the
4 observation on the red line; is that correct?

5 MR. GAFFNEY: Absolutely. Well,
6 except for -- except for, obviously, COVID in
7 2020, where COVID --

8 MR. SCHULTHEIS: No. I'm asking
9 about 2023, Commissioner Gaffney.

10 MR. GAFFNEY: Okay.

11 MR. SCHULTHEIS: Okay.

12 MR. GAFFNEY: Just '23 is what
13 you're asking for -- well, you've been talking
14 about the trends. I just want to -- you're
15 talking about '23?

16 MR. SCHULTHEIS: Yep. That was my
17 question, sir.

18 MR. GAFFNEY: Okay.

19 MR. SCHULTHEIS: Okay. And then I
20 want you to look at the first paragraph of page 4
21 in the exhibit we're on. So Exhibit 16 and DFR
22 states that the inadequate premium rates, Blue
23 Cross's contribution, actual contribution to
24 reserves has been negative, correct?

25 MR. GAFFNEY: Yes.

1 MR. SCHULTHEIS: Okay.

2 MR. GAFFNEY: Over time.

3 MR. SCHULTHEIS: And I'm looking
4 at the graph right now. Would it be fair to say
5 that Blue Cross's predictions of premium were
6 off? Because that red line looks a whole lot
7 lower in 2023 than either the blue or the yellow
8 line.

9 MR. GAFFNEY: Yeah. No, that's a
10 fair observation of what you're saying. I would
11 say that there's a lot of different components
12 that go into that -- probably some that we need
13 to discuss in the executive session. But what
14 I'll say is that it's not just a product of
15 anticipated claims, it's a product of the
16 approved rate -- rate increase.

17 MR. SCHULTHEIS: So I want you
18 to -- can you turn to page 3 in Exhibit 16, and
19 look at the third full paragraph, the third and
20 the fourth sentences?

21 MR. GAFFNEY: Jesse --

22 MR. SCHULTHEIS: So that starts --

23 MR. GAFFNEY: Jesse, I'm going to
24 ask you to help me where I'm at because I'm just
25 looking at the solvency opinions.

1 MR. LUSSIER: This is Jesse. Are
2 we talking about the sentence that starts, "Rates
3 are developed"?

4 MR. SCHULTHEIS: Yep. Jesse,
5 that's correct. So in that sentence, DFR
6 acknowledges the truism that because rates are
7 prediction, there's not a big C correct rate,
8 just probabilities, right?

9 MR. GAFFNEY: Correct.

10 MR. SCHULTHEIS: Okay. And I just
11 want to ask you two questions about what you
12 talked about just now. So you said that solvency
13 is needed to ensure at access, correct?

14 MR. GAFFNEY: Yeah. Solvency is
15 necessary at a minimum to make sure you have a
16 marketplace. Yes.

17 MR. SCHULTHEIS: So I wonder if
18 it's actually quite that simple. So it seems
19 like solvency is sufficient or is necessary to
20 ensure access, like you just said. But also if
21 people can't pay for services, then they don't
22 have access. So they're both -- they're both
23 necessary facts, but neither one is sufficient;
24 is that correct?

25 MR. GAFFNEY: I think what you're

1 asking is outlining the challenge of this year.
2 The challenge that, you know, is ultimately in
3 the hands of the Board, in that -- that access is
4 -- is about having payers in the market, one,
5 right? You need -- you need insurers to have a
6 marketplace, and we have -- we have two. And the
7 one we're talking about has two-thirds of the
8 marketplace. And it's on a negative trend that's
9 well below the recommended range.

10 And the reason you have the
11 recommended range is exactly what you were saying
12 when you said big C correct rate. There isn't --
13 there isn't that, right? You're going to predict
14 you're going to try to predict and anticipate
15 future losses and then you're going to have your
16 experience. And those are going to vary.
17 Hopefully, the -- the variance is modest, but it
18 can be, you know, in certain years increasing.

19 And I think we've seen in recent
20 years an increasing deterioration in outcomes and
21 morbidity in Vermont. And -- and that's why we
22 got much more involved. This was on our radar
23 based on the year-end RBC. But when we saw the
24 results in early part of this year, in April and
25 May, we really felt that we needed to engage more

1 actively and start those action plans.

2 MR. SCHULTHEIS: So I think we all
3 understand the solvency position. I just want to
4 direct us back to what you said about access. So
5 access is a complex idea, correct, in that it
6 involves both solvency and whether people can
7 actually afford to go see a doctor, correct? Is
8 that what you're saying?

9 MR. GAFFNEY: Well, I'm just
10 saying that at the outset, access is about having
11 a marketplace, and then access is also about the
12 affordability of the marketplace. But you don't
13 start with what do you want the price to be. You
14 start with what do you need the premium to be to
15 pay future obligations. So that's the solvency
16 calculus.

17 It's how do you -- how do you meet
18 the future obligations and how do you insure --
19 because it's not just about like company action
20 levels, but it's about whether -- whether
21 companies stay in a particular market. And so we
22 just we are -- we are in this position where we
23 are far outside the range and really feel that
24 it's reasonable what's being filed here, because,
25 you know, a seven percent CTR is still not going

1 to -- it's going to start to shift in the right
2 direction if it's actually realized.

3 MR. SCHULTHEIS: Commissioner
4 Gaffney, I'm sorry. I'm going to stop you. I
5 was asking about access and not the overall
6 solvency position. I don't think anyone is
7 disputing what Blue Cross's solvency position is
8 now. I'm just asking, like, think about this
9 kind of scenario, right?

10 You have adequate rates. They're
11 hugely expensive, right? Only Elon Musk can
12 afford to pay for that insurance. And what I'm
13 saying to you -- what I'm asking you is, like,
14 that's great. Elon has a lot of access, but all
15 the people who are priced out don't have access;
16 is that correct?

17 MR. GAFFNEY: Well, I don't think
18 that's the situation we're in, but --

19 MR. SCHULTHEIS: Well, sure.
20 We're not in it. I was trying to be extreme.

21 MR. GAFFNEY: So that's not the
22 situation we're in. So I just have to deal with
23 the situation we're in. And the situation we're
24 in is that there's increasing costs. So even the
25 base rate increase is double-digit. And there's

1 also a need, a need to bolster reserves of one of
2 our payers that, that that serves two-thirds of
3 the marketplace.

4 So my focus in terms of access is
5 making sure there's a payer in the future because
6 if we do nothing, and we have no payer in the
7 future, then I haven't done anything to help
8 access for anyone.

9 MR. SCHULTHEIS: Okay. So then
10 it's -- I think what I'm hearing is, like, I
11 mean, and I understand it, I think. It's that
12 it's your job working for Department of Financial
13 Regulation to focus on solvency and not these
14 other aspects of access, correct?

15 MR. GAFFNEY: I think the
16 Department -- so I'm just staying in the lane
17 here. But I will say that the Department is
18 always open to collaborating with our sister
19 agencies, with the Green Mountain Care Board, on
20 ways to affect other cost drivers of health
21 insurance. So we're always willing to be at the
22 table and assist in those areas. But when we're
23 staying in the kind of the area of the rate
24 regulator, the Green Mountain Care Board and the
25 solvency regulator, DFR, that's what I'm trying

1 to articulate. We understand there's other
2 factors that --

3 MR. SCHULTHEIS: Okay.

4 MR. GAFFNEY: -- underpin this,
5 but there's some basic financial actions that we
6 see are necessary.

7 MR. SCHULTHEIS: Fair. I want to
8 ask you just really one question about -- well, I
9 hope it's one question -- about affordability,
10 which I know you said you didn't want to get
11 into. And then you said that it's that there's
12 an adequate rate. Did you say that? Did I hear
13 that right?

14 MR. GAFFNEY: Yeah. I think I
15 qualified it as I'm not attempting to define
16 affordability. All I'm saying is through the
17 lens of where we are and as the solvency
18 regulator, it seems like, you know, from a
19 solvency perspective that, you know, adequacy is
20 that lowest possible adequate rate.

21 MR. SCHULTHEIS: So I'm just
22 wondering is -- are you are you familiar with
23 GMCB Rule 2, which says, you know, about the
24 rates adequacy and that it's not excessive. And
25 then there's another word that's about

1 affordable. It sounds like you're saying that
2 word shouldn't be there. It should just be an
3 inadequate.

4 MR. GAFFNEY: No. I think that
5 actually also includes insurance solvency in
6 that.

7 MR. SCHULTHEIS: Oh, it does
8 include that, too. So all three things let's
9 say.

10 MR. GAFFNEY: Yeah. So it's all -
11 - it's all part of it. It's all part of it. All
12 I'm saying is as a solvency regulator, we have to
13 make sure we have payers in the future that can
14 meet their obligations.

15 MR. SCHULTHEIS: Okay. Thank you,
16 Commissioner Gaffney. That's all my questions.
17 And I reserve the right to do additional cross if
18 the witness speaks in executive session.

19 MR. BARBER: Board Member Walsh,
20 do you have any questions for the DFR?

21 MR. WALSH: Yes. Thank you. Good
22 morning, Mr. Gaffney. Thanks for being with us.

23 MR. GAFFNEY: Good morning.

24 MR. WALSH: My question also was
25 regarding Exhibit -- the graph at Exhibit 16 on

1 page, I think it was 4. And I wanted your help
2 understanding the historical contribution to
3 reserves. What leads to the difference, the
4 actual contribution compared to the filed
5 contribution?

6 MR. GAFFNEY: Well there's three
7 components. There's the file contribution,
8 there's the approved contribution, and then
9 there's the actual. So the actual is once you
10 actually have your experience and your claims,
11 and you know, and I think there's a graph above
12 here, which, you know, you can just see the
13 surplus over time, going from a high of 130 -- in
14 the last five years, 135 million to 87, just
15 almost 88 million in the most recent year.

16 MR. WALSH: So the --

17 MR. GAFFNEY: There's losses. The
18 last two years, I think there's 45 million in
19 losses the last two years. And that's kind of
20 consistent with that red line.

21 MR. WALSH: So those -- those
22 losses have been paid out of the -- out of the
23 reserve?

24 MR. GAFFNEY: Yeah. That's where
25 you see the reduction in the reserves, right.

1 You see that same trend line where the reserves
2 are dropping and the contribution to reserves are
3 negative.

4 MR. WALSH: Okay.

5 MR. GAFFNEY: Yeah. I mean, the
6 basic kind of the basic -- oh, yeah. Go ahead,
7 Jesse.

8 MR. LUSSIER: I was going to say,
9 if you go to page 3 of the exhibit, and you see
10 the dollar amounts of the gains/losses for the
11 QHP, that's essentially what the red line is
12 reflecting.

13 MR. GAFFNEY: Thank you, Jesse.

14 MR. LUSSIER: Yeah.

15 MR. WALSH: Got it. Okay.

16 MR. GAFFNEY: That's the -- that's
17 the 15 and 32 million the last two years that I
18 was referencing there, you know, around 47
19 million.

20 MR. WALSH: Okay. Thank you.
21 That was my only question.

22 MR. GAFFNEY: Thank you. Thank
23 you, Jesse.

24 MR. BARBER: Board Member Murman,
25 do you have any questions?

1 MR. MURMAN: I don't right now.

2 Thanks.

3 THE COURT: Board Member Lunge?

4 MS. LUNGE: Hi, Commissioner.

5 Hi, Jesse. Thanks for joining us.

6 MR. GAFFNEY: Thank you.

7 MS. LUNGE: I had a couple
8 questions about what materials you used in
9 preparing your solvency opinion. Did you review
10 the Blue Cross Blue Shield's annual statement?

11 MR. LUSSIER: Yeah. Do you want
12 me to --

13 MR. GAFFNEY: I think there were a
14 number of things. I'll let Jesse kind of run
15 through all the things that we looked at.

16 MR. LUSSIER: Yeah, just in the
17 normal course of solvency, we'll review the
18 annual statements and all of the related
19 information that comes in through the annual
20 statements and through the iSite database. And
21 we can talk more about that in the executive
22 session. So we reviewed their -- their
23 12/31/2023 data. And in addition to that, Blue
24 Cross has been updating us with the 2024
25 information as it becomes ready.

1 So I think the -- the-- the most
2 recent information is --is probably through May,
3 as we've been discussing. At a high level,
4 that's what we've been reviewing. Let me know if
5 you want any more specific information.

6 MS. LUNGE: Thank you. All right.
7 Could I ask you to turn to Exhibit 26, which was
8 not in the printed binder, but was distributed.

9 MR. GAFFNEY: I'm not sure I have
10 a copy of that.

11 MR. BARBER: I was worried about
12 that. Let me take a minute to email that to you.

13 MS. LUNGE: Okay. So we -- while
14 you're doing that I'll come back to it. And
15 certainly, I can -- I only have a couple more
16 questions. So if you need a moment to review it,
17 we can have others go and then come back to it.

18 So on page 2 of Exhibit 16, which
19 is -- it looks like the language is also
20 identical in Exhibit 17, page 2. In the second
21 to last paragraph, you indicate that you are
22 monitoring solvency, quote, using all available
23 tools. What tools are those?

24 MR. LUSSIER: So the -- generally
25 speaking, solvency analysis includes reviewing

1 the reports that we talked about before. iSite,
2 which is NEIC's database has -- yeah, the Board's
3 familiar with the annual report, correct?

4 MS. LUNGE: I can only speak for
5 myself. So I'm familiar with the annual report.
6 I can't speak for anyone else.

7 MR. LUSSIER: You've seen those.
8 The -- every single data point that's captured in
9 the annual report is -- is within iSite. and I
10 think our analysis is confidential, so I can
11 speak more about this in the executive session,
12 but there are a series of just practices and
13 procedures that are kind of standardized that
14 come down from the NEIC.

15 Those include the annual reports
16 and the information that comes along with the
17 annual reports. And again, I can talk more about
18 that in the executive session, if that's okay.

19 MS. LUNGE: That sounds great.
20 Thank you. It sounds like I should probably just
21 reserve the rest of my questions for the
22 executive session. And maybe in order to give
23 you time to look at exhibits.

24 I don't know how you want to
25 handle Exhibit 26, Mike, do you want me to ask

1 Jesse or give him some time to be able to look at
2 it?

3 MR. BARBER: Exhibit 26 is not
4 confidential, to my knowledge. So I'd prefer to
5 get that out of the way now.

6 MS. LUNGE: Okay. Have you
7 received Exhibit 26, Jesse --

8 MR. LUSSIER: Yes.

9 MS. LUNGE: -- Commissioner?

10 MR. GAFFNEY: We have it. We just
11 got it.

12 MS. LUNGE: Okay. Great. So is
13 it fair to say that this exhibit is a summary of
14 information included, for the most part, in the
15 annual statements as demonstrated by the
16 references in the far left column?

17 MR. LUSSIER: It appears so yes.

18 MS. LUNGE: Okay. So could you
19 tell me which of these items you considered in
20 writing your solvency report?

21 MR. LUSSIER: We consider the --
22 which of these items specifically? I mean, of
23 course --

24 MS. LUNGE: Yes.

25 MR. LUSSIER: -- I think you would

1 normally look at the underwriting gain and loss.
2 The -- that's one of our main focuses, as in
3 specifically the QHP lines. But we'll also look
4 at I'm looking at -- find out what else is here.
5 Obviously, we'll look at the reserves, the ACL
6 and the RBC, which are on the bottom. And -- and
7 generally, we focus on the underwriting gain or
8 losses of -- of the QHP business.

9 MS. LUNGE: Okay. This however,
10 because it is based on the annual statement,
11 would be all underwriting gains or losses, not
12 just the QHP business; is that correct?

13 MR. LUSSIER: Correct.

14 MS. LUNGE: Would you have
15 considered, or did you consider one, two, three
16 four -- the fourth line down, equity gains and
17 losses for the Medicare Advantage business?

18 MR. LUSSIER: As it applies to the
19 overall reserves of -- of the entity, yes. But I
20 don't think we specifically reviewed it.

21 MS. LUNGE: Okay. And in your
22 solvency opinion, however, the only items that
23 you referred to were the underwriting gains and
24 losses; is that right?

25 MR. LUSSIER: I'm sorry. Could

1 you repeat that?

2 MS. LUNGE: In your solvency
3 opinion, you only refer to the underwriting gains
4 and losses; is that right?

5 MR. LUSSIER: We refer to -- well,
6 we refer to the RBC.

7 MR. GAFFNEY: RBC.

8 MR. LUSSIER: And we also --

9 MS. LUNGE: But in terms of the
10 factors that contribute to the RBC level.

11 MR. LUSSIER: Oh. I think we
12 might have to reread the letter.

13 MS. LUNGE: Okay. Thank you.

14 MR. GAFFNEY: Yeah.

15 MS. LUNGE: I have no further
16 questions.

17 MR. BARBER: Okay. Chair Foster,
18 do you have any questions?

19 CHAIR FOSTER: Just sort of one
20 conceptually, if that's okay.

21 Thanks for being here,
22 Commissioner Gaffney. It's nice to see you.

23 MR. GAFFNEY: Our pleasure. Same
24 here. Our pleasure. Wish it was under better
25 circumstances.

1 CHAIR FOSTER: Yeah. I share that
2 feeling. So these -- these rates, I understand
3 the financial situation and the solvency
4 concerns. They're acute. And if you look at
5 this insurer, they do a pretty good job on admin
6 costs, and they're very leanly run. But I worry
7 that there might be people buying down insurance
8 or leaving the insurance market all together
9 because of the cost increase, right? So a 24
10 percent or a 20 percent rate increase, several
11 hundred dollars per month more for -- for folks.
12 Do you have any concerns about the level of rate
13 increases causing the market to shrink, thus
14 putting greater long-term pressure on the
15 insurer?

16 MR. GAFFNEY: I mean, there's a
17 lot of considerations, Mr. Chair, and certainly,
18 you know, we want to make sure, you know, getting
19 back to the access discussion, that we can afford
20 access to as many as want this valuable coverage.
21 So it's always, right, it's always a concern.
22 Even as the solvency regulator, obviously, I'm
23 the regulator of rates and solvency and many
24 other markets.

25 So all of these dynamics are front

1 of mind when we're dealing with this. It's -- is
2 there a functional availability issue once the
3 price hits a certain level, right, where it
4 doesn't become available? But you know, the
5 critical issue here, though, is we are on the
6 verge of something more substantive than -- and
7 I'm not saying it's not substantive. I'm not
8 discounting because I can answer your question
9 more specifically and acutely, in that, I've
10 already talked with my staff about, well, what is
11 one point of CTR per member per month. And
12 that's between 10 and \$11. So we understand the
13 impact here. We're trying to be mindful of that
14 impact.

15 We also recognize, at least in
16 today's structure, that at least in the
17 individual market, there are almost 30,000, you
18 know, individuals receiving subsidies. So that
19 impact at least will be moderated for those that
20 can least afford it. But that doesn't -- that
21 doesn't, you know, that doesn't solve all the
22 considerations or issues, but it's all part of
23 what we're -- we -- we think about as solvency
24 regulators.

25 CHAIR FOSTER: Are you on your end

1 in your office, seeing any signs of potential
2 deterioration of the market because of the costs?
3 And what I mean by that really is either a
4 shrinking pool or people buying lower levels of
5 coverage?

6 MR. GAFFNEY: Yeah. Not in the
7 solvency work, and I'll say that that's certainly
8 something that I think we all should be trying to
9 assess. What is the -- what is the -- what are
10 the dynamics, the market response to these --
11 these things? I've seen it. And I can tell you
12 just more broadly, I've seen it in the -- in the
13 property and casualty market, and all of you are
14 familiar with Florida and Texas and California,
15 and all the other challenges we're having.

16 And what we're seeing over time in
17 these markets is that costs are going up, and
18 cost sharing sometimes has to go up so that that
19 can mitigate the overall cost, whether that's
20 higher deductibles and the like. So -- so all of
21 those dynamics are in play in a marketplace,
22 right? And we just -- our primary focus here is
23 we'd be -- we'd be not -- we'd be asleep at the
24 wheel if we weren't addressing the critical issue
25 of having a payer in the marketplace.

1 CHAIR FOSTER: Okay. I have no
2 other questions. Thank you, sir. Nice to see
3 you.

4 MR. GAFFNEY: Yeah. Same here.

5 MR. BARBER: And Board Member
6 Holmes, did you have any questions?

7 MS. HOLMES: No, I did not. Thank
8 you.

9 MR. BARBER: Thanks. So it sounds
10 like, Commissioner and Jesse, that you have some
11 additional testimony you'd like to give in the
12 executive session, and the Board members have
13 some additional questions for you for that
14 confidential session as well. So I'm not exactly
15 sure when that will be, but the order of things
16 is now we're going to hear, I think, from one
17 more witness, probably need to break briefly for
18 lunch and then come back to an executive session
19 likely in the early afternoon. Are you able to
20 be with us for that?

21 MR. GAFFNEY: I've cleared my
22 schedule. Yes.

23 MR. BARBER: Okay. Thank you.

24 So Mr. Chair, do you have any
25 preference of whether we move on to. Dr.

1 Weigel's testimony now or take -- take, like, a
2 30-minute lunch break now?

3 CHAIR FOSTER: Why don't we try
4 and get through Dr. Weigel's direct at least and
5 maybe just a two-minute break for folks. I think
6 we've been going an hour and a half or so. Maybe
7 just two minutes, and then we'll do Dr. Weigel?
8 Five? Five minutes.

9 MR. BARBER: Okay. Okay. Let's
10 go off record and we'll see everyone back here at
11 two till noon.

12 (Recess at 11:53 a.m., until 12:01
13 p.m.)

14 MR. BARBER: All right. And Blue
15 Cross, if you'd like to call your next witness,
16 please?

17 MR. DONOFRIO: Yes. Thank you,
18 Mr. Barber. We call Dr. Thomas Weigel. Thank
19 you.

20 MR. BARBER: Okay. Doctor. Dr.
21 Weigel, I'd like to administer the oath now if
22 that's all right?

23 DR. WEIGEL: Yes.

24 MR. BARBER: Okay.

25 Whereupon,

1 THOMAS WEIGEL,
2 a witness called for examination by counsel for
3 Blue Cross, was duly sworn, and was examined and
4 testified as follows:

5 MR. BARBER: Go ahead, Mr.
6 Donofrio.

7 MR. DONOFRIO: Thank you.

8 Dr. Weigel, please state your name
9 and current position for the record.

10 DR. WEIGEL: Sure. My name is Tom
11 Weigel. I'm the Chief Medical Officer at Blue
12 Cross Blue Shield of Vermont. I'd also like to
13 add that I'm in the same small office as Mike,
14 but I am not changing my background due to the
15 prior warning that I might be cut off.

16 MR. DONOFRIO: Good. Thank you
17 for that clarification. Your background is nicer
18 than mine. How long have you held that position?

19 DR. WEIGEL: Since September of
20 2022.

21 MR. DONOFRIO: And when did you
22 start at Blue Cross?

23 DR. WEIGEL: December of 2021.

24 MR. DONOFRIO: If you would,
25 please briefly describe your job

1 responsibilities.

2 DR. WEIGEL: Sure. As Chief
3 Medical Officer, I serve as the principal
4 clinical spokesperson and executive responsible
5 for the program's budget and resources; the
6 pharmacy quality utilization management; case
7 management; and medical director departments. I
8 recommend and monitor clinical aspects of benefit
9 administration, monitor the quality of healthcare
10 services, conduct quality improvement programs,
11 and participate in provider reimbursement,
12 development, and value-based care initiatives.

13 MR. DONOFRIO: Did you prepare
14 pre-filed testimony for this proceeding?

15 DR. WEIGEL: Yes.

16 MR. DONOFRIO: Would you please
17 turn to Exhibit 20 in the binder that's on the
18 desk in front of you?

19 DR. WEIGEL: Yes.

20 MR. DONOFRIO: Are you there?

21 DR. WEIGEL: Yes.

22 MR. DONOFRIO: And is that the
23 pre-filed testimony that you prepared?

24 DR. WEIGEL: Actually, let me turn
25 -- yes. That is.

1 MR. DONOFRIO: And was all of that
2 testimony true and correct to the best of your
3 knowledge, at the time we submitted it?

4 DR. WEIGEL: Yes.

5 MR. DONOFRIO: And does that
6 remain the case today?

7 DR. WEIGEL: Yes.

8 MR. DONOFRIO: Are you aware that
9 as part of the Board's review of the proposed
10 rates before them, the Board has to consider
11 whether the proposed rates are affordable,
12 promote quality care, promote access to
13 healthcare, protect insurer solvency and are not
14 unjust, unfair, inequitable, misleading, contrary
15 to the laws of the state and that they are
16 adequate and not excessive?

17 DR. WEIGEL: Yes.

18 MR. DONOFRIO: So one of the many
19 criteria that I just listed is that the proposed
20 rates are affordable. Do you believe the
21 proposed rates satisfy this criterion, and could
22 you please explain?

23 DR. WEIGEL: Sure. I -- I believe
24 the proposed rates satisfy the affordability
25 criterion, providing our members with access to

1 high-quality healthcare they need at the lowest
2 possible cost to them is our core mission and the
3 overarching goal of everything we do.

4 We do understand that many of our
5 members struggle to pay the premiums we have to
6 charge in individual and small group markets. We
7 understand that the proposed rates currently
8 under review are no exception.

9 That's why we undertake a host of
10 programs aimed at reducing the cost of
11 healthcare, thus enhancing affordability, while
12 also promoting quality and access to necessary
13 care. Those programs are detailed in the May
14 13th, 2024 memo I prepared along with our CFO,
15 Ruth Greene, which was submitted as Attachment D
16 to the rate filings. And it's also attached to
17 my pre-filed testimony.

18 MR. DONOFRIO: Would you please
19 turn to page 2 of Exhibit 5 in the binder?

20 DR. WEIGEL: Yeah.

21 MR. DONOFRIO: Is that the first
22 page of the document you just described?

23 DR. WEIGEL: Yes.

24 MR. DONOFRIO: What is the purpose
25 of that document?

1 DR. WEIGEL: In past rate review
2 proceedings, the Board has voiced an expectation
3 that Blue Cross to provide more information
4 related to affordability. So this document is
5 our response to that expectation.

6 MR. DONOFRIO: How does the
7 document fulfill that expectation?

8 DR. WEIGEL: It describes the
9 programmatic efforts we're engaged in as we try
10 to control healthcare costs, using the relative -
11 - relatively limited levers that we have.

12 MR. DONOFRIO: Now, before we turn
13 briefly to those programs, I want to ask you, Dr.
14 Weigel, did you have a chance before the hearing
15 to review the public comments about the proposed
16 rates that the Board provided the parties on
17 Friday afternoon?

18 DR. WEIGEL: Yes, I did. And
19 they're powerful and it really a painful
20 illustration of the burden we know that many of
21 our members and Vermont neighbors face. This is
22 exactly where we're trying to do everything we
23 can to slow the growth of our members' healthcare
24 costs, because slowing that growth system wide is
25 the only way we can reverse the trend of ever-

1 growing premiums and make healthcare affordable
2 and sustainable for Vermonters.

3 MR. DONOFRIO: So is -- is Blue
4 Cross aware that its current proposed rates
5 outstrip economic indicators that reflect
6 people's ability to pay things like household
7 income or wage growth?

8 DR. WEIGEL: We're aware of
9 general economic indicators regarding wage
10 growth, inflation, and household income. We
11 also, of course closely track increases in the
12 price and utilization of the healthcare costs
13 that we pay for. We're keenly aware that the
14 growth of those healthcare costs outpaces
15 increase in wages and household income.
16 Compounding that challenge, Vermont's healthcare
17 spending is a high outlier compared to the rest
18 of the country.

19 MR. DONOFRIO: Can Blue Cross
20 adapt its rates to line up with economic
21 indicators like household income or wages?

22 DR. WEIGEL: Unfortunately, no.
23 Blue Cross cannot develop rates based on
24 individual member and small group employee income
25 or business finances. Even if we had perfect

1 information about our members' incomes and small
2 business finances, we would have no choice but to
3 propose rates that are adequate to cover our
4 projected claim costs, regardless of how those
5 rates compare to the economic indicators because
6 we're legally obligated to cover our members'
7 costs.

8 MR. DONOFRIO: So again, how --
9 how -- in the face of that, how are you able to
10 conclude that the proposed rates are affordable?

11 DR. WEIGEL: The facts I just
12 discussed leave us with only two levers that we
13 can control to propose rates that are as
14 affordable as possible. The programs I mentioned
15 earlier, which are described in Exhibit 5 that
16 aim to reduce underlying healthcare costs and the
17 tight control we exert over our own
18 administrative costs. Because I believe we are
19 doing everything we can on those two fronts, I
20 conclude that the proposed rates are affordable
21 in the context of this proceeding.

22 MR. DONOFRIO: So do you track and
23 review information about how healthcare costs in
24 Vermont stack up to costs around the country?

25 DR. WEIGEL: I do.

1 MR. DONOFRIO: And how do
2 Vermont's costs currently compare?

3 DR. WEIGEL: Sure. Looking at
4 data from the Kaiser Family Foundation healthcare
5 expenditures, at least in 2020, were 20 percent
6 higher than the national average. I'm seeing
7 that these costs are getting higher and higher
8 each year. To begin with, according to the 2024
9 RAND 5.0 report cited in my pre-filed testimony
10 University of Vermont Medical Center operates at
11 317 percent of Medicare rates, far exceeding the
12 national norm for hospitals.

13 So again, they're at 317 percent. As a
14 reference, Dartmouth-Hitchcock operates at 191
15 percent of Medicare rates and the most expensive
16 hospital in Massachusetts, Mass General Brigham,
17 operates at 231 percent of Medicare.

18 The impact of those high UVM Medical
19 Center rates ripples across Vermont's entire
20 healthcare system because UVM Medical Center
21 absorbs about half or 52 percent of our total
22 hospital spend, according to the Board's most
23 recent Vermont hospital reporting on year-end
24 actuals.

25 That financial strain is exacerbated

1 because here in Vermont, about 47 percent of our
2 total healthcare expenditure flows into
3 hospitals, according to the 2020 Vermont
4 Healthcare Expenditure Analysis. That amount is
5 far above the national average -- that 47 percent
6 is far above the national average of 30 percent
7 as reported in Peterson Kaiser Health System
8 Tracker.

9 MR. DONOFRIO: So referring back
10 to Exhibit 5 in the binder, the memo that you
11 described earlier, would you please briefly
12 describe the programs discussed in that document?

13 DR. WEIGEL: Sure. Programs that
14 enhance access, quality and affordability span
15 the following three categories -- value based
16 payment models; payment integrity; integrated
17 health management, which includes both case
18 management and utilization management. Beyond
19 those programs, we achieved additional savings
20 for our members by managing our administrative
21 costs aggressively and keeping them low,
22 especially for a plan of our size. Our
23 comprehensive network and world class members
24 support further promote ready access to high
25 quality care for our customers.

1 MR. DONOFRIO: And are you
2 prepared to answer specific questions today from
3 Mr. Schultheis for the HCA and the Board members
4 regarding the contents of this document?

5 DR. WEIGEL: Yes.

6 MR. DONOFRIO: Okay. Before I
7 wrap up, I'd like to ask you a few questions
8 about hospital budgets. So first off, how do the
9 rates -- hospital rates set by the Board impact
10 Blue Cross' premium and reserves?

11 DR. WEIGEL: Sure. Blue Cross is
12 unable to negotiate with hospitals effectively
13 after they have undergone the Green Mountain Care
14 Board review process. In our experience,
15 hospitals view the Board's order as the
16 definitive amount owed to them, which hinders
17 traditional payer provider negotiations.

18 Instead of discussing the specifics of
19 each Blue Cross provider contract, hospitals now
20 focus solely on implementing the Board-ordered
21 commercial cap, which was clarified last year
22 that it was a cap. The hospital's interpretation
23 of the Board's hospital review process has,
24 therefore, eliminated our ability to engage in
25 the sorts of meaningful negotiations that used to

1 occur.

2 MR. DONOFRIO: How does the manner
3 in which hospitals implement the Board's hospital
4 budget orders affect your negotiations with the
5 hospitals, bearing in mind -- you know, please
6 restrict your testimony to kind of more general
7 statements and not granular numerical statements
8 about specific negotiations. That can be covered
9 in executive session if necessary.

10 DR. WEIGEL: Sure. The virtual
11 monopoly of Vermont hospitals has historically
12 made negotiations difficult. And since the Green
13 Mountain Care Board process was implemented,
14 negotiations have become essentially impossible.
15 For example, UVMHN has developed expertise in
16 modeling reimbursement terms that appear to align
17 with the Green Mountain Care Board cap, but
18 results in aggregate unit cost increases
19 exceeding the cap.

20 Attempts to address high payment areas
21 are met with the health network's insistence on
22 offsetting any sort of savings or reductions for
23 our members, with increases elsewhere to maintain
24 revenue right up to the Green Mountain Care Board
25 approved cap.

1 MR. DONOFRIO: Dr. Weigel, can you
2 comment on the effectiveness or ineffectiveness
3 of the current revenue-focused hospital budget
4 model?

5 DR. WEIGEL: Sure. I think a big
6 part of it has to do with the starting point and
7 the idea that --that we're making increases from
8 a starting point. A revenue-focused model does
9 not work effectively, especially with the current
10 baseline revenue at 317 percent of Medicare being
11 exorbitant. In fact, looking at the RAND data,
12 the outpatient charges at UVM Medical Center are
13 actually 427 percent of Medicare.

14 So looking at that as a starting point
15 and saying that we should make a 3.4 percent
16 increase doesn't make sense, and we should
17 instead be working backwards toward something
18 that should be appropriate for, you know,
19 hospitals in the United States or hospitals with
20 that profile. The goal should really be to
21 ensure that hospitals don't take in more money
22 than necessary. Blue Cross Vermont historically
23 cannot negotiate lower -- lower overall payments
24 once the Board approves a commercial rate
25 increase, except for some minimal discounts.

1 UVM Health Network has taken the
2 negotiating position that total revenue can now
3 be reduced by payment reform efforts, payments
4 integrity programs, reduced payment for any
5 specific service, or any other mechanism.
6 Excluding UVM Health Network from our provider
7 network is not realistic due to the negative
8 impact on patients and the existing consumer
9 protections, which would actually force us to pay
10 a higher out-of-network rates if we were not
11 contracted with them. These facts leave us with
12 virtually no leverage in those negotiations.

13 MR. DONOFRIO: What is the
14 consequence if a hospital ends up taking in more
15 revenue than its Board-ordered budget level?

16 DR. WEIGEL: To the best of my
17 knowledge, there's no -- almost no repercussion
18 from going over the Green Mountain Care Board-
19 ordered budget level. From my understanding the
20 hospitals have been consistently allowed to
21 retain excess revenues.

22 MR. DONOFRIO: Does Blue Cross
23 plan to take any action in this regard?

24 DR. WEIGEL: Sure. As Ms. Greene
25 testified and has stated in her pre-filed

1 testimony, we plan to approach hospitals that
2 exceed the Green Mountain Care Board-ordered
3 commercial rate cap for release.

4 MR. DONOFRIO: One moment, please.
5 I have no further questions at this time.

6 MR. BARBER: Okay. That didn't
7 take long, but I feel like there's a lot there
8 that Board members and HCA will have questions on
9 that will take us pretty far. So why don't --
10 Chair Foster, if it's all right with you, can we
11 take a quick lunch break and then come back to
12 this?

13 CHAIR FOSTER: Sounds great.

14 MR. DONOFRIO: Mr. Barber, can I -
15 - can I just ask one question of Mr. Schultheis?
16 Do you have a sense of how long your cross is?

17 MR. SCHULTHEIS: Ten minutes, I
18 would say on the outside.

19 MR. DONOFRIO: The -- the
20 litigator in me would ask, with the hearing
21 officer's and the Board's indulgence, could we
22 move through the cross since it's not that long
23 and pause at that point?

24 MR. BARBER: That's fine with me,
25 so --

1 MR. DONOFRIO: Thank you.

2 MR. BARBER: Eric?

3 MR. SCHULTHEIS: It's a lot of
4 pressure to speak quickly.

5 So hi, Dr. Weigel.

6 MR. DONOFRIO: Eric, I don't want
7 to strong arm you into anything so.

8 MR. SCHULTHEIS: No. You're not.
9 I'm just --

10 MR. DONOFRIO: If you want the
11 break, please take the break.

12 MR. SCHULTHEIS: No. Absolutely
13 not. I just was making a joke.

14 MR. DONOFRIO: Okay. Thank you.

15 MR. SCHULTHEIS: Dr. Weigel, I'm
16 going to ask you a few questions about the
17 affordability standard in rate review and then
18 talk with you about hospital prices and its
19 impact on health insurance premiums.

20 DR. WEIGEL: Okay.

21 MR. SCHULTHEIS: I'm going to be
22 referring to some of your pre-filed testimony,
23 but I'm not going to ask you to read things out
24 loud. I will, however, direct your attention to
25 a page and line so that you can remember what you

1 said, okay?

2 DR. WEIGEL: Okay.

3 MR. SCHULTHEIS: Okay. Please
4 turn to Exhibit 20, page 4. Exhibit 20 is your
5 pre-filed testimony and various attachments. Let
6 me know when you get there. Maybe you're already
7 there.

8 DR. WEIGEL: Yes, I am there.

9 MR. SCHULTHEIS: Okay. So just to
10 know, like, I'm not going to be asking you about
11 what Blue Cross does to reduce rates, but what
12 the affordability standard is. So on page 4,
13 lines 1 through 5, you're asked a question
14 whether you are familiar with the standard the
15 Board uses to evaluate rate filings, and you
16 state that you are, correct?

17 DR. WEIGEL: Correct.

18 MR. SCHULTHEIS: And then in lines
19 9 through 19 on that page, you explain why you
20 believe the proposed rates meet the affordability
21 criterion, correct?

22 DR. WEIGEL: Right.

23 MR. SCHULTHEIS: Yeah. And then,
24 well, you don't even have to turn to it. It's
25 the other page that you're open to page 5, and

1 look at lines 4 through 6. You are asked a
2 question about why the rates are affordable.
3 Specifically, the question you are asked is how
4 the rates can be affordable, quote, even though
5 they outstrip economic indicators that reflect
6 Vermonters' ability to pay like household income
7 and wage growth, right?

8 DR. WEIGEL: Yes.

9 MR. SCHULTHEIS: Okay. So -- so I
10 want you to think back to the standard, which you
11 know. The rate review standard doesn't say
12 affordable but not considering whether Vermonters
13 can pay, correct?

14 DR. WEIGEL: It doesn't say
15 anything about pay.

16 MR. SCHULTHEIS: Okay. So it just
17 says affordable?

18 DR. WEIGEL: Right.

19 MR. SCHULTHEIS: Okay. And then I
20 want to direct your attention to page 6, lines 10
21 through 14. Let me know when you're there.

22 DR. WEIGEL: Yep.

23 MR. SCHULTHEIS: Okay. You say
24 there are two levers that Blue Cross can control
25 to propose the lowest rate possible, right?

1 DR. WEIGEL: Right.

2 MR. SCHULTHEIS: And those two
3 levels, you say, are administrative costs and
4 healthcare costs generally, correct?

5 DR. WEIGEL: Correct.

6 MR. SCHULTHEIS: Okay. And you
7 conclude on lines 13 and 14 that because Blue
8 Cross controls those two levers, that the
9 proposed rates are affordable, right?

10 DR. WEIGEL: Right.

11 MR. SCHULTHEIS: But the rate
12 review standard doesn't say affordable insofar as
13 administrative costs are kept low, right? Like,
14 there's no modifier to the word affordable.

15 DR. WEIGEL: I don't think it has
16 that language in it either. No.

17 MR. SCHULTHEIS: Okay. And the
18 rate review standard also doesn't say affordable
19 if the carrier tries to contain healthcare costs,
20 right?

21 DR. WEIGEL: Does not have that
22 language in, correct.

23 MR. SCHULTHEIS: All right. So
24 I'm going to switch topics now to hospital
25 prices. And like I said to Ms. Greene, my

1 preference is that we speak in generalities and
2 have as much of our discussion in the public
3 session as possible. So as always, as I said to
4 Ms. Greene, just let me know or your counsel will
5 let me know if we are kind of moving in the
6 direction of confidential information, and you
7 can answer the question in closed session, okay?

8 DR. WEIGEL: Okay.

9 MR. SCHULTHEIS: All right. So
10 turn back to page 5 of Exhibit 20. So as you
11 just said in your pre-filed testimony, you list
12 some shocking facts about UVMMC prices. UVMMC
13 has a relative price of 317 to Medicare, compared
14 to Dartmouth at 191, and Mass General Brigham at
15 231, right?

16 DR. WEIGEL: Yes.

17 MR. SCHULTHEIS: How did you feel
18 when you saw those relative price numbers?

19 DR. WEIGEL: I was surprised, and
20 I did my training at Mass General. And I know
21 the comprehensive care that they provide there,
22 you know, every level of care and every specialty
23 and subspecialty service. So I was again
24 surprised at that difference.

25 I guess the other thing that jumped out

1 at me is, this is 2022 data. And I believe the
2 medical center got a 14 percent bump in 2023. So
3 rough math would move 317 percent above 350
4 percent.

5 MR. SCHULTHEIS: And so looking
6 nationally or thinking about prices nationally,
7 if you know, how does UVMC's prices compare to
8 other academic medical centers?

9 DR. WEIGEL: I don't have that
10 data in front of me. I do know that the average
11 U.S. hospital is 250 percent of Medicare, and
12 that the RAND rated hospitals on a scale of 1 to
13 10, with 5 being average, and that, at least, with
14 the 2022 data, UVM was a 9 out of 10.

15 MR. SCHULTHEIS: So if you could
16 follow up, maybe with kind of relative prices of
17 other academic medical centers that are kind of
18 the same size, right? We don't talk about, like,
19 huge Cedar Sinai or something like that included.
20 That would be great.

21 DR. WEIGEL: Okay.

22 MR. SCHULTHEIS: So you know, I
23 guess, well, you know this better than me, but so
24 if my memory serves me, this is pre the merger of
25 MGH and Brigham Women. But I was just trying to

1 think doesn't -- isn't the -- doesn't MGH have a
2 pretty high percentage of Medicaid patients?

3 DR. WEIGEL: That's my
4 recollection. I don't have that in front of me,
5 but they certainly serve an urban community.

6 MR. SCHULTHEIS: Okay. So I'm
7 just reading through your testimony, and you
8 state that UVMMC accounts for 52 percent of Blue
9 Cross's hospital spend in Vermont; is that right?

10 DR. WEIGEL: Right.

11 MR. SCHULTHEIS: Right. So in
12 your opinion, is that other 48 percent big enough
13 that it is material to the rate? So what -- the
14 other -- looking at the other 13 hospitals in
15 Vermont?

16 DR. WEIGEL: You know, the other
17 13 hospitals would, you know, add up and
18 aggregate for something material. And yeah.

19 MR. SCHULTHEIS: All right. So I
20 want to switch topics again and briefly get your
21 opinion on this rate review process and how it
22 compares to the hospital budget process. And
23 some of this covers things that Mr. Donofrio
24 already spoke with you about, and some of it is
25 taking things from a slightly different angle

1 than he spoke about. So you spoke that the two
2 regulatory processes. Are they -- do they seem
3 substantially different to you?

4 DR. WEIGEL: Sorry. Which two
5 regulatory processes?

6 MR. SCHULTHEIS: Sorry. Rate
7 review. So what we're currently in and how
8 hospital budgets work.

9 DR. WEIGEL: All right, yeah, but
10 -- well, they're definitely different and
11 connected.

12 MR. SCHULTHEIS: So how are they
13 different, Dr. Weigel?

14 DR. WEIGEL: Well, you know, it's
15 more of the focus of the review. I think we're
16 in this unique situation in Vermont where a lot
17 of what we do as a payer is transparent. And so
18 if we're making changes to the way things happen
19 and the way we do things or cost that, that ends
20 up going into the Green Mountain Care Board, you
21 know, rate review.

22 Whereas in other states you could make
23 a change that might be pretty impactful
24 financially and not, you know, lower your rates
25 because of that. So given that they are tied

1 together because, you know, we have to work the
2 hospital rates into what we're doing.

3 MR. SCHULTHEIS: Yeah. So you
4 talked a little bit with Mr. Donofrio about, you
5 know, how regulating revenue ignores the starting
6 point of prices, right? I want --

7 DR. WEIGEL: Right.

8 MR. SCHULTHEIS: -- talk to you
9 about NPR in a slightly different way. And I'm
10 doing this not to discount your previous
11 observations, but to highlight another issue with
12 regulating NPR, okay?

13 DR. WEIGEL: Yes.

14 MR. SCHULTHEIS: So this is an
15 oversimplification, but at a really high level,
16 commercial charge multiplied by utilization
17 equals net patient revenue?

18 DR. WEIGEL: Right. And it's not
19 by payer, but in aggregate, I believe.

20 MR. SCHULTHEIS: Yeah. So I'm
21 trying to understand what this means. So one
22 hospital has high prices, say four, and low
23 utilization, say two. And then we have another
24 hospital with low prices, say two, but high
25 utilization, say four. Both of those hospitals

1 have a net patient revenue of eight; is that
2 right, kind of roughly?

3 DR. WEIGEL: I think I'm following
4 what you're saying. It sounds correct.

5 MR. SCHULTHEIS: So like, that to
6 me is odd. I mean, so two very different things
7 could look the same when measured by net patient
8 revenue, right?

9 DR. WEIGEL: Yeah. For example,
10 Northeastern Vermont Regional Hospital has about
11 187 percent of Medicare. And so they could see,
12 let's say, one and a half people for the same
13 codes as the medical center.

14 MR. SCHULTHEIS: So when we talk
15 about access or expanding access, we're not
16 really talking about revenue. We're talking
17 about prices times utilization, right?

18 DR. WEIGEL: Correct. Yes.

19 MR. SCHULTHEIS: All right. So
20 thank you so much, Dr. Weigel. Those are all of
21 my questions for the nonexecutive session.

22 DR. WEIGEL: Thank you.

23 MR. BARBER: Okay. I think a
24 quick lunch break and return at 1, unless anyone
25 has any objections to that. Proceed with Board

1 questions for Dr. Weigel on these topics. Plan
2 for an executive session after that to hear from
3 Ruth Greene, DFR and Dr. Weigel and then finish
4 up with the actuaries and Mr. Fisher. So anyone
5 have any objections to that plan?

6 MR. DONOFRIO: Mr. Barber, we're
7 back on the record at 1:00; is that right?

8 MR. BARBER: Yes.

9 MR. DONOFRIO: Okay. Thank you.

10 MR. BARBER: Okay. Let's go off
11 record and I'll see everyone back here at 1.
12 Thanks.

13 (Recess at 12:29 p.m., until 1:04 p.m.)

14 THE CLERK: Okay. We're going
15 back on the record. The time is 1:04 p.m.

16 MR. BARBER: Okay. And Dr.
17 Weigel, just to remind you, you're still under
18 oath and I'll turn it over to Board Member Walsh
19 for questions.

20 MR. WALSH: Thank you and good
21 afternoon, Dr. Weigel. I appreciate your
22 testimony earlier, diving a little bit deeper
23 into pricing. During the break, I was trying to
24 get a better sense of some of the percentages
25 that were being shared in written testimony and

1 while you were talking.

2 In earlier testimony, it was
3 discussed that fifty-four percent of Blue Cross
4 business is due to GMCB regulated entities and 46
5 percent to nonregulated entities. And I was
6 wondering if you or anyone on the staff has
7 examined pricing trends, utilization trends or
8 coding, diagnostic coding changes among
9 nonregulated entities, where the growth in claims
10 seems to be rising faster than among regulated
11 entities?

12 DR. WEIGEL: So we'll get you more
13 data on this. And our team may be able to answer
14 some of these questions.

15 MR. WALSH: Yeah.

16 DR. WEIGEL: You know, let's say
17 the unregulated providers in Vermont would be our
18 community providers. We typically have them on a
19 community fee schedule, which, you know, would go
20 up. I think we had proposed for this coming year
21 that that community fee schedule would go up by
22 4.5 percent. And there's been similar increases
23 in prior years, let's say, plus or minus a couple
24 percent, whereas the hospitals have gone up, you
25 know, double digits a number of years.

1 MR. WALSH: Um-hum. Yeah. Yeah.
2 That's very clear from the data that you've
3 shared with us and data we've seen elsewhere.
4 I'm just trying to get a clear sense of
5 everything that's going on. Forty-seven percent
6 of Blue Cross business among regulated entities
7 is to hospitals. I think that number was
8 mentioned earlier. And 52 percent of that 47 is
9 UVM.

10 DR. WEIGEL: Medical center.

11 MR. WALSH: Medical Center. And
12 if it is the health network, what percentage
13 would that jump to; do you know?

14 DR. WEIGEL: I don't have that in
15 front of me.

16 MR. WALSH: Okay. I'd like to
17 know that. And I'm also interested to know -- we
18 think of the medical trend -- I think of the
19 medical trend, as I said earlier this morning, as
20 a function of the utilization of care and the
21 price of that care and the diagnostic intensity
22 associated with the patient using that care. And
23 all three of those can drive the medical trend.

24 And what I've heard consistently from
25 testimony so far today is that the prices, rising

1 prices, seem to be the biggest driver. And
2 that's consistent with the literature that I've
3 seen from across the country.

4 Our prices in Vermont are rising
5 faster -- among the fastest in the nation I've
6 also heard you say. It'd be helpful to me
7 thinking about this to try to understand what
8 proportion of the rise in premiums is due to
9 prices versus utilization versus diagnostic
10 intensity.

11 Because we have a challenge of trying
12 to encourage greater access, which should drive
13 up utilization, which will drive up the medical
14 trend, which would raise premiums. So trying to
15 understand what is a reasonable reason for rising
16 premiums would -- would be helpful to us. Member
17 Holmes talked earlier about follow-up questions,
18 and I think understanding utilization price and
19 diagnostic intensity by hospital is something
20 that if you're able to help us with, I'd greatly
21 appreciate that.

22 DR. WEIGEL: Sure. I think it
23 would be best if we gave you a breakdown of the
24 exact data. And I have 2022 to 2023 data for,
25 you know, major facility. And of that 5.4

1 percent was an -- there's a 5.4 percent increase
2 in number of members served. There was a 12.5
3 percent increase in number of services, an 11.5
4 percent increase in allowed dollars per service
5 and a 6.7 percent increase in services per
6 member.

7 I don't expect you to remember
8 that, but those are the types of numbers it
9 sounds like you're looking for. You know, what's
10 the service going up by; how many more members;
11 you know, what's the coding impact. So we'll get
12 you that data for the different hospitals.

13 MR. SCHULTHEIS: That'd be very
14 helpful. Thank you very much. That's all I had.

15 MR. BARBER: Dr. Murman?

16 MR. MURMAN: Hey. Yeah, thanks.
17 Thanks, Dr. Weigel. I just have a few questions.
18 So one is something I asked Ms. Greene, and maybe
19 I'll sort of try to ask you as well and see if I
20 can get more insight into this, which really
21 speaks to Exhibit 12, page 9, the last paragraph
22 on that page. There is a description of how when
23 a hospital is given a rate increase from the
24 Green Mountain Care Board, that they have
25 flexibility to adjust their charge master in a

1 way that they think is probably best for their --
2 their -- their business. And that when -- then
3 when you go negotiate with them, you're
4 negotiating discounts off that charge master. I
5 guess one, one -- the first question I have is,
6 does that sound like a reasonable summary of that
7 paragraph?

8 DR. WEIGEL: It does. So for
9 example, if a hospital is getting a five percent
10 increase and let's say this past year, they have
11 the same utilization for a head MRI with contrast
12 and a head MRI without contrast, for this
13 following year, if they got a five percent bump,
14 they might say we're going to increase the with
15 contrast by seven percent and the without
16 contrast by three percent.

17 MR. MURMAN: And that is something
18 they do on their own, and -- and you don't have
19 any negotiation with, or do you have some ability
20 to augment their prices?

21 DR. WEIGEL: So we do the math on
22 our end, and as long as it looks like it will be
23 cost neutral based on utilization, we work with
24 them around that.

25 MR. MURMAN: And is that

1 neutrality across the whole line of business from
2 that hospital, or would that be just within
3 imaging, say, for instance?

4 DR. WEIGEL: That would be across
5 the whole hospital. So they could propose a
6 reduction in inpatient, an increase in
7 outpatient. They could propose a reduction for
8 cardiology and an increase for ENT. You know, an
9 example that might make sense of how this could
10 be impactful over time.

11 MR. MURMAN: That'd be great.

12 DR. WEIGEL: Sure. So for example
13 you know, the UVM Medical Center, as you said,
14 doesn't or all the hospitals don't necessarily
15 increase their charges for each thing equally.
16 There's something, as you know, called conscious
17 sedation, so --

18 MR. DONOFRIO: So Dr. Weigel and
19 Board Member Murman, I apologize for stepping in.

20 DR. WEIGEL: Sure.

21 MR. DONOFRIO: I just want to
22 caution you that if we're getting into specific
23 facts and figures --

24 DR. WEIGEL: Yeah.

25 MR. DONOFRIO: -- probably best

1 left for executive session.

2 DR. WEIGEL: Okay. Yeah. This is
3 an example for executive session then.

4 MR. MURMAN: Okay. That'd be
5 that'd be great. So but I think with looking at
6 public data in say for instance, the RAND data,
7 you can see when you look at our Vermont
8 hospitals, some of them have say, astronomically,
9 there's a there's a table there in the RAND data
10 table 4, which has breaks out the outpatient
11 services.

12 And you can see that some of our
13 hospitals have incredibly high prices for things
14 like you mentioned, MRIs, CT scans. And so what
15 I'm trying to understand is that from what you're
16 saying is that is the hospital's choice of where
17 to put that rate increase. They want to put that
18 in advanced imaging. They could put that in
19 advanced imaging, but they might take a reduction
20 somewhere else say an obstetric care,
21 hypothetically?

22 DR. WEIGEL: Correct.

23 MR. MURMAN: Okay. And so -- and
24 when we look at the RAND data, what's sort of a
25 common trend across all the Vermont hospitals is

1 no matter where they sit in their pricing, their
2 outpatient pricing is several deciles above their
3 inpatient pricing. I don't know if you noticed
4 that trend, but I see that there. Do you see
5 that, too?

6 DR. WEIGEL: Yes. I looked at the
7 RAND data. Yeah.

8 MR. MURMAN: There may be one or
9 two outliers. I'm not 100 percent sure, but that
10 that looks pretty -- so and one thing that we do
11 hear from time to time is that hospitals lose
12 money on these inpatient medical admissions or
13 other inpatient admissions. But it sounds from
14 what I'm understanding now, and just -- if you
15 think this is correct, that they actually have
16 the ability to choose where that rate goes.

17 They could choose to increase the
18 reimbursement for inpatient medical admissions.
19 But it appears that the choice compared to
20 national peers has gone towards the outpatient
21 services category. Does that seem reasonable
22 interpretation of that from what you can tell?

23 DR. WEIGEL: Looking at the data,
24 that sounds reasonable.

25 MR. MURMAN: Okay. And so --

1 okay. And so when the -- I'm still trying to
2 understand the details of this and I'm sorry if
3 this is redundant for other people, but so when
4 the Board orders this -- so one thing that we see
5 in the hospital budget process is sometimes a
6 hospital, and there's a few hospitals that budget
7 with this methodology.

8 They'll say they could add up
9 everything they got last year. And they look at
10 their revenue coming in this year. And they look
11 at what their increased utilization they predict,
12 and they say, oh wow, we're going to be short \$10
13 million. So what we need is more commercial rate
14 increases to make up that \$10 million.

15 And what I'm trying to understand is --
16 we've also heard testimony to certain hospitals,
17 if they -- if they can't get that -- if there's a
18 sort of, say, an initiative from an insurer to
19 reduce the payments in an area because of a
20 quality issue or whatnot, that that the hospital
21 then say, well, you need to increase the payments
22 to offset those reduced payments, is that that's
23 something that I think we've spoken about before.

24 DR. WEIGEL: Right.

25 MR. MURMAN: Does that -- does

1 that sound accurate?

2 DR. WEIGEL: Correct. Yeah.

3 MR. MURMAN: Okay. So then if a
4 hospital is --comes over that, say, \$10 million
5 that was needed through commercial rate increase
6 -- so I guess, is that \$10 million increase the
7 rate that we're talking about. So let's say they
8 get 100 million in commercial revenue, and they
9 need 110, and they're going to get that through
10 increased commercial rate, is the rate that we
11 talk about the price, or is it that -- that --
12 that total revenue generated from, say, one
13 commercial insurer, as far as you know?

14 DR. WEIGEL: The extra -- so
15 that's the breakdown that I think was being asked
16 for for hospitals. So some of it is the rate per
17 service which is where we try to match up that
18 Green Mountain Care Board rate. Some of it is
19 increased utilization, and some of it is you
20 could either say increased complexity or
21 increased coding. You know, so you can -- you
22 can code things to get paid more, you could say.
23 So those would be three categories. And
24 hopefully that will bear out in some of that data
25 that we send you on the hospitals.

1 MR. MURMAN: Okay.

2 DR. WEIGEL: So that extra \$10
3 million could be more patients through the door.
4 It could be more complex patients according to
5 coding, or it could be that the rate increase was
6 five percent, but on average, the charges came in
7 at eight percent.

8 MR. MURMAN: Okay. Can I draw
9 your attention to Exhibit 26? Total different
10 topic. And this may have been more appropriate
11 for Ms. Greene, but -- and if so we can talk
12 about it, I guess, at a different time. But in
13 line one, two, three, four there's equity and
14 gains losses VBA. What is VBA?

15 DR. WEIGEL: So that's Vermont
16 Blue Advantage. That's our Medicare Advantage
17 product, which did not exist until 2020.

18 MR. MURMAN: Okay. And then in
19 2020, if I'm reading this right, it lost \$3.4
20 million?

21 DR. WEIGEL: That's how I'm
22 reading it.

23 MR. MURMAN: Okay. And then '21
24 would be \$6 million, '22, \$11.5 million and then
25 '23 \$22.5 million loss there?

1 DR. WEIGEL: So I'm going to defer
2 to either Ms. Greene or to Martine on that
3 because it's quite possible that the business
4 didn't even start until 2021, so I don't have the
5 answers for you on -- on that.

6 MR. MURMAN: Okay. I'm just
7 trying to -- this is something I maybe I didn't
8 pick up until I read this chart again today.
9 That looks maybe like 40 --

10 DR. WEIGEL: Yeah. I think what
11 Ms. Greene testified was that that's a new line
12 of business for us. And so we actually budgeted,
13 you know, a loss for a number of years because
14 it's starting up in a Medicare line of business
15 that we were not in before. And so because of
16 that, there's no contributions to our reserves
17 that are coming from that because there was a
18 built-in loss to get into that line of business.

19 MR. MURMAN: Okay. I think that
20 this chart though, and maybe we could defer this
21 to talk with Ms. Greene about it again. But this
22 chart doesn't -- okay. So this is all
23 contribution to reserves and those. So this is
24 drawing from reserves essentially to run this
25 program?

1 DR. WEIGEL: That's my impression.
2 But why don't we leave that for Ms. Greene?

3 MR. MURMAN: Okay. That is all I
4 have right now, so thank you.

5 MR. BARBER: Board Member Lunge?

6 MS. LUNGE: I think all of my
7 questions are related to executive session, so I
8 will pass it on to the next.

9 MR. BARBER: And the next is Board
10 Member Holmes.

11 MS. HOLMES: Great. Thank you.
12 And good afternoon, Dr. Weigel.

13 DR. WEIGEL: Good afternoon.

14 MS. HOLMES: I wanted to talk to
15 you about -- I think it's on Exhibit 5, page 4,
16 the enhanced community primary care program.

17 DR. WEIGEL: Okay.

18 MS. HOLMES: Are you the right
19 person to ask this question about this program?

20 DR. WEIGEL: Yes.

21 MS. HOLMES: Okay. In the
22 description there, it described a \$6.30 per
23 member per month maximum for delivering, you
24 know, high-quality, low-cost care. But the
25 expected payout would be about \$2.54 per member

1 per month. So I'm wondering if you could just
2 describe a bit the expected shortfall there from
3 the primary care provider's perspective, why
4 they're falling short of achieving the maximum
5 payout.

6 DR. WEIGEL: Sure. So this is a
7 program that was new in 2024. And what we did
8 was we took the dollars that were previously
9 being paid to OneCare for their programs. And
10 we're taking that money and putting it into these
11 two value-based care programs, Vermont Blue
12 Integrated Care, or VBC, and the ECPC program
13 that you referenced.

14 And so for the program that you
15 referenced, we actually focused this program on
16 community primary care providers. And so and we
17 also had heard feedback from our other program,
18 VBC, that the providers didn't want to have to
19 submit information to us about things that they
20 were doing, but that they just wanted us to
21 recognize the good work that they were doing and
22 incentivize that. So we looked at claims
23 metrics, which are easy for us to measure and to
24 look at.

25 And so we're looking at quality of

1 care metrics around high blood pressure and
2 diabetes direction of services, whether they're
3 referring their patients more expensive sites for
4 laboratory care or imaging. There was an
5 incentive to install an electronic medical record
6 overlay called Innovaccer. This is an overlay
7 that helps providers close gaps in care and avoid
8 duplicative care. And so they could earn a
9 certain amount PMPM for each criteria that they
10 met. And so it's possible that if you didn't
11 meet all the criteria, that you wouldn't get that
12 whole \$6.30.

13 Most of the shortfall was actually
14 for not installing the Innovaccer program EMR
15 overlay. And so we're reexamining that for the
16 2025 year to see whether we want to incorporate
17 that.

18 MS. HOLMES: Got it. Is there a
19 calculation that you've done about the expected,
20 say, return on that investment, PMPM, in terms of
21 the cost savings that you're expecting? I mean,
22 will it exceed, for example, \$2.54 per member per
23 month?

24 DR. WEIGEL: Yeah. We don't have
25 the data --

1 MS. HOLMES: Or \$6.30?

2 DR. WEIGEL: Yeah. We don't have
3 the data yet for that.

4 MS. HOLMES: Is there a plan to do
5 that calculation?

6 DR. WEIGEL: Definitely, yes.

7 MS. HOLMES: Okay. I'm curious
8 about these GLP-1 drugs, the Wegovys and the
9 Mounjaros. It is listed as one of the drivers
10 explaining some of the pharmaceutical trend. And
11 I'm wondering if you, when you're doing the
12 calculations, thinking about the increased
13 pharmaceutical expense associated with these
14 drugs, do you also factor in any potential cost
15 savings associated with better diabetes
16 management or you know, better cardiovascular
17 disease outcomes through weight loss, anything
18 like that?

19 We've got the pharmaceutical trend
20 uptick. Is there any compensating reduction in
21 cost associated with the use of these drugs in in
22 the calculations?

23 DR. WEIGEL: Yeah. So most of
24 these medications are pretty new. And so we
25 don't have the long-term data. The weight loss-

1 specific medications, the pharmaceutical
2 companies are actually pursuing FDA approvals for
3 non-weight loss medications. .

4 So for example, cardiovascular
5 disease and things like that. So but we don't
6 have long-term data to really see what the cost
7 savings might be. We do have data to suggest
8 there's a very high discontinuation rate for
9 these medications over the course of a year. And
10 we can provide that data if that's of interest.

11 MS. HOLMES: No. I'm just curious
12 if there's an associated benefit to usage of
13 these drugs in terms of cost savings that's also
14 included in the analysis.

15 DR. WEIGEL: Yeah. So I -- I -- I
16 can try to dig up a paper. I'm doing this from
17 memory, but there was an analysis around the cost
18 of the medications and the savings, and I believe
19 the analysis was that I think medications would
20 have to cost about seventeen times less to
21 actually -- with the gains and benefits for heart
22 disease, and you know, all these other things
23 that the medications are so expensive, you know,
24 1,000-plus a month that they don't -- at that
25 price, they don't offset, but I -- I'll dig up

1 that article for that.

2 MS. HOLMES: Okay.

3 DR. WEIGEL: My number might be
4 wrong.

5 MS. HOLMES: That's okay. I'm
6 asking you on the fly. And I'm also curious
7 about in 2024, Blue Cross Blue Shield waived
8 prior approval for the open MRI machine, using
9 the open MRI versus another alternative. My
10 assumption is that there's expected cost savings
11 associated with waiving that prior approval
12 process. Is that something that you all have
13 analyzed?

14 DR. WEIGEL: We don't have numbers
15 from that, and we actually did not plan for
16 specific cost savings. The hope is that
17 providers generally will refer their patients to
18 open MRI, which is a lower cost facility, but you
19 know, we have no way to really predict how much
20 of that would happen.

21 MS. HOLMES: Okay. And do you
22 waive any other prior auths for other lower cost
23 providers? That's the one that's noted, and I
24 believe there was even a news article about it,
25 but I'm wondering if there's other opportunities

1 for waiving of prior authorizations for other
2 low-cost providers.

3 DR. WEIGEL: I'll have to talk
4 with my contracting person and get back to you on
5 that. You know, we certainly made a big effort
6 in 2023 to remove prior authorizations for all
7 in-state in-network mental health services,
8 whether it's inpatient, residential, partial
9 hospital, IOP, outpatient therapy, outpatient
10 psychiatry visits. We don't have any prior
11 authorizations on those, and were able to remove
12 those hopefully to, you know, increase access --
13 and in that realm.

14 MS. HOLMES: Okay. That'd be
15 helpful to understand how you're able to direct
16 patients to -- to more lower cost providers,
17 particularly since the providers themselves are
18 the ones often directing that care, as you well
19 know, but they might have an incentive if they
20 don't have to fill out a prior auth, right, to --
21 to direct their patients to more lower cost
22 services.

23 I'm also curious about your -- the
24 description of the lab benefit management and
25 sounds like you're working with a third-party

1 vendor -- vendor to provide more oversight of the
2 genetic tests that are being done and also
3 hospital lab work. And I'm wondering how much
4 you're expecting to save from this particular
5 program, and if any -- if your third-party vendor
6 has identified any outlying providers that are
7 ordering a high number of potentially unnecessary
8 labs or tests yet in your analysis.

9 DR. WEIGEL: So on the latter one,
10 they -- you know, they have you know, payment
11 integrity and you know, fraud, waste, and abuse
12 built into how they -- how they pay the claims.
13 The most common thing that they would see would
14 be an unbundling, meaning, you know, you can
15 order like a chem 7, which includes seven
16 different tests and that's billed as a bundle or
17 you can bill all seven separately, which is a lot
18 more expensive. So most of what they catch is
19 the bundling or unbundling for that. And Martine
20 would have information about the savings on that.

21 MS. HOLMES: Okay. I will hold
22 that thought then. And then this is the question
23 that I had actually asked Ms. Greene this morning
24 with regard to all of the hospital and insurance
25 price transparency data that's now available,

1 wondering if Blue Cross Blue Shield had done any
2 analysis comparing the negotiated rates at
3 Vermont hospitals, New Hampshire border hospitals
4 with the larger out-of-state insurers, you know,
5 the Aetnas, the Cignas, United Healthcare, all of
6 those larger insurance carriers, wondering if how
7 Blue Cross Blue Shield stacks up in the
8 negotiated rates with our hospitals on an
9 absolute level, and then, frankly, on an annual
10 growth level.

11 I know that data hasn't been out
12 that long, but what kind of analysis has Blue
13 Cross Blue Shield done to see that?

14 DR. WEIGEL: Yeah, I think we'll
15 have to send that to you separately, but I'm
16 happy --

17 MS. HOLMES: Okay.

18 DR. WEIGEL: -- to get that for
19 you.

20 MS. HOLMES: That's fantastic.
21 Thank you. And I recognize there are a lot of
22 codes to analyze. So if it's -- you know, if you
23 want to pick the most frequent codes or something
24 like that, that you have -- whatever analysis
25 you've done that would give us a sense of -- of

1 relative negotiated rates.

2 And then I just have one other
3 question, but frankly, it's a big one, so it's
4 like a 40,000-foot question. And you know, this
5 relates to the work that we're doing as a state
6 right now. You know, this premium growth that
7 we're seeing, I think we can all recognize it's
8 unsustainable, and as I'm sure you're aware, Act
9 167 requires the Green Mountain Care Board to
10 work in collaboration with AHS to try and figure
11 out more cost-effective ways to deliver
12 healthcare in the state.

13 And I think what we're seeing and
14 learning is a bit about, you know, how affordable
15 are we -- is our current healthcare system and
16 the financial projections of hospitals are
17 troubling. Blue Cross Blue Shield solvency is
18 troubling. If you look at hospitals -- if you
19 look at households and businesses, they're
20 struggling to pay taxes and premiums.

21 So my question to you is you have
22 a very unique perspective over the entire system,
23 and I'm wondering what you -- specifically what
24 you might see as a path forward for hospital
25 system transformation that's going to bend

1 premium growth in the future and whether Blue
2 Cross Blue Shield has any data or analysis that
3 would help us inform our hospital transformation
4 process along the dimensions of quality.

5 For example, are there certain
6 hospitals where revision surgeries are really
7 high or surgical site infections are really high
8 because maybe volumes are low? Or are there
9 any -- is there any data around costs? You know,
10 you've talked a little bit about prices already.
11 You've talked a little bit about potentially
12 unnecessary labs and images, but I'm wondering
13 what -- what you see as a path forward to -- to
14 try and provide some premium relief to consumers
15 in the future and what data you could add to the
16 conversation to help us move there.

17 DR. WEIGEL: Sure. You know,
18 first looking at quality, what we see in our
19 quality data and when the Blue Cross Association
20 looks at our data compared to, you know, other
21 Blue Cross plans. You know, the quality of our
22 Vermont providers is fairly solid, and so we
23 don't see major quality issues. That being said,
24 there's certainly one-offs here and there.

25 You know, I'm interested to hear

1 more about what comes out of the Oliver Wyman
2 assessments and eventual recommendations. You
3 know, we have a lot of -- you know, we have
4 hospitals throughout the state and are they each
5 performing the right sorts of services for those
6 community members who are in that area, and are
7 they optimized in the best way that they could
8 be. So I'm looking forward to that. I think
9 that that could really help our spend, it could
10 help our communities, and it may help access,
11 too.

12 Something I keep coming back to,
13 which really was highlighted by the RAND report,
14 is -- we have this standard, we have Medicare.
15 They look at their -- what they pay people, what
16 they pay providers for each and every code every
17 single year, and they make revisions and they --
18 they give certain providers more or less, you
19 know, based on what codes they have.

20 But looking at a percent of
21 Medicare could really make sense, whether it's
22 for community providers, for wellness visits, for
23 things that we want to incentivize that we might
24 pay a higher percent of Medicare for that, for
25 outpatient or professional fees -- for things

1 that we want to, you know, disincentivize we
2 could pay a lower percent. But when you hear
3 things like, you know, a community provider might
4 get 150 percent of Medicare for a wellness visit,
5 but you know, a hospital might get, you know,
6 400-plus percent for a professional fee, you
7 know, you can start to think of a way to move
8 reimbursements from one area to another so that
9 we're really supporting community providers,
10 primary care, and wellness.

11 MS. HOLMES: Reference-based
12 pricing? Okay. I thank you for that.

13 And I think I will pass it along
14 back to you, Mr. Barber.

15 MR. BARBER: Okay.

16 Chair Foster.

17 CHAIR FOSTER: Good afternoon, Dr.
18 Weigel. Exhibit 1, page 23. There's a chart of
19 the reimbursement changes.

20 DR. WEIGEL: Yes.

21 CHAIR FOSTER: And from the chart,
22 it indicates that the non-hospitals, with whom
23 Blue Cross contracts, did slightly better in
24 terms of the reimbursement changes in these -- in
25 this period of time; is that correct?

1 DR. WEIGEL: That looks correct.

2 CHAIR FOSTER: And from my
3 understanding, that is different than prior
4 years.

5 DR. WEIGEL: I believe so. I
6 don't have prior years' data in front of me.

7 CHAIR FOSTER: I guess my question
8 is why is that. What sort of led to the non-
9 hospitals receiving slightly -- slightly greater
10 reimbursement increases as opposed to the
11 hospital system?

12 DR. WEIGEL: This would probably
13 be a better question for Martine with that data
14 because I did not prepare this table.

15 CHAIR FOSTER: Okay. I can ask
16 her. And maybe this one is better for her as
17 well, but I'll ask it. Last year, the Board's
18 Blue Cross order said something to the effect
19 that Blue Cross needed to consider access,
20 quality, and affordability in its rate
21 negotiations. Could you speak to how Blue Cross
22 did that?

23 DR. WEIGEL: That also might be a
24 better discussion with Martine and Ms. Greene.

25 CHAIR FOSTER: I'm going to find

1 one for you.

2 DR. WEIGEL: Okay.

3 CHAIR FOSTER: Quality. How does
4 Blue Cross -- what kind of -- what do you look at
5 when you're evaluating quality of providers in
6 Vermont?

7 DR. WEIGEL: Sure. We have a
8 number of different ways that we do that. We
9 actually have member assessments, you know, of
10 our own providers' quality. We look at quality
11 data around -- I think the examples I had given
12 before were, you know, around control of diabetes
13 or hypertension. So those are quality metrics we
14 have. But a lot of these are things that we do
15 for HIDAs, and so I can certainly send more
16 information about quality, and HIDA measures for
17 that. We also have -- I think I referenced it
18 last year in this hearing, but we have some newer
19 reports from the Blue Cross Association that
20 looks at the quality of our providers versus
21 national providers within -- with other Blue
22 Cross Blue card data and also data from payers
23 like Cigna and United. So we -- we look at
24 quality through that, too.

25 CHAIR FOSTER: That's one area

1 where the Board is working on improving our work
2 is on the quality. So anything you guys can
3 share on that, we can talk offline out of this
4 process. That would be helpful. And you said
5 something about the quality in Vermont being, I
6 think you said generally solid. What did you
7 mean by that?

8 DR. WEIGEL: You know, when we --
9 when we do things like this ECPC value-based
10 project and when we work really closely with, you
11 know, the four practices that we have in our
12 Vermont Blue integrated care VBP, value-based
13 project, you know, we generally see that the
14 providers are scoring pretty well on the quality
15 metrics, and you know, that we -- we generally
16 don't encounter providers where we have a lot of
17 concern about quality across the Board.

18 So I think overall, compared to
19 other states, you know, we have a good level of
20 quality of care from our providers. You know, I
21 think I've heard that from many different sources
22 and was also talked about in the legislature that
23 we have a little bit more of an access problem
24 than a quality problem, and we definitely have a
25 cost problem.

1 CHAIR FOSTER: In your prefiled
2 testimony and in Exhibit 12, there is discussion
3 of some of the high costs of our hospital system
4 here in Vermont. And you know, sort of the sense
5 I'm getting in this hearing is that we -- we
6 should -- the argument is we should approve the
7 rates because you need it for RBC and solvency
8 and the costs are just so extreme, and it seems
9 like the costs are really extreme because they're
10 going up and their utilization is going up.

11 And my understanding of healthcare
12 reform is it's really designed to one, focus on
13 preventative care, so costs go down; and two,
14 focus on moving care out of expensive places to
15 less expensive places.

16 And I think with Member Holmes,
17 you discussed the open MRI. And so I was
18 wondering if -- what can be done there on the
19 Blue Cross side. And I know you have Exhibit B,
20 but I was hoping you could speak a little bit
21 more to what an insurer, like yourselves, can do
22 to -- to drive that.

23 DR. WEIGEL: Yes. I mean, we
24 did -- we made that move with open MRI. You
25 know, imaging is -- is high cost, and there's

1 very high cost facilities doing imaging and open
2 MRI was lower cost. You know, we -- we are
3 make -- we are -- for laboratory work, there's a
4 similar dynamic. And so you know, some places
5 have very high lab costs, other places fairly
6 low, especially if, let's say, a primary care
7 practice in Plainfield has their own lab that
8 they've, you know, worked really hard to build
9 up.

10 So you know, we'd like to
11 incentivize using more community labs like that,
12 and so with our ECPC value-based project, we
13 built an incentive in for providers to refer
14 members to lower cost imaging and lower cost
15 laboratory services.

16 You know, I think the other thing
17 that is -- you know, I will acknowledge -- is
18 that, you know, prior authorizations are going to
19 be removed for primary care providers in 2025.
20 And you know, there's hope that this will reduce
21 provider burden. Some of that expense is built
22 into the rate increase, I think, as you saw, but
23 ideally this will attract more, you know, primary
24 care providers to our state, you know, who want
25 to practice. And if we can shift some of the

1 reimbursements to those providers, that would
2 help, too.

3 CHAIR FOSTER: There is a
4 suggestion that affordability is measured by
5 whether or not the rate is enough for solvency
6 without being excessive. And I struggle with
7 that because to me, that sounds like you could
8 make the rate increase 50 percent. And so long
9 as Blue Cross wasn't obtaining additional
10 unnecessary funds from that, that would be
11 affordable -- or one hundred percent or triple.
12 And I don't know that that works. All right?

13 So I think based on these rate
14 increases, it would be -- I calculated it for a
15 silver plan, I think they're around \$33,000 right
16 now without subsidies for a family of four. So
17 20 percent, you're looking at 600, \$700 a month
18 more for a family of four. And BMW 5 Series
19 lease is \$695 a month. So it's nearly equivalent
20 to leasing a BMW every single year, and that --
21 that just can't be affordable. It's just -- I
22 don't know that many people, that many BMWs in
23 their driveway, but it's not.

24 DR. WEIGEL: Sure. And so you
25 know, I mean, I -- I was a -- before I came to

1 Blue Cross, I was in the QHP market with a family
2 of four, so that's impactful. And I just got my
3 Town of Fayston property tax bill that I thought
4 I was actually making monthly payments toward
5 to -- to pay it off, but it's still pretty hefty
6 and has gone up quite a bit.

7 I think affordability is going to
8 be a difficult topic in these meetings if it's
9 not really clearly defined. And -- and maybe
10 affordability is the, the percent of Vermonters
11 uninsured because they choose not to buy it.
12 Maybe it's the percent of Vermonters who rate
13 themselves as underinsured or medically,
14 financially stressed or in debt because of
15 medical debt. You know, those are all numbers
16 that are out there, but that's not really how
17 it's defined, but that -- you know, those are
18 ways to think about affordability in my mind.

19 CHAIR FOSTER: Yeah. They're --
20 they're indicators that something's going --
21 right. Are you -- are you seeing any of that?
22 Are you seeing people buying down to lower levels
23 of insured -- insurance products with Blue Cross?

24 DR. WEIGEL: I don't have that
25 data in front of me.

1 CHAIR FOSTER: Okay.

2 DR. WEIGEL: But we do have that
3 data.

4 CHAIR FOSTER: I don't have any
5 other questions. Yeah. I got about fifteen
6 percent of the right questions for you. All
7 right. Thank you.

8 MR. BARBER: Mr. Donofrio, any
9 redirect?

10 MR. DONOFRIO: No. Thank you.

11 MR. BARBER: Okay. I did -- I did
12 hear a question for Ruth Greene from Dr. Murman,
13 and I don't think we'll be coming back to her
14 after the executive session, and it didn't sound
15 like confidential material. So I'm wondering if
16 she could be available to just get that squared
17 away real quick?

18 MS. ASAY: Hi. This is Bridget
19 Asay. Yes. Ms. Greene is on the line so she can
20 address that question.

21 MR. BARBER: Ms. Greene, did you
22 hear Dr. Murman's question about Exhibit 26 and
23 the equity gains and losses on the VBA business?

24 MS. GREENE: Yes, I did.

25 MR. BARBER: And could you try to

1 answer that as best you can?

2 MS. GREENE: Sure. That line
3 noted equity gains and losses in parentheses.
4 VBA, that is the 49 percent share of the joint
5 venture that we have to enter the Medicare
6 Advantage market. And the first year we started
7 selling Medicare Advantage plans was 2021. The
8 cost in 2020 were the implementation costs to get
9 set up for open enrollment and do the bid and all
10 of that for that book of business. And the
11 numbers shown in '21, '22, and '23 is the Blue
12 Cross Vermont share of the losses in that line of
13 business.

14 The losses grew in 2022 and '23,
15 both due to membership growth at a loss, and also
16 because of the unplanned-for higher medical cost
17 escalation that we've been talking about on the
18 commercial business. I hope that gets at the
19 question. If not, happy to elaborate further.

20 MR. BARBER: Dr. Murman, do you
21 need any elaboration?

22 DR. MURMAN: So -- so I just want
23 to clarify. So the cumulative loss of the
24 Medicare Advantage program so far is about just
25 over \$43 million?

1 MS. GREENE: Yes, over four years.

2 DR. MURMAN: And that money has
3 effectively come out of member reserves to fund
4 that; is that accurate?

5 MS. GREENE: Yes, whenever we
6 enter a new market and grow business, it would --
7 it would put a drain on reserves.

8 DR. MURMAN: Okay. And just to
9 clarify, and I -- you said it's a joint venture.
10 Who's the joint venture with?

11 MS. GREENE: It's with our new
12 affiliation partner, Blue Cross Blue Shield of
13 Michigan. Prior to the affiliation, we were
14 partnering with them to enter the Medicare
15 Advantage market.

16 DR. MURMAN: Okay. And is the --
17 what is the current plan for this? Is it to
18 continue -- continue this product line?

19 MS. GREENE: That is something
20 that we are prepared to talk about in executive
21 session. We have some plans in this line of
22 business, but it's a highly competitive market,
23 and moving into 2025 would be sensitive
24 information.

25 DR. MURMAN: Okay. Thank you.

1 MR. BARBER: Yeah. Thank you for
2 taking that out of turn. So --

3 CHAIR FOSTER: I have a follow up
4 on that.

5 MR. BARBER: Oh. Okay.

6 CHAIR FOSTER: So how much RBC is
7 \$43.4 million?

8 MS. GREENE: I can do the math for
9 you.

10 CHAIR FOSTER: I think you said 10
11 million is 33 RBC points?

12 MS. GREENE: So 100 and --
13 sorry -- 140 points. When we entered that
14 market, we planned on investing about 100
15 percentage points of RBC. We knew that it was
16 going to cost something, so it cost us more as a
17 business, but you know, we do -- we've been very
18 pleased with the acceptance of that market.
19 We've got 15,000 members and about 7,000 of those
20 are group members, including Vermont teacher
21 retirees, as well as 8,000 individuals that we're
22 serving in that market.

23 CHAIR FOSTER: So one of the
24 messages throughout this hearing has been that,
25 you know, it's -- I didn't take it like a

1 offensively in any way whatsoever. It's a --
2 it's a fair discussion and it's an important
3 discussion, but sort of some of the language
4 around underfunding. But it seems like there's
5 pretty big losses from the Medicare Advantage
6 program.

7 And I can't say, you know, it's
8 underfunding and then see, like, huge losses in
9 another line of business. Is it the underfunding
10 or is it the loss in the other lines of
11 businesses? And there's many factors, right?
12 Like there's overages, which are also costing a
13 lot of money, but I think it's -- I think it's
14 more nuanced than simply underfunding.

15 MS. GREENE: Yeah. I think if I
16 come back to the general point about the -- the
17 first order of business is to have premiums that
18 are going to cover the cost of the healthcare for
19 those members and the expenses, and that we need
20 funded premiums. It's -- it's the same for
21 Medicare Advantage. We do have to turn that
22 around --

23 CHAIR FOSTER: Sure.

24 MS. GREENE: -- but the main focus
25 here is the QHP market.

1 CHAIR FOSTER: Thanks.

2 MR. BARBER: Ms. Asay, do you have
3 anything you want to follow up with around this?
4 I know we took -- took a detour here, but.

5 MS. ASAY: No, I think we're good.

6 MR. BARBER: Okay. Then I
7 think -- I don't think we were on the record when
8 we had this conversation, so I'll just -- I'll
9 say it on the record. Blue Cross had suggested
10 that we swear in Ms. Brisson-Lemieux in the event
11 that when we get into executive session, that
12 there are questions that would be best suited for
13 her to answer. So I'll do that now, and then
14 we'll kind of go through the mechanics of going
15 into an executive session. So Ms. Lemieux, are
16 you -- are you with us?

17 MS. BRISSON-LEMIEUX: I am.

18 MR. BARBER: Okay.

19 Whereupon,

20 MARTINE BRISSON-LEMIEUX,
21 a witness called for examination by counsel for
22 the Board, was duly sworn, and was examined and
23 testified as follows:

24 MR. BARBER: Thank you. So just
25 to remind everybody the -- the open meeting law

1 has an exemption or a couple actually exemptions
2 that could apply to the topics that I think are
3 intending to be covered here, but there's also
4 our rate review statute, which is pretty --
5 pretty broad.

6 So it says, "Notwithstanding the
7 open meeting law, the Board may examine and
8 discuss confidential information outside a public
9 hearing or meeting". So that would -- that would
10 be really any of the blue highlighted information
11 in the binder and the confidential topics to
12 which they relate.

13 So that would be -- you know, I
14 think we've identified a prospective solvency
15 assessments, some detailed provider contracting
16 information, and I think some of the -- DFR has
17 its own unique confidentiality provisions around
18 some of their assessments.

19 So that would be what I would
20 expect to be covered in an executive session
21 here. And so would anybody like to make a motion
22 to go into executive session to consider
23 confidential information under our review
24 statute?

25 MS. LUNGE: I move we go into

1 executive session to consider confidential
2 information under the rate review statute.

3 MR. BARBER: Is there a second?
4 All those in favor, please signify by saying aye.

5 IN UNISON: Aye.

6 MR. BARBER: Okay. So just to
7 remind you that if you have any questions
8 about -- so really this is -- needs to be limited
9 to information that is confidential. If there's
10 any questions about what is confidential that
11 arise, we can talk through that and kind of move
12 to the public session, anything that needs to be
13 done there.

14 In terms of who should go over to
15 the executive session, I think pretty much anyone
16 that got the invite, so the parties and their
17 representatives, the Board members, Board staff,
18 Department of Financial Regulation folks, court
19 reporter, Blue Cross and its representatives and
20 I think I got everybody, but does everyone -- is
21 everyone clear on who should be moving over?
22 Okay. I don't hear any questions. So then why
23 don't we leave this. Call into the executive.

24 (Recess at 2:01 p.m. until 3:43 p.m.)

25 THE COURT REPORTER: We are now

1 going back on the record. The time is 3:43 p.m.

2 MR. BARBER: And we just finished
3 an executive session and now turn it to Blue
4 Cross to call their next witness.

5 MR. DONOFRIO: Thank you, Mr.
6 Barber. I apologize, we just need a minute.
7 Martine Brisson-Lemieux is just moving from one
8 office and basically she's switching seats with
9 Dr. Weigel. So she's just on her way. That's
10 how we have to configure due to the Teams setup,
11 so we just need a moment.

12 MR. BARBER: Okay. Yeah, just let
13 me know.

14 MR. DONOFRIO: Yeah. Thank you.

15 (Pause)

16 MR. DONOFRIO: Thank you. We're
17 ready. May I proceed?

18 MR. BARBER: Yes.

19 MR. DONOFRIO: Okay. Thank you.

20 Ms. Lemieux, will you please state
21 your name and your current position for the
22 record?

23 MS. BRISSON-LEMIEUX: My name is
24 Martine Brisson-Lemieux, and I'm the chief
25 actuary at Blue Cross Blue Shield of Vermont.

1 MR. DONOFRIO: And how long have
2 you been at Blue Cross?

3 MS. BRISSON-LEMIEUX: I joined the
4 Blue Cross actuarial team in 2009.

5 MR. DONOFRIO: Did you prepare and
6 submit pre-filed testimony for this proceeding?

7 MS. BRISSON-LEMIEUX: I did.

8 MR. DONOFRIO: Would you identify
9 your pre-filed testimony by exhibit number?

10 MS. BRISSON-LEMIEUX: Yes, my July
11 12th prefiled testimony is Exhibit 18, and my
12 July 16 supplemental prefiled testimony is
13 Exhibit 21.

14 MR. DONOFRIO: Was all of the
15 testimony contained in Exhibit 18 and Exhibit 21
16 true and correct to the best of your knowledge at
17 the time you submitted it?

18 MS. BRISSON-LEMIEUX: Yes.

19 MR. DONOFRIO: And is that still
20 true today?

21 MS. BRISSON-LEMIEUX: Yes.

22 MR. DONOFRIO: Thank you. Were
23 you responsible for preparing the Blue Cross 2025
24 individual and small group rate filings that are
25 the subject of this proceeding?

1 MS. BRISSON-LEMIEUX: Yes.

2 UNIDENTIFIED SPEAKER:

3 (Indiscernible).

4 MR. DONOFRIO: What was that?

5 Okay. You can proceed.

6 MS. BRISSON-LEMIEUX: Yes. I was
7 actively involved in the preparation of the
8 filings, and I am fully familiar with all aspects
9 of the filings and the underlying rate
10 developments.

11 MR. DONOFRIO: And did you certify
12 the filing?

13 MS. BRISSON-LEMIEUX: I did. And
14 at the time of filing, I certified that they meet
15 all relevant actuarial standards of practice,
16 that they comply with applicable state and
17 federal law and regulations, and with the
18 revision included in my supplemental prefiled
19 testimonies, that certification holds true today.

20 MR. DONOFRIO: And were you
21 responsible for preparing the information and
22 responses that Blue Cross had submitted to the
23 questions Blue Cross has received from the Board,
24 from Lewis & Ellis, and from the Health Care
25 Advocate?

1 MS. BRISSON-LEMIEUX: Yes. All
2 the information was either prepared under my
3 supervision or by other Blue Cross departments.
4 I am fully aware -- I am familiar with all the
5 aspects and the material and can answer questions
6 related to the methodologies and the functions in
7 the filings.

8 MR. DONOFRIO: Thank you. Please
9 turn to Exhibit 12, which is the July 12th
10 responses to questions from the Board, from Lewis
11 & Ellis, and the HCA, and turn to page 11. Tell
12 me when you're there.

13 MS. BRISSON-LEMIEUX: I am there.

14 MR. DONOFRIO: Do you see the
15 heading, "Response to May 28 L & E question and
16 June 20 HCA question"?

17 MS. BRISSON-LEMIEUX: Yes.

18 MR. DONOFRIO: Would you please
19 summarize what's being asked in the --

20 MS. BRISSON-LEMIEUX: The
21 questions were asking about our projected RBC for
22 2024 and 2025.

23 MR. DONOFRIO: And are you
24 familiar with the response that follows?

25 MS. BRISSON-LEMIEUX: Yes.

1 MR. DONOFRIO: And are you aware
2 that certain information in that response has
3 been deemed confidential by the Board?

4 MS. BRISSON-LEMIEUX: Yes.

5 MR. DONOFRIO: Without disclosing
6 any confidential information, would you please
7 describe the modeling process in general terms
8 that led to the RBC projections?

9 MS. BRISSON-LEMIEUX: So we have
10 two ways that we can project future financial
11 results. First, we can do it deterministically
12 or stochastically. In a deterministic model, we
13 determine specific values for the assumptions,
14 like membership, medical trust, investment
15 return, and then we put all of those pieces
16 together and we calculate, say, risk-based
17 capital at a certain date.

18 In a stochastic modeling, we still
19 define the most likely result for each
20 assumption, but then we put a range of possible
21 outcomes for the distribution around the material
22 assumptions. And then we run the model 10,000
23 times, which is an enormous amount of time, so
24 that the model can randomly select for each
25 assumption within the range following the

1 distribution, the different assumption, and that
2 way we have an output that is a range of results
3 and a probability distribution within that range.

4 MR. DONOFRIO: And which type of
5 modeling did you use in generating the RBC
6 projections that you've provided during this
7 year's rate review process?

8 MS. BRISSON-LEMIEUX: So we did
9 both. So we started with a deterministic model
10 to set our best estimate, and then we moved on
11 and created the stochastic modeling, that created
12 the ranges around each of the material
13 assumptions. And we believe that looking at the
14 stochastic results is a more useful information
15 in this proceeding.

16 MR. DONOFRIO: Why do you think
17 that? Why do you think stochastic is more
18 useful?

19 MS. BRISSON-LEMIEUX: The
20 stochastic model, first it gives us a range of
21 outcome. We know that there's a lot that goes
22 into RBC and all the different components can
23 vary. It also gives us probabilities of being
24 above or below a certain range or a certain
25 threshold. And also, it takes into account all

1 the variables.

2 MR. DONOFRIO: Is this the first
3 time you've used stochastic modeling for this
4 purpose?

5 MS. BRISSON-LEMIEUX: No. This is
6 the third year we've created this kind of model
7 for rate review.

8 MR. DONOFRIO: Okay. Changing
9 gears a bit, have you had a chance to review
10 Lewis & Ellis' analysis of the filings which are
11 Exhibits 14 and 15 in the binder?

12 MS. BRISSON-LEMIEUX: Yes.

13 MR. DONOFRIO: Would you please
14 turn to page 23 of Exhibit 14 and tell me when
15 you're there.

16 MS. BRISSON-LEMIEUX: I'm there.

17 MR. DONOFRIO: Is it correct that
18 Lewis & Ellis recommended six changes to the
19 proposed individual rates?

20 MS. BRISSON-LEMIEUX: Yes.

21 MR. DONOFRIO: And if you would
22 flip to page 22 of Exhibit 15.

23 MS. BRISSON-LEMIEUX: I am there.

24 MR. DONOFRIO: L & E recommended
25 five changes to the proposed small group rates,

1 right?

2 MS. BRISSON-LEMIEUX: Yes.

3 MR. DONOFRIO: And those five are
4 also made in Exhibit 14 with respect to the
5 individual rates, right?

6 MS. BRISSON-LEMIEUX: Yes.

7 MR. DONOFRIO: What is the sixth
8 recommendation that's specific to the individual
9 rates?

10 MS. BRISSON-LEMIEUX: To modify
11 our application of the silver load methodology,
12 and silver loading only exists in the individual
13 market.

14 MR. DONOFRIO: And does Blue Cross
15 agree that L & E's recommendations should be
16 adopted in both markets?

17 MS. BRISSON-LEMIEUX: Yes.

18 MR. DONOFRIO: If you could turn
19 to Exhibit 21, your supplemental prefiled
20 testimony.

21 MS. BRISSON-LEMIEUX: Yes.

22 MR. DONOFRIO: At pages 1 and 2,
23 does your supplemental pre-filed testimony still
24 accurately reflect Blue Cross' position with
25 respect to L & E's recommendations in both

1 filings?

2 MS. BRISSON-LEMIEUX: Yes, it
3 does.

4 MR. DONOFRIO: Beyond Lewis &
5 Ellis' recommendations, is Blue Cross proposing
6 any other changes to the originally filed rates?

7 MS. BRISSON-LEMIEUX: Yes. We are
8 proposing two changes. First, some of our -- so
9 New Hampshire Hospital, with whom we contract
10 directly, have July 1st renewal dates. So we now
11 have actual negotiated rates for July 1st, 2024.
12 So incorporating those final contract terms and
13 assuming that the next renewal will look like the
14 2024 renewal, that decreases the proposed rates
15 by 0.2 percent. The second one is that we are
16 now requesting a seven percent contribution to
17 reserve, which is an increase of four percent
18 from the original filing.

19 MR. DONOFRIO: If you would turn
20 now to page 5 of Exhibit 21, your supplemental
21 prefile.

22 MS. BRISSON-LEMIEUX: Yeah.

23 MR. DONOFRIO: Please explain what
24 that table shows.

25 MS. BRISSON-LEMIEUX: So the table

1 shows the incremental impact of L & E's
2 recommendation, except for the update in benefits
3 and the change in silver load methodology because
4 those don't have an impact on the average rate.
5 It also shows the two changes I just talked
6 about.

7 MR. DONOFRIO: If you would focus
8 for a moment on the fifth row of the table that
9 shows the impact of updating medical costs trends
10 for Vermont hospitals, that was one of L & E's
11 recommendations, right?

12 MS. BRISSON-LEMIEUX: Right.

13 And --

14 MR. DONOFRIO: Oh, go ahead.

15 MS. BRISSON-LEMIEUX: Yeah. So
16 this reflects the hospital budget submitted as
17 known on July 16th.

18 MR. DONOFRIO: So if the -- so
19 just looking at the numbers on the table, if the
20 unit cost trend were set to the hospital
21 submissions, rates would increase by about one
22 percent in the individual market and about 0.9
23 percent in small group?

24 MS. BRISSON-LEMIEUX: That's
25 correct. That's the value of the change between

1 what we assumed in the original filings for cost
2 funds for FY25 and what is in the submitted
3 hospital budgets.

4 MR. DONOFRIO: And is it Blue
5 Cross' position that those numbers should be used
6 for the final approved rates?

7 MS. BRISSON-LEMIEUX: No. Our
8 position is that we will apply whatever
9 percentage reduction that the Green Mountain Care
10 Board directs us to use for the hospital budgets
11 for FY2025. Just as a reference point, a ten
12 percent -- ten percent reduction in the
13 commercial rates increase, so a ten percent
14 becomes a nine percent, would reduce our rates by
15 about 0.2 percent.

16 MR. DONOFRIO: And why didn't you
17 make a specific assumption about the Green
18 Mountain Care Board's percentage reduction of the
19 current hospital budget?

20 MS. BRISSON-LEMIEUX: Because over
21 the past two years, the Board has reduced
22 hospital budgets by seventeen percent two years
23 ago and fifty percent last year. And given the
24 variance in those results, we decided not to
25 select and assume reduction for this table.

1 MR. DONOFRIO: So do the final
2 proposed rate increases shown at the bottom of
3 the table on page 5 of Exhibit 21 represent Blue
4 Cross' final proposed rate changes?

5 MS. BRISSON-LEMIEUX: Almost, but
6 not quite. Again, the final rates should include
7 whatever the Board tells us to reduce the
8 hospital budget by.

9 MR. DONOFRIO: And have you
10 acquired any information since submitting your
11 prefile -- your supplemental prefile testimony
12 that bears on this topic?

13 MS. BRISSON-LEMIEUX: Yes. I now
14 know that there has been amended hospital budget
15 requests.

16 MR. DONOFRIO: And when did you
17 find that out?

18 MS. BRISSON-LEMIEUX: Earlier
19 today.

20 MR. DONOFRIO: During this
21 hearing?

22 MS. BRISSON-LEMIEUX: Yes.

23 MR. DONOFRIO: Have you had a
24 chance to process that information and assess its
25 impact on the proposed rate?

1 MS. BRISSON-LEMIEUX: No.

2 MR. DONOFRIO: And will you do
3 that?

4 MS. BRISSON-LEMIEUX: Yes.

5 MR. DONOFRIO: Okay. If you would
6 turn to page 3 of Exhibit 1, the actuarial
7 memorandum.

8 MS. BRISSON-LEMIEUX: I am there.

9 MR. DONOFRIO: Section 1.3 on page
10 3 lays out the laws, rules, regulations, and
11 other legal authorities that the filings must
12 comply with, right?

13 MS. BRISSON-LEMIEUX: Yes.

14 MR. DONOFRIO: And in your
15 professional opinion, do the filings comply with
16 those requirements?

17 MS. BRISSON-LEMIEUX: Yes.

18 MR. DONOFRIO: And if you would
19 flip to page 8 of Exhibit 1. Section 1.8 that
20 begins on page 8 addresses the Vermont statutory
21 criteria that guides the Board's review, right?

22 MS. BRISSON-LEMIEUX: Yes.

23 MR. DONOFRIO: In your
24 professional opinion, do the fillings comply with
25 those criteria?

1 MS. BRISSON-LEMIEUX: Yes, they
2 do.

3 MR. DONOFRIO: Thank you. I have
4 no further questions.

5 MR. BARBER: Eric? You ready?

6 MR. SCHULTHEIS: Yeah, thank you,
7 Mr. Barber.

8 Hi Ms. Lemieux, how are you?

9 MS. BRISSON-LEMIEUX: I'm well.
10 How are you?

11 MR. SCHULTHEIS: Hanging in there.
12 So would you turn to Exhibit 12, page 14. I just
13 have a few questions. And I promise I will avoid
14 the confidential part. Just because I can't
15 resist asking fellow numbers -- people numbers
16 questions. I was going to say nerds, but I
17 changed that, Ms. Lemieux. So you list the
18 things that are stochastically modeled, the
19 various lines of business in that claims portion,
20 so the top portion, correct?

21 MS. BRISSON-LEMIEUX: Yes.

22 MR. SCHULTHEIS: And then you kind
23 of list out what the assumptions are for '24 and
24 '25, right?

25 MS. BRISSON-LEMIEUX: Yes.

1 MR. SCHULTHEIS: And I'm just
2 guessing, and I don't think this gets -- this
3 really doesn't, but like, some weight, some
4 assumptions that get you in the -- that feed into
5 the stochastic model differ and some are the
6 same, yeah?

7 MS. BRISSON-LEMIEUX: Yes.

8 MR. SCHULTHEIS: Okay. That's all
9 my questions. Thank you.

10 MR. BARBER: Ms. Beliveau, any
11 questions for Ms. Lemieux?

12 MS. BELIVEAU: No questions.
13 Thank you.

14 MR. BARBER: Board Member Walsh?

15 MR. WALSH: Thank you.

16 And good afternoon, Ms. Lemieux.
17 My question is in regards to the table in Exhibit
18 1 on page 23 of the filing.

19 MS. BRISSON-LEMIEUX: Yes.

20 MR. WALSH: I asked it earlier
21 this morning and your name came up as someone who
22 might be able to answer. I'm trying to
23 understand the ramifications of this table or the
24 implications where fifty-four percent of claims
25 in '23 were made by GMCB regulated entities,

1 forty-six percent, not. And the forty-six
2 percent seem to be growing faster. Those -- and
3 is that due only to cost, meaning price, from
4 those entities? Or does that also include
5 utilization and diagnostic intensity?

6 MS. BRISSON-LEMIEUX: So this
7 particular table is cost trend only.

8 MR. WALSH: Okay.

9 MS. BRISSON-LEMIEUX: And I want
10 to point out, because I've been thinking about it
11 today, that the cost trends for Green Mountain
12 Care Board regulated hospital from '24 to '25,
13 that it says 3.5 percent, right, that is what we
14 included in filing, which for the Vermont
15 Hospital we had assumed that they would follow
16 the Green Mountain Care Board guidance. And just
17 as a point for you, when that number with the
18 updated hospital budgets that I knew on July
19 16th, that number becomes 5.7. So just a data
20 point.

21 MR. WALSH: Yeah.

22 MS. BRISSON-LEMIEUX: For your
23 questions around utilization and intensity,
24 right, we do that separately in the filing. I
25 don't have -- we don't split out in our

1 projection of trend if it's a Vermont Hospital or
2 a non-Vermont hospital. We do it in total. What
3 we have seen, sort of, come out of 2024, right,
4 is that we are seeing both increases in
5 utilization and increases in intensity or --
6 which intensity is also known as, like, the mix
7 of services, right, within a broad category.

8 MR. WALSH: Uh-huh. Yes. And I
9 think there's been some lack of clarity. Member
10 Murman and I have been asking questions about
11 diagnostic intensity with Medicare CMI, the case
12 mix index and if in last year's hospital budget
13 hearings we were presented with information that
14 some hospitals would be trying to increase their
15 case mix index to and in their opinion, more
16 accurately reflect the illness severity of their
17 population.

18 And so I'm trying to better
19 understand what's driving the April and May surge
20 and what's driving the increase in claims
21 overall. And my understanding is that would be a
22 mix of the utilization of services, the price of
23 each service, and the diagnostic intensity
24 associated with each service. Am I thinking
25 about that correctly?

1 MS. BRISSON-LEMIEUX: Yes. And I
2 would add to that, and I'm now understanding when
3 you mean the diagnostic intensity, it's -- I'm --
4 it -- you are referring to how it is coded,
5 right --

6 MR. WALSH: Um-hum.

7 MS. BRISSON-LEMIEUX: -- versus
8 what we see also as intensity is different
9 services. And I'm not a clinical person but you
10 know, increases and more intensive office visits
11 for example, right? So that's intensity as well.

12 MR. WALSH: Um-hum.

13 MS. BRISSON-LEMIEUX: What's
14 difficult with what's going on in March and
15 April, and May, is that with claims run out,
16 right? So in -- here we sit in July, right?
17 Claims that are paid through July. But really
18 they are for services that are a few months old
19 at this point. And it's difficult to go into
20 that level of detail with no run out because
21 facility claims, for example, take at least two
22 months to be like, ninety percent there.

23 MR. WALSH: Uh-hum.

24 MS. BRISSON-LEMIEUX: So I don't
25 have good answers for you yet, but it is

1 something we are focused on. We have like
2 working groups that are trying to figure it out.
3 I do have a couple data points to share that I
4 think might answer part of your question. On the
5 inpatient side, what I'm seeing is that, and
6 admissions are up two percent. So year ended
7 April 24th to year ended April 23rd. Admissions
8 are up two percent, but our average length of
9 stay is up seventeen percent. Now, I don't know
10 why, but that is a driver, right? The more days
11 you are in, that will be a driver of increased
12 cost.

13 MR. WALSH: Um-hum.

14 MS. BRISSON-LEMIEUX: I can
15 also see that on the outpatient side, right, we
16 talked about how outpatient seems very expensive
17 compared to other things. We have a number of
18 visits, which is up four and a half percent, but
19 the number of services and you can have more than
20 one service per visit.

21 MR. WALSH: Yes.

22 MS. BRISSON-LEMIEUX: That is up
23 eight percent. So what we're seeing is that in a
24 visit, there appears to be more services done,
25 right. And so that comes through sort of in the

1 intensity. I don't have the why, but I have the
2 sort of data points with -- and with that we can
3 sort of send our teams to dig into finding out
4 the why, but it takes some time.

5 MR. WALSH: Yeah. The -- it does.
6 I understand, and I appreciate that. As I'm sure
7 you are aware, there have been concerns about
8 increasing diagnostic intensity without
9 corresponding increases in actual morbidity. And
10 so trying to tease that out would be helpful
11 because I'm concerned.

12 I do not want to try to cap or
13 limit necessary utilization or disincentivize
14 appropriate coding for more severe illness. But
15 I'm receiving messages of -- of more severity and
16 a need for more services at the same time after
17 four years hearing how healthy Vermonters are.
18 And yes, we've come through a pandemic and
19 there's some -- I think it's important to just
20 build systems that will allow us to explore these
21 issues so that --

22 MS. BRISSON-LEMIEUX: Yes.

23 MR. WALSH: -- we address -- we
24 address the right drivers.

25 MS. BRISSON-LEMIEUX: Yeah.

1 MR. WALSH: And so --

2 MS. BRISSON-LEMIEUX: And I share
3 your concern. The one thing I will say is that
4 splitting, right, coding efficiencies from actual
5 morbidity changes is very complicated. And so to
6 the extent we can find things we will share with
7 the Board, but there may not be sufficient
8 evidence for us to say absolute one way or the
9 other.

10 MR. WALSH: Yeah. I'll keep
11 thinking about that. I think because of the -- a
12 fair proportion of Vermonters with Blue Cross
13 coverage receive care outside of Vermont, the
14 borders may provide an instrument to help examine
15 that issue.

16 MS. BRISSON-LEMIEUX: I'm going to
17 make a note. That's a really good point.

18 MR. WALSH: And that similarly
19 the -- the fifty-four percent versus forty-six
20 percent from that table, trying to understand if
21 there are similar drivers across the state for
22 regulated entities and nonregulated. If
23 Vermonters are getting sick, the numbers
24 should -- sicker, the numbers should be going up
25 regardless of whether somebody is regulated or

1 not.

2 If something else is driving the
3 changes -- that something else could be something
4 about trying to adjust to being regulated. Then
5 we would see differences in the regulated
6 entities versus the non-regulated entities. That
7 would be independent of health status. So we
8 could -- so those are the things I'm trying to
9 think through. And I hope that that makes sense.
10 And thank you for listening to the questions.

11 MS. BRISSON-LEMIEUX: It made a
12 lot of sense. It gave me a lot of ideas.

13 MR. BARBER: Board Member Murman,
14 do you have questions?

15 MR. MURMAN: Yeah. Let's see
16 here. At the rate, page. I'm sorry. Let me
17 just -- I think I wrote down the wrong exhibit.
18 Let me just see if I can grab it. I apologize.
19 I can't get the -- for some reason I wrote down
20 the wrong one here.

21 But let me ask you the question in
22 general. What I'm trying to understand is in the
23 medical loss ratio on the medical side of the
24 calculation, and I can find this here. What --
25 what are --what components are on the medical

1 side of the MLS (phonetic) ratio that are not
2 direct claims payments?

3 MS. BRISSON-LEMIEUX: Okay. See I
4 believe you're asking about our Exhibit 8, which
5 is not binder Exhibit 8, but in the exhibit. And
6 so in the MLR calculation, right, claims include
7 the planned payment for fee for service, right,
8 capitation. It includes other provider payments
9 that we make, Blueprint, for example. And I'm
10 going to get them mixed up. But one of the two
11 healthcare tax goes into claims. I cannot
12 remember which of the two.

13 MR. MURMAN: Here we go. Exhibit
14 2, page 61, I think may be a helpful guide for
15 this.

16 MS. BRISSON-LEMIEUX: Right. So
17 in the -- the direct claims. That's right. So
18 the plan payment a fee for service capitation.
19 We have some of our program payments go into
20 claims things that we call non-system claims on
21 exhibit -- in the rate development go into here.
22 So that's all the claims that go into that
23 category.

24 MR. MURMAN: Okay. So if we just
25 talk through this table here, which is Exhibit 2,

1 page 61. First line is expected direct claims
2 PMPM, that's what you're expecting to pay out to
3 healthcare providers?

4 MS. BRISSON-LEMIEUX: Yes.

5 MR. MURMAN: Is there anything
6 else other than paying for providers or
7 pharmaceuticals that falls under direct claims
8 payments?

9 MS. BRISSON-LEMIEUX: I believe
10 that this is also net of rebates that we receive
11 from -- from -- from our PBM. But no, that would
12 be it with one of the healthcare claims tax that
13 I -- it's either the vital portion or the
14 healthcare claims tax portion. I cannot remember
15 which --

16 MR. MURMAN: Yeah. I think that's
17 in column -- the fifth or sixth column, taxes,
18 fees, PMPM.

19 MS. BRISSON-LEMIEUX: One of them
20 fall -- one of them gets bucketed as a claim in
21 so the healthcare claims tax, the 0.8 percent
22 gets actually bucketed as a claim in the MLR
23 calculation, while the other portion, the vital
24 portion, and I just got confirmation is in that
25 taxes and fee column. It's --

1 MR. MURMAN: Okay. Okay. So
2 the --

3 MS. BRISSON-LEMIEUX: -- MLR
4 rules, right, are a little different from kind of
5 our rating process for what the claim, what's the
6 tax, what's a fee.

7 MR. MURMAN: Okay. So to go
8 through this table, we have direct claims, which
9 is all claims minus P -- minus rebates from
10 pharmaceuticals and a 0.8 percent tax. Then risk
11 adjustment transfers is money that you get from
12 MVP because you have higher risk patients than
13 MVP --

14 MS. BRISSON-LEMIEUX: Yeah.

15 MR. MURMAN: I believe, right?
16 Then you pay two dollars per member, per month
17 for quality activities, which I assume this is
18 various quality activities, plus the prior
19 authorization stuff would fall under that amount.

20 MS. BRISSON-LEMIEUX: I'm not sure
21 exactly what falls under that, but yes. So under
22 the MLR rules, we are allowed to count a portion
23 that in other filing exhibits would go into the
24 administrative costs. You're allowed under the
25 MLR rules to move them to a claims expense.

1 MR. MURMAN: Okay.

2 MS. BRISSON-LEMIEUX: -- so they
3 don't hurt you meeting --

4 MR. MURMAN: Okay.

5 MS. BRISSON-LEMIEUX: -- the MLR
6 threshold because you're spending it on quality.

7 MR. MURMAN: So -- so what's the
8 difference? Then MLR claims is the claims paid
9 out, essentially?

10 MS. BRISSON-LEMIEUX: It's the sum
11 of the three columns before. So it's under
12 the --

13 MR. MURMAN: Got it.

14 MS. BRISSON-LEMIEUX: -- MLR
15 definition. Things that count as a claim.

16 MR. MURMAN: Okay. So when you do
17 the MLR ratio it's MLR claims divided by premium
18 PMPM? Well, I guess you have to check.

19 MS. BRISSON-LEMIEUX: By the MLR
20 premium. Yes.

21 MR. MURMAN: By the MLR premium?

22 MS. BRISSON-LEMIEUX: Yes.

23 MR. MURMAN: Because the taxes are
24 taken out of that. And that's where he gets to
25 ninety percent. Okay. I was just trying to

1 figure out, you know, -- let' discuss of your low
2 administrative costs. And if there's anything
3 baked into the medical side, that sort of was
4 something that I felt like I should need to
5 understand, but really, the -- it's basically
6 \$2.08, PMPM. Oh, there's one that's \$2.09, two
7 of them. That is the quality stuff that Blue
8 Cross does that you're allowed to put in the
9 medical side of MLR. And the rest of it is
10 either taxes or claims.

11 MS. BRISSON-LEMIEUX: Yes.

12 MR. MURMAN: Okay. Thank you.

13 Addressed a bunch of these. Can I just ask one
14 question on the length of stay? You just
15 mentioned something that sort of just sparked a
16 little interest of mine. But you say that when a
17 hospital -- when a patient stays in the hospital
18 for a longer period of time with an increased
19 length of stay, that generates a larger claim; is
20 that correct?

21 MS. BRISSON-LEMIEUX: It can.

22 Yes.

23 MR. MURMAN: Okay. Because often
24 we hear about length of -- long length of stays
25 leading to reduced revenue -- leading to cost

1 without additional revenue.

2 MS. BRISSON-LEMIEUX: That's
3 possible. It will depend on what the hospital
4 sort of reimbursement or payment right, is. If
5 it's under the DRG and the additional day does
6 not change the DRG, right, I can see that not
7 increasing the revenue. If it creates an outlier
8 because they are longer and there's more cost, so
9 it could increase costs.

10 It was just an interesting data
11 point that we have members who are --appear to
12 spend more time in patient without sort of the --
13 that's what I can see so far. So again, this is
14 like what we can see so far is happening, you
15 know, through April. And then we will kind of --
16 I will -- I've shared this information with our
17 clinical teams, and they will go and sort of
18 understand the details.

19 MR. MURMAN: Okay. There's only
20 one other thing I think you mentioned in your
21 testimony that the Board reduced hospital budgets
22 by seventeen⁷ percent one year and fifty percent
23 one year. I just want to clarify that that's --
24 the Board reduced the requested increases to the
25 commercial rate of the hospital budgets by

1 seventeen percent and fifteen percent, fifty
2 percent, but not they didn't reduce the hospital
3 budgets by those amounts. I just want to make
4 sure that that didn't get misquoted somewhere in
5 the world. But does that seem accurate to you?

6 MS. BRISSON-LEMIEUX: I appreciate
7 that. Yes.

8 MR. MURMAN: Okay.

9 MS. BRISSON-LEMIEUX: It is the
10 increases that were reduced.

11 MR. MURMAN: Okay. Thanks.
12 That's all I have right now.

13 MR. WALSH: That was my poorly-
14 phrased question. So thank you for clarifying.

15 MR. BARBER: Board member Lunge,
16 any questions?

17 MS. LUNGE: Just a couple. Could
18 you speak to how you -- how you came up with the
19 impact of Civica Rx?

20 MS. BRISSON-LEMIEUX: Yes. So let
21 me find the page to make sure I can say
22 everything I want to say.

23 MS. LUNGE: It's mentioned in
24 Exhibit 18 in your prefiled testimony in page 6,
25 if that's the page you're looking for.

1 COURT REPORTER: Real quick. Can
2 you spell Civica, please?

3 MS. BRISSON-LEMIEUX: I can go
4 ahead and do that. C-I-V-I-C-A, capital R-X, all
5 one word.

6 MS. LUNGE: Thank you.

7 MS. BRISSON-LEMIEUX: Right. And
8 the page I was looking for. Just so you know,
9 where I'm at is Exhibit 1, page 17.

10 MS. LUNGE: Oh, great. Thank you.

11 MS. BRISSON-LEMIEUX: So -- yeah.
12 So Civica RX has -- they released a generic
13 version of abiraterone, which is a specialty
14 drug, and that came into the market to our
15 members at least in September of 2023. And we
16 saw a shift from the brand version to the Civica
17 version, like 100 percent. Now, there's not a
18 lot of members on that particular drug, but it
19 was very expensive.

20 And so what we did, because we saw
21 the 100 percent shift to the generic version in
22 the rating development we have -- so September
23 through December was at the lower cost drug. And
24 what we did is that we took the 1st January
25 through August, it was at the higher cost, and we

1 said, okay, let's reprice that to the lower cost
2 because everybody switched. And that's how we
3 calculated the impact of that one drug.

4 MS. LUNGE: Great. Thank you. My
5 other question was, could you also just speak a
6 little bit about your estimations of the H766
7 impact from removal of prior auth?

8 MS. BRISSON-LEMIEUX: Yes. So for
9 that, we -- there's a few components and I know
10 we talked a little bit about it. So again, I
11 will just turn to the same page to make sure I
12 tell you things that I'm allowed to say in open
13 forum. I believe we answered it in our response
14 to the healthcare advocate question. So Exhibit
15 13, page 2. So for prior auth, right, we have --
16 we did the two sort of main the two places where
17 we have prior authorizations.

18 We have internal programs, and
19 then we have a vendor that helps us with the
20 radiology prior authorization. And we use the
21 similar methodology, different numbers. I won't
22 quote the numbers, but they are on pages two and
23 three, but redacted.

24 We use the same methodology for
25 both, where looking at our historical data for

1 2023, we have information around the savings
2 associated with prior authorization, right. And
3 from there, we looked at the percentage that were
4 for services requested by primary care providers,
5 right. And we assume that those sort of would go
6 away, right, because prior primary care providers
7 were under H766, won't need to submit prior
8 authorizations.

9 MS. LUNGE: Okay. And did you
10 look at in that estimation, the percentage of
11 prior auth denials versus how many were approved
12 right away?

13 MS. BRISSON-LEMIEUX: So my
14 understanding of the data I received, right, so
15 my team did not produce the data --

16 MS. LUNGE: Yeah.

17 MS. BRISSON-LEMIEUX: -- is that
18 the savings that was provided to me was sort of
19 the end result. So I'm assuming that it was for
20 the prior ops that were denied because if it was
21 denial, then appealed, then it would then show up
22 as approved.

23 MS. LUNGE: Okay. All right.
24 Thank you. Let me just check a couple more
25 places, but I think my other questions might have

1 already been asked. That one was. That one was.
2 Okay. I'm good. Thank you.

3 MR. BARBER: Board Member Holmes?

4 MS. HOLMES: Thank you. I just
5 have a couple quick questions, probably. One is
6 a follow up to Dr. Murman's question about the
7 inpatient length of stay increases that you're
8 observing. And I know you mentioned that you're
9 going to kick some of this back to your clinical
10 team to review.

11 And one of the things I think that
12 would be interesting for us to understand, if
13 it's possible, is what proportion of this is
14 driven by increased, you know, acuity of our
15 patients or our, you know, Vermonters or no place
16 to discharge patients because we're hearing a lot
17 from hospitals about having no place to discharge
18 patients to either skilled nursing facilities or
19 mental health beds, or other types of, you know,
20 care. So if that's possible to figure out, that
21 might be helpful as we're trying to think about
22 transformation and some of that work.

23 My second question is just in
24 terms of Exhibit 5. This was the list of some of
25 the programs that Blue Cross Blue Shield has

1 incorporated to increase access, quality, and
2 affordability. And I'm wondering if there --
3 there's a -- there's many programs here. Many of
4 them seem, you know, potentially really helpful
5 in this regard. And I'm wondering if you've done
6 you know, if -- if you have an estimate of the
7 expected net savings to -- to your members
8 associated with each of the programs.

9 So some of them are value-based
10 payment programs, some of them are payment
11 integrity, some of them are utilization
12 management. What I'm really trying to understand
13 is the -- the benefit in terms of cost savings
14 worth the cost of the programs. And how have you
15 factored in the net savings into the premium
16 rates this year?

17 MS. BRISSON-LEMIEUX: So for the
18 programs that have been in place for many years,
19 right, the savings or the results of those
20 programs is embedded in our experience period,
21 right. And so we -- in our trend development, we
22 try to normalize for that because we've seen a
23 growth of that program of those programs. So
24 that is really embedded in the experience.

25 And you know, one of I think a

1 good example here is when we originally -- and
2 like the original H766 had limitation on some
3 payment integrity programs. And we could say,
4 here are the historical savings from that. And
5 that eventually would go away with this, right?
6 So that's how we can measure that.

7 For the value-based payment
8 programs they're still very new. And we work
9 with our independent primary care practices with
10 those. And some of the early results are really
11 good. But we're talking about small populations,
12 right. So then applying it to a whole book of
13 business for a relatively new program there's
14 kind of nothing to put in there, but it's still
15 an investment that we want to make in our
16 independent primary care practices.

17 MS. HOLMES: So does Blue Cross
18 Blue Shield do an analysis over some period of
19 time and decide that they're going to sunset some
20 programs and introduce new ones based on their
21 impact on costs?

22 MS. BRISSON-LEMIEUX: Yeah. We --
23 we do look at the programs and whether it's the
24 sort of the big programs you -- you see on the
25 page, you're even sort of the components of each

1 program. So in our internal utilization
2 management programs, for example, Tom's team
3 reviews the data often, looks at the -- the
4 medical policies and the prior authorizations
5 around, you know, different areas and you know,
6 will remove some of the prior authorizations on
7 areas let's say that, you know, have a really
8 high rate of approval, and we're not seeing the
9 value of this administrative work, let's put it
10 somewhere else. So there is ongoing monitoring
11 of our programs.

12 MS. HOLMES: One thing I'll just
13 say for future reference, and this is, I guess,
14 to the whole Blue Cross Blue Shield team, but
15 it'd be really helpful for us to understand the
16 impact of some of these programs as you're doing
17 the analysis, we're always, you know, we ask
18 hospitals all the time about their cost
19 containment programs and their impact. Similarly
20 here, this is a helpful set of program
21 information, but it doesn't come with the, you
22 know, relevant impact. So that would be helpful
23 in the future to understand. But thank you very
24 much.

25 MS. BRISSON-LEMIEUX: You're

1 welcome.

2 MR. BARBER: Were you done, Jess?

3 MS. HOLMES: Yes, thanks.

4 MR. BARBER: Chair Foster?

5 MR. FOSTER: The average length of
6 stay increased. Is that something to formally
7 across different hospitals or more isolated?

8 MS. BRISSON-LEMIEUX: The data I
9 have in front of me is across the whole insured
10 book. But we can dig into sort of where it's
11 coming from. But I don't have that right here.

12 MR. FOSTER: Okay. That would be
13 great if you could do that. There's, you know,
14 any sort of granularity of where these
15 abnormalities happen. My only other --
16 (indiscernible).

17 MR. BARBER: Owen, we're having
18 trouble hearing you.

19 MR. FOSTER: No trouble here.

20 MR. BARBER: That's better.

21 MR. FOSTER: Probably this. My
22 computer kicked me off.

23 just said, any granularity you
24 have on that that you're able to share would be
25 helpful. My only other question was the Board

1 order from last year around in connection with
2 your negotiations, taking into account
3 affordability, access, and quality of the
4 providers and negotiating the rates. Can you
5 explain what Blue Cross did in connection with
6 that and how it complied?

7 MS. BRISSON-LEMIEUX: Yeah. So as
8 I think it was mentioned earlier today. With the
9 hospital, it is very difficult to get any sort of
10 movement on the rate order that they receive from
11 the Green Mountain Care Board. And so as we look
12 at quality, right, and how do we reward providers
13 for providing better quality, it is very
14 difficult through the commercial rates that, you
15 know, the fee for service rate.

16 And it was one of the things we
17 really considered when we put together our
18 enhanced primary care program, the ECPC program,
19 right, where every metric in that program, it's,
20 you know, there's quality specific, like quality
21 measures, there's a wellness visit threshold and
22 things like that. And so for these practices
23 that are meeting these quality thresholds, we are
24 paying them an incentive. So that is how we can
25 impact the independent practices that have better

1 quality is by giving, you know, when we set up
2 the ECPC program, but it has been very difficult
3 to do something similar on the hospital side.

4 MR. FOSTER: Is there any
5 consideration of access, quality, or
6 affordability in connection with the hospital
7 negotiations with Blue Cross?

8 MS. BRISSON-LEMIEUX: I believe
9 so. I am not the one who negotiates with the
10 hospital. But yes, it is very important to us as
11 an organization. We know it's important to our
12 members, and it's a difficult balance with, you
13 know, making sure that we also provide an
14 adequate network.

15 MR. FOSTER: What quality is
16 considered in connection with negotiating with
17 hospitals?

18 MS. BRISSON-LEMIEUX: I don't know
19 the answer to that question, so we can follow up
20 on that.

21 MR. FOSTER: Okay. And then I
22 don't have the page in front of me, but there is
23 a chart that showed the -- this is probably not
24 the exact phrase you used, but the community
25 providers received larger rate increases than the

1 GMCB regulated entities. Can you speak to that
2 at all?

3 MS. BRISSON-LEMIEUX: Well, again,
4 so I believe that's the cost trend table in the
5 memo. Right, and so that was at the time of
6 filing where we assumed that hospital, Vermont
7 Hospital, would follow the Green Mountain Care
8 Board guidance, right. We did -- we -- every
9 year we look very closely at our community fee
10 schedule, right. And I believe last year we
11 made -- we made improvements to the rates,
12 although I do not know specifically if it was
13 across the Board for all rates or you know, sort
14 of targeted to rates that really needed it.

15 MR. FOSTER: Okay. And nothing
16 else. Thank you. Nice to see you.

17 MS. BRISSON-LEMIEUX: Great to see
18 you.

19 MR. BARBER: Mr. Donofrio, any
20 redirect?

21 MR. DONOFRIO: No, thank you.

22 MR. BARBER: Okay. Thank you, Ms.
23 Lemieux.

24 And I think we're doing okay on
25 time. So turn to Kevin Rugeberg from Lewis &

1 Ellis next. Then we need to hear from Mr. Fisher
2 and take public comment. So we might, I'm
3 guessing we're not going to get through that in
4 half an hour, so probably will need to go past 5
5 a little bit.

6 Does anyone have any conflicts,
7 any problems with -- with that?

8 CHAIR FOSTER: I can't go much
9 past 5 because the Copley Community Meeting this
10 evening.

11 MR. BARBER: Would you be able to
12 read the transcript --

13 CHAIR FOSTER: I can call in.

14 MR. BARBER: -- and watch the
15 video?

16 CHAIR FOSTER: Absolutely.
17 Absolutely.

18 MR. DONOFRIO: Mike, it would
19 be -- on my end it would be good if we push for
20 5:15 or so just a little bit over 5 if possible.

21 MR. BARBER: We'll shoot for that.
22 Kevin, are you with us?

23 MR. RUGGERBERG: I am.

24 MR. BARBER: Laura, are you
25 prepared?

1 MS. BELIVEAU: Yes, although we're
2 much later in the day than we're used to. So I
3 might get a little cranky.

4 MR. BARBER: Let me just swear him
5 in real quick.

6 MS. BELIVEAU: Yes, thank you.

7 MR. BARBER: Sorry, I'm getting a
8 little echo. Laura, could you mute yourself?
9 Whereupon,

10 KEVIN RUGGEBERG,
11 a witness called for examination by counsel for
12 the Petitioner, was duly sworn, and was examined
13 and testified as follows:

14 MR. BARBER: Okay. Go ahead,
15 Laura.

16 MS. BELIVEAU: Okay. Is this is
17 this echoing for people? That's all right?
18 Great. Good afternoon, Kevin, could you state
19 your name for the record?

20 MR. RUGGEBERG: Kevin Ruggenberg.

21 MS. BELIVEAU: And where do you
22 work?

23 MR. RUGGEBERG: Lewis & Ellis.

24 MS. BELIVEAU: Okay.

25 (Indiscernible).

1 MR. RUGGEBERG: I'm sorry I didn't
2 catch that question.

3 MS. LUNGE: Ma'am, your audio is
4 going out pretty badly. You're breaking up.

5 MS. BELIVEAU: Okay. I -- I will
6 switch devices. I'm sorry.

7 MS. LUNGE: We can hear you
8 magically all good now.

9 MS. BELIVEAU: Yeah, yeah. I'll
10 still switch devices. It'll be better for
11 everyone. Let's see. I'll be back in one
12 second.

13 MR. RUGGEBERG: I think the
14 question might have been how long have I been
15 with Lewis & Ellis. I'll answer that while she's
16 changing devices. I believe I'm about to have my
17 eleventh anniversary with Lewis & Ellis.

18 MS. BELIVEAU: Okay. Is this
19 better?

20 MS. LUNGE: Much. Thank you.

21 MS. BELIVEAU: Excellent. So
22 actually was asking what your position at Lewis &
23 Ellis is.

24 MR. RUGGEBERG: I'm a senior
25 consulting actuary.

1 MS. BELIVEAU: And can you please
2 turn to Exhibit 22 of the binder?

3 MR. RUGGEBERG: I'm there.

4 MS. BELIVEAU: Great. And can
5 you -- do you recognize it, and can you briefly
6 describe the information contained in it?

7 MR. RUGGEBERG: Yes. This is my
8 prefiled testimony. It contains information
9 about my educational and work background,
10 information on how we review filings for the
11 Board, and a summary of our recommendations
12 regarding these filings.

13 MS. BELIVEAU: Is the information
14 in this document accurate and correct to the best
15 of your knowledge?

16 MR. RUGGEBERG: With one
17 exception. As Blue Cross has noted, there was a
18 calculation error in our report. We had said
19 that if our recommendations were followed, that
20 the increase would be 14.5 percent in the
21 individual market and 17.4 percent in the small
22 group market. However, there was a mistake in
23 the calculations there. And the correct values
24 are actually 15.2 and 18.0 as -- as noted in Ms.
25 Lemieux's pre-filed testimony.

1 MS. BELIVEAU: Great. And with
2 that being noted do you wish to adopt this pre-
3 filed testimony as part of your testimony today?

4 MR. RUGGERBERG: Yes, I do.

5 MS. BELIVEAU: Okay. Can you
6 briefly describe your role in L & E's review of
7 Blue Cross and Blue Shield of Vermont's
8 individual and small group filings?

9 MR. RUGGERBERG: Yes. I am part of
10 a team of several people at Lewis & Ellis who
11 review these filings. I am personally, and you
12 know, responsible particularly for the Blue Cross
13 filings, whereas my colleague Jacqueline Lee is
14 responsible for the MVP. But we communicate
15 constantly throughout that review process. And
16 we also have several other people on our team who
17 assist in our review of these filings.

18 So upon receiving the filings, I
19 review all of the materials therein, as well as a
20 couple other members of our team. We produce
21 questions to, you know, provide additional
22 information that we need to reach a
23 determination. We discuss internally to make
24 sure that our review of both carriers is
25 consistent. And then we issue a report

1 summarizing our findings and recommendations for
2 the Board.

3 MS. BELIVEAU: And can you
4 describe how you submit those recommendations?

5 MR. RUGGEBERG: Yes. We submit
6 those recommendations in the form of a report
7 that's due 60 days after the filing is submitted.
8 I forget the exact date that that was submitted.
9 Early -- early this month, I believe.

10 MS. BELIVEAU: And there are two
11 reports; is that right?

12 MR. RUGGEBERG: Correct. One for
13 the individual market and one for the small group
14 market.

15 MS. BELIVEAU: Great. And the
16 report for the 2025 individual market is Exhibit
17 14. And the report for the small group market is
18 Exhibit 15. Could you please turn to those?

19 MR. RUGGEBERG: Yes.

20 MS. BELIVEAU: And did you -- I
21 know we discussed in your prefile testimony the
22 changes you wanted to make are those -- those
23 incorporate also into your -- your report. Is
24 that right?

25 MR. RUGGEBERG: Yep.

1 MS. BELIVEAU: So using the
2 corrected figures the recommended increase is now
3 15.2 percent for the individual market and 18
4 percent for small group; is that right?

5 MR. RUGGEBERG: Correct. I'll add
6 the caveat that we also recommended the Board
7 consider update -- updated hospital budget
8 information that wasn't available, but yes.

9 MS. BELIVEAU: Great. Can you
10 explain your standard of review in both filings?

11 MR. RUGGEBERG: Yes. We review
12 these filings to ensure that the proposed rates
13 are actuarially sound, they are adequate, and
14 that they are not unfairly discriminatory. And
15 also that they're not excessive I think is part
16 of that list.

17 MS. BELIVEAU: Yeah. And do you
18 review for affordability?

19 MR. RUGGEBERG: No.

20 MS. BELIVEAU: Using your
21 methodology and standard of review, did you make
22 any recommendations to modify this proposed
23 filing?

24 MR. RUGGEBERG: Yes. We made -- I
25 believe it's six recommendations regarding the

1 individual filing and five regarding the small
2 group. Yeah. Go ahead.

3 MS. BELIVEAU: All right. If all
4 of your recommendations were to be implemented,
5 can you explain what the ultimate projected rate
6 increase would be?

7 MR. RUGGEBERG: A few of our
8 recommendations were not quantified. But if I
9 leave off the discussion of CSR, I believe the
10 answer to that question is 16.0 percent for the
11 individual market and 18.8 percent for the -- the
12 small group market. I'm trying to quickly do
13 that mental math and make sure that's accurate.
14 But I believe that's correct.

15 And then, I believe in the body of
16 our report, we said the Board should consider the
17 input of GFR on the CTR assumption. So I don't
18 want to imply that that's inconsistent with the
19 21.0 and the 24.0. It's been discussed
20 previously today.

21 MS. BELIVEAU: Of course. And
22 have you reviewed the other pre-filed testimony
23 in this proceeding? And have you listened to the
24 testimony today so far? Great. I'm sensitive to
25 the time, and I could go through asking about

1 each of your recommendations, but I -- they are
2 in your -- they are in report and prefile
3 testimonies. So if -- if the Board, if it
4 pleases the Board, we could not go through those
5 item by item. I'm -- if that's acceptable?
6 Great.

7 So if your recommendations as of
8 today are accept -- implemented, do you believe
9 that rates would be excessive?

10 MR. RUGGEBERG: Well, I can't --

11 MS. BELIVEAU: Your audio broke up
12 for me. Could you say that again?

13 MR. RUGGEBERG: No.

14 MS. BELIVEAU: Thanks.

15 MR. RUGGEBERG: Sorry, I can say
16 that again. I said, no. Yeah.

17 MS. BELIVEAU: Do you believe the
18 rates would be inadequate?

19 MR. RUGGEBERG: No.

20 MS. BELIVEAU: Thank you, sir. I
21 don't know if it's me or your audio. And do you
22 believe they would be unfairly discriminatory?

23 MR. RUGGEBERG: No, I do not.

24 MS. BELIVEAU: All right. I have
25 no further questions at this time.

1 MR. BARBER: Any questions from
2 Blue Cross for Kevin?

3 MR. DONOFRIO: No, thank you.

4 MR. BARBER: Eric, any questions
5 from the HCA?

6 MR. SCHULTHEIS: We just have a
7 few quick questions.

8 So hi, Mr. Ruggeberg. I'm going
9 to ask you just a few questions about Lewis &
10 Ellis's actuarial recommendations that you filed
11 in these cases. Could you turn to Exhibit 14,
12 page 22? That's Lewis and Ellis' actuarial
13 recommendations for the individual filing. Let
14 me know when you're there. Are you there? Okay.
15 So take a look at the histogram up near kind of
16 the top of the page about the histogram showing
17 the distribution of CTR.

18 So the originally filed
19 contribution to reserves, the three percent
20 places Blue Cross roughly or essentially in the
21 middle of that hump, correct?

22 MR. RUGGEBERG: Correct.

23 MR. SCHULTHEIS: And that's the
24 bin that's highlighted, right, the three percent.
25 Now, I'm having trouble hearing you, too.

1 MR. RUGGEBERG: I'm sorry, yes.

2 The bin that is a different color is reflective
3 of the initially filed three percent. Yes.

4 MR. SCHULTHEIS: And so as you
5 mentioned in the report, in the memorandum, Blue
6 Cross has changed that CTR request to seven
7 percent; is that correct?

8 MR. RUGGEBERG: That is correct.

9 MR. SCHULTHEIS: And then you say
10 in a few in the first, second, third, I guess the
11 third paragraph that that seven is abnormally
12 high. So looking at that histogram above, that
13 would put it in the second to highest bin on the
14 right, right?

15 MR. RUGGEBERG: I think it would
16 probably technically be the highest bin just
17 because, at least in the individual market,
18 there's also a slight amount for bad debt. So I
19 think it's technically about 7.1. So I think
20 it's actually the highest bin.

21 MR. SCHULTHEIS: Okay. And so I'm
22 just trying to understand how to read this
23 histogram, and I want to make sure I have it
24 right. So let's just assume we know it's
25 actually higher. But let's say it was in the

1 second to highest bin when it says 6.5 percent,
2 that means 6.5 percent of the carriers that you
3 looked at filed CTR, that's in that bin, that
4 amount?

5 MR. RUGGEBERG: Those -- so those
6 ranges are -- so all of the text that you're
7 seeing there is describing the upper and lower
8 bounds of that bin.

9 MR. SCHULTHEIS: Of the bin?

10 MR. RUGGEBERG: So --

11 MR. SCHULTHEIS: Okay.

12 MR. RUGGEBERG: -- what it's
13 saying is that that bin, which I imagine is one
14 carrier, is everyone from 6.5, I take it 6.500001
15 up to 7.0. There's one carrier falling in that
16 range.

17 MR. SCHULTHEIS: Okay.

18 MR. RUGGEBERG: So a number of
19 carriers is being communicated by the -- the
20 vertical axis. So for example, the bin in which
21 Blue Cross Vermont falls is fifty or fifty-one,
22 or fifty-two -- something in that space -- that
23 many carriers have a CTR in that range.

24 MR. SCHULTHEIS: And so maybe you
25 can't do this math with the information you have.

1 But so you had mentioned the three percent places
2 Blue Cross in the what, the fifty-ninth
3 percentile for QHP carriers, for CTR. What
4 percentile would it be in with the seven percent
5 CTR request?

6 MR. RUGGEBERG: Could I get back
7 to you with a precise number. I can confidently
8 say it looks like 3 or 4 carriers were that high
9 in 2023 out of approximately 300. So that would
10 be about the -- the ninety-ninth percentile.

11 MR. SCHULTHEIS: Ninety-ninth
12 percentile.

13 MR. RUGGEBERG: Approximately. So
14 somewhere between 90, ninety-nine and a half,
15 something like that.

16 MR. SCHULTHEIS: So just to be
17 clear for everyone who's listening, what that
18 means -- that means -- let's say it's -- we'll
19 put it at the ninety-eighth percentile just to be
20 safe. That means it's higher than ninety percent
21 of the carriers that you looked at in terms of
22 CTR requests.

23 MR. RUGGEBERG: Correct. Granting
24 the ninety-eight percent, as you said, higher
25 than ninety-eight percent rather than ninety, but

1 yes.

2 MR. SCHULTHEIS: Okay. Thank you
3 so much, Mr. Ruggeberg. That's all my questions.

4 MR. BARBER: Do any Board members
5 have questions for Kevin?

6 MR. WALSH: I do.

7 MR. BARBER: Why don't you go
8 ahead, Thom?

9 MR. WALSH: Thank you. Could we
10 turn to Exhibit 14, page 3, the table at the
11 bottom of that page. Would you please describe
12 what constitutes the difference between the gross
13 and net changes in premium as outlined in the
14 table?

15 MR. RUGGEBERG: Absolutely. Gross
16 premium is a reference to premium pre-subsidy.
17 So that's the premium that is technically being
18 considered by the Board in this hearing. That is
19 the amount that Blue Cross will receive per
20 member per month when members enroll in that
21 coverage. When we say net premium, we're
22 referring to the premium that will be paid by the
23 member, the -- either a small group employer, an
24 individual, or family, et cetera.

25 There is a -- in the individual

1 market significant gap between those two numbers
2 because a substantial portion of the premium,
3 especially for lower income households, is paid
4 for by federal subsidies. So when we say, for
5 example, the -- the gross premium is think --
6 let's see. It's been a second since I read this
7 chart. I want to make sure I'm interpreting it
8 correctly because I see it says -- oh, yes.

9 So the -- the net premium for many
10 members is actually zero to buy Bronze or
11 catastrophic coverage. That's because the
12 subsidies provided by the Federal Government
13 exceed the gross premium for those plans.

14 MR. WALSH: Yeah. Thank you. And
15 the sentence right above the table, you use the
16 phrase "a large majority". Can you help me get a
17 better quantitative assessment of what that is?

18 MR. RUGGEBERG: Yeah. So a very
19 relevant number I would point you to is in the
20 paragraph prior. According to the most recent
21 data we had at the time, eighty-eight percent of
22 households in Vermont's individual market receive
23 advanced premium tax credits. So for those
24 members, the subsidies are increasing very
25 quickly. And so for all of those eighty-eight

1 percent of members I -- I should be careful. I
2 believe it is the case that all of them will be
3 able to purchase gold in 2025 for less than they
4 could in 2024, at least from Blue Cross.

5 I'm not able to quantify -- I'm
6 not even sure I can at all, frankly, even with
7 more time. What percent like the distribution of
8 APTC members by metal tier. So to the extent
9 that they choose Bronze plans, for example, their
10 net premiums won't actually decrease because
11 they're already zero. And some of those people
12 receive APTC and purchase silver. Most of the
13 Blue Cross Silver rates, even on a net basis,
14 will increase. But I think it's accurate to say
15 anyone who receives APTC and purchases a Gold or
16 Platinum will see their premium go down. And I
17 think some people who receive APTC, who are
18 currently purchasing Silver, will be able to
19 switch to Gold and get a richer plan for less
20 money.

21 And so because there's an
22 expectation of people changing plans, it's very
23 difficult for me to talk about very precise
24 numbers here.

25 MR. WALSH: So that -- and the

1 thing that I'm trying to keep clear in my mind,
2 we've been talking about extraordinary increases
3 in gross rates. The net rate changes for
4 individuals receiving subsidies would be much
5 less?

6 MR. RUGGEBERG: Correct. So the
7 small group, none of this applies. But within
8 individual -- within individual, the kind of top
9 line rate increase number that is now being
10 discussed is being 21.0 is not directly relevant
11 to very many members, particularly this year
12 given the change to CSR loads. So the -- the
13 dramatic increases to subsidies mean that
14 individual households will not, in most cases,
15 see a twenty-one percent rate increase if they
16 keep similar coverage.

17 MR. WALSH: And will the -- what
18 I'll refer to, for lack of a better term right
19 now, the -- the increase as a result of the
20 Department of Financial Regulations' review of
21 going from a three percent contribution to
22 reserve to seven, would that materially change
23 this table?

24 MR. RUGGEBERG: It -- it would.
25 The subsidies, at least right now, are projected

1 to be based on premiums for MVP plans. So the
2 subsidies based on the second lowest cost,
3 Silver. As a consequence, changes to Blue Cross
4 rates relative to the initial filing don't change
5 the subsidies. So every dollar of gross premium
6 change flows directly to gross -- or sorry, to
7 net premium as well. Yeah.

8 MR. WALSH: Would it be possible
9 please, to have a similar table resubmitted but
10 reflecting that change from three to seven
11 percent?

12 MR. RUGGEBERG: Absolutely. Just
13 for clarity's sake, only the three to seven or
14 also the other changes subsequent to our report?

15 MR. WALSH: Other changes,
16 inclusive. And then this the increased Silver
17 loading that has taken place this year appears to
18 be pretty beneficial as far as affordability.
19 Are there long-term implications from having such
20 a high Silver load?

21 MR. RUGGEBERG: The main
22 implication is that it does slightly increase the
23 risk to carriers in this market, in that the --
24 the profitability of members between metal tiers
25 is made less equitable, you could say. So if a

1 carrier were to lose all of their Silver members
2 the rate, you know, the rates are calculated
3 under the assumption that they will continue to
4 have those Silver members. So the -- the
5 contribution to reserve would -- would -- would
6 drop to the extent that they lose Silver members.
7 And that -- go ahead.

8 MR. WALSH: The -- if I'm
9 understanding you correctly, the long term
10 implication is if there's flight out of the
11 Silver plan and everybody goes to Gold or Bronze,
12 there may not be enough dollars coming into the
13 plan?

14 MR. RUGGEBERG: So that in theory
15 is a concern. That one is less, frankly, a
16 concern than what I intended to say. So --

17 MR. WALSH: But --

18 MR. RUGGEBERG: -- any members who
19 are eligible for CSR would generally, especially
20 if it's greater than the 73 percent CSR. If
21 they're eligible to basically have a Platinum
22 plan by purchasing a Silver, there's really no
23 incentive for them to flee Silver because
24 their -- their premium will be based on the
25 subsidies anyway. They don't tend to pay a ton

1 of premium and wouldn't benefit from switching.
2 So the carriers have already kind of assumed that
3 the small amount of people who would maybe have a
4 reason to make that flight already will with --
5 with these CSR changes.

6 MR. WALSH: I see.

7 MR. RUGGEBERG: So -- so that's
8 not going to be a significant risk in this market
9 to my understanding. What I intend is that those
10 Silver members, who both carriers want, may shift
11 between carriers. And they are attractive to
12 both carriers. So to the extent that they shift,
13 that would benefit one carrier over the other.
14 And that's a problem that exists regardless of
15 our CSR guidance, of course. But it is a risk in
16 the system that is exacerbated --exacerbated by
17 the CSR guidance.

18 MR. WALSH: I understand. Thank
19 you. Those are all my questions.

20 MR. BARBER: Board member Murman?

21 MR. MURMAN: I think Thom and
22 Kevin discussed my area of interest, so I don't
23 have any questions now.

24 MS. LUNGE: You're muted. But I
25 don't have any questions.

1 MR. BARBER: Sorry about that. I
2 saw Jess shaking her head. Do you have any
3 questions, Jess?

4 MS. HOLMES: No. I'm good, thank
5 you.

6 MR. BARBER: Chair Foster? Okay.
7 So it sounds like Kevin, you'll be submitting an
8 updated table reflecting the net and gross
9 premiums for a hypothetical family of four with
10 an income of \$60,000?

11 MR. RUGGEBERG: Yes, I will do
12 that.

13 MR. BARBER: Thank you. Mr.
14 Fisher, are you with us?

15 MR. FISHER: I am.

16 MR. BARBER: Okay. Are you ready
17 to take the oath?

18 MR. FISHER: I am ready.

19 MR. BARBER: Okay.

20 Whereupon,

21 MICHAEL FISHER,
22 a witness called for examination by counsel for
23 the Petitioner, was duly sworn, and was examined
24 and testified as follows:

25 MR. BARBER: Okay. Please go

1 ahead.

2 MR. FISHER: Good afternoon, Board
3 members. It's been quite a long day. And I'll
4 attempt to be brief, but I do have a few things I
5 wanted to say. This is indeed an extraordinary
6 year. I can't remember a year, and ever, you
7 know, a time where the demands of both the
8 affordability side and the solvency side of the
9 equation have been more pressing. I don't envy
10 you in this position. You have precious few
11 options in front of you.

12 The solvency concerns of Blue
13 Cross does not change consumer affordability.
14 Yet admittedly, the task of finding a balance
15 between these two competing needs is -- is
16 different this year. The HCA and Blue Cross do
17 not have, don't -- don't appear to have --
18 actually, let me say it differently.

19 The HCA and Blue Cross do not have
20 an agreement about the appropriate range of RBC.
21 We have -- the HCA has and will continue to push
22 back when Blue Cross, DFR or L & E or others talk
23 about RBC goals of 590 or 740. But you hear
24 something different this year, given the numbers
25 that have been discussed.

1 You don't hear the HCA pushing
2 back on the solvency concerns. Indeed, this is a
3 strange year. Today I've heard Blue Cross and
4 the HCA and many Board questions in seeming
5 agreement about the hospital prices and the need
6 to focus on hospital budget process as a key
7 component of reducing the spectacular insurance
8 rate increases.

9 We're not on the same page,
10 though, about the definition of affordability.
11 Quite simply, from our perspective, consumer
12 affordability has to mean can people afford to
13 buy it? We've been having this conversation
14 every year for I don't know how many years about
15 just what affordability means. I look forward to
16 the completion of the affordability guidance, so
17 we don't have to have this conversation again
18 next year.

19 On a different topic, the HCA has
20 expressed concerns about the theoretical risk of
21 adverse selection between the small group and the
22 self-funded markets for a number of years. Due
23 to the Blue Cross Blue Shield answers to HCA
24 questions this year, this concern is much less
25 theoretical.

1 In Exhibit 13 on page 8 for 2023,
2 we see the per member per month claims of small
3 groups that left the fully regulated Blue Cross
4 small group going to self-funded at \$522 per
5 member per month. And the per member per month
6 of the small groups that went in the other
7 direction, leaving the self-funded market and
8 going to the small group at \$883.

9 The numbers of groups are small.
10 In this answer, we only see the small groups that
11 are moving from Blue Cross small group to Blue
12 Cross self-funded, but this is concerning. We
13 are afraid that we are seeing exactly the adverse
14 selection that we feared, and we understand that
15 even a small number of well-sorted small groups
16 moving has the potential to explode the rates of
17 the small group in the future.

18 This is concerning enough that I
19 think it warrants more analysis. I think it
20 should be -- I think it is DFR's job to evaluate
21 what is going on, not just in relation to Blue
22 Cross, but across the whole market, and
23 contemplate actions to reduce this dynamic where
24 healthy, low-cost small groups can go save money
25 in the self-funded market with the self-funded

1 approach, but come back to spread their costs
2 when they become sicker and more expensive.

3 As was just covered a little bit
4 in the last questioning, there is a bright spot
5 this year. The combination of enhanced premium
6 tax credits for 2025, coupled with Silver loading
7 or CSR guidance as is being referred to here,
8 results in significantly improved subsidies in
9 the individual market. Looking at the proposed
10 rates, this is really good for most of the people
11 in the individual market.

12 Of course, we don't know what will
13 happen after the current law expires for the
14 enhanced tax credits for '25. But for next year,
15 we will have better income-based subsidies in the
16 individual market than we have ever seen before.
17 As Eric Schultheis said earlier this morning, the
18 small groups, on the other hand, carry the full
19 weight of the proposed increases.

20 So again, this is an extraordinary
21 year. I'll say it again. I'll say it again.
22 This is an extraordinary year. The HCA will take
23 a few hours. Think about what transpired today,
24 and make our recommendations about our
25 perspective on the balancing act between consumer

1 affordability and insurance solvency in our post-
2 hearing memo.

3 You have precious few levers in
4 front of you. As you did last year, we think
5 it's appropriate for you to look at how much of
6 the proposed increases in hospital commercial
7 rates are warranted in a way where it can be
8 afforded. In a way, rate review is where you get
9 to set the budget. This is how much we have to
10 spend.

11 And in hospital budgets, in a few
12 weeks, you get to decide where you're spending
13 that money. You may decide one hospital has
14 particular needs and really deserves or needs a 5
15 percent increase, and another hospital really
16 should only get a two percent increase. But in
17 aggregate, you get to decide that in this
18 proceeding. And we think you should take
19 advantage of that power in these proceedings.

20 And here's the controversial part.
21 This is extraordinary enough that I think the
22 pressures are such that you should even entertain
23 going below the hospital budget guidance in that
24 consideration. I think I'll stop myself there.
25 I'll get to speak to you again tomorrow, in two

1 days. Thank you for the opportunity to speak.

2 And good luck in your deliberations.

3 MR. BARBER: Michael or Bridget,

4 Do you have any questions for Mr. Fisher?

5 UNIDENTIFIED SPEAKER: I don't.

6 Thank you.

7 MR. BARBER: Okay. And does any

8 Board member wish to ask any questions of Mr.

9 Fisher? Okay. Then I think we're ready to move
10 on to closing statements. Does either party need
11 a few minutes, or should we just move straight
12 there?

13 UNIDENTIFIED SPEAKER: I'm fine to
14 go ahead.

15 MS. ASAY: Blue Cross is ready to
16 go.

17 MR. BARBER: Okay. Then why
18 don't -- why doesn't Blue Cross go ahead with the
19 closing statement?

20 MS. ASAY: Thank you. Good
21 afternoon. Good afternoon, Hearing Officer
22 Barber, Board members, the healthcare advocate,
23 counsel for the healthcare advocate. I want to
24 thank everyone for the time that we've taken
25 today to consider what is, as everyone has said,

1 a very difficult and unusual set of circumstances
2 facing Blue Cross and the Vermont healthcare
3 market this year.

4 Blue Cross's message today is
5 simple. We need the Board to approve fully-
6 funded rates, including a seven percent CTR. As
7 Ruth Greene testified earlier this morning, we do
8 not make this request lightly. We are aware, and
9 painfully so, that this rate increase is not easy
10 for Vermonters to absorb.

11 We are making this request because
12 this is what we need to, as DFR explains,
13 increase and stabilize our reserves. As always,
14 and as is so important in these hearings, the
15 testimony and the questions have ranged across
16 many of the challenges in Vermont's healthcare
17 system. Those challenges are real. They are
18 impacting Vermonters, and these ongoing
19 conversations are critical.

20 All the stakeholders in this
21 system have to continue their collaborative
22 efforts to control the growth of healthcare
23 costs. Just as another example of the headwinds
24 that all of us are facing, it's my understanding
25 that during the hearing today, UVMMC filed to

1 increase its commercial rate increase over its
2 original filing.

3 Blue Cross, for its part, remains
4 a willing participant in these efforts to control
5 healthcare costs and increase access, and we
6 remain fully committed to that work. But in this
7 proceeding this year, Blue Cross's solvency has
8 to be front and center. Our reserves and RBC are
9 precarious, as you've heard from multiple
10 witnesses today. To put it bluntly, we are
11 closer to insolvency than we are to the bottom of
12 our required RBC range.

13 As Commissioner Gaffney explained,
14 the starting point for access is having payers in
15 the marketplace. Payers can only be in the
16 marketplace if they are charging fully funded
17 premiums that cover the cost of claims, the
18 expense of providing insurance, and a minimum
19 contribution to reserves. Protecting Blue
20 Cross's solvency protects access.

21 And charging adequate rates --
22 allowing Blue Cross to charge adequate rates is
23 the primary factor that Blue Cross needs to
24 maintain its solvency. There's been discussion
25 today about other impacts on RBC, and some

1 suggestions that our CTR request here is somehow
2 intended to make up for losses in other markets.
3 That's not right. And I just want to make three
4 things clear as we close today.

5 First, Blue Cross is working
6 across all lines of business to improve its
7 margin. We are requesting 7 percent CTR in large
8 group AHP and medsup. And although Medicare
9 Advantage works differently and it isn't part of
10 the Board's review process, we are working hard
11 to adjust that program and move it to
12 profitability as soon as possible.

13 We're happy to provide more
14 information about that. The rising claims costs
15 that are impacting other lines of business have
16 impacted the rollout of the Medicare Advantage
17 program, but we are not sitting on our heels at
18 that market. The levers are different, and the
19 process is different, but we are working hard to
20 turn that line of business around as well.

21 Second, our CTR request in this
22 market is justified and needed to make these
23 markets sustainable. Taking a look at the
24 historical experience here, the difference
25 between Blue Cross' filed CTR and the approved

1 CTR in these markets over ten years is 47.7
2 million.

3 The chart on page 6 of Exhibit 1
4 shows that we have not gotten in our approved
5 rates, even a minimal CTR, over the past ten
6 years. If we had collected the CTR that we filed
7 for, we would not be asking for 7 percent this
8 year in these markets. Any suggestion that 7
9 percent CTR is abnormally high has to be weighed
10 against both that historical experience and the
11 unusual and very serious solvency concerns that
12 Blue Cross is facing.

13 We also urge the Board not to
14 reduce our proposed rates on the theory that
15 membership loss will reduce RBC demands.
16 Membership loss does nothing to increase and
17 sustain reserves. It is not a long-term
18 solution. And even a tremendous membership loss
19 along the lines of 25,000 people would be 100 RBC
20 points that would still not put Blue Cross into
21 its RBC range.

22 The third point I just want to
23 touch on before finishing, is that the QHP
24 markets are not and have not been subsidizing any
25 other lines of business. So instead, as the

1 historical experience shows, they have been
2 losing money over time. I want to end where Mr.
3 Donofrio started this morning to acknowledge
4 again that this is a very difficult year.

5 Claims costs alone are driving a
6 large rate increase, and we have no choice but to
7 request a 7 percent CTR to address Blue Cross's
8 pressing solvency concerns. You've heard from
9 our witnesses and from Commissioner Gaffney and
10 the Department of Financial Regulation on this
11 point. There's no cushion left here.

12 We are nowhere near our required
13 RBC range, and instead, the current position has
14 triggered a statutory company action level event
15 that requires corrective action, and the
16 corrective action is we need fully funded rates
17 in these markets with a 7 percent CTR. We ask
18 the Board to approve that request. Thank you.

19 MR. BARBER: Thank you Ms. Asay.

20 Mr. Schultheis?

21 MR. SCHULTHEIS: Sure. So you've
22 heard a lot of evidence today about why the
23 massive premium increases for individuals and
24 small businesses are needed. You've also heard,
25 both in this hearing and in public comments, that

1 Vermonters are suffering. Too many of your
2 neighbors can't afford premium rates now, let
3 alone the proposed increases.

4 I said at the start of the
5 hearing, your choice isn't about whether
6 Vermonters will suffer, but when. After
7 listening to this hearing, I want to rephrase a
8 bit. Your decision is about how much suffering
9 happens now. The evidence you've heard makes
10 clear that there will be suffering now, however,
11 Vermonters can only bear so much, and Blue Cross'
12 proposed seven percent CTR is too much.

13 Is Blue Cross' current proposal
14 extreme? Yes. Is Blue Cross proposing to have
15 the full weight of things fall on Vermonters now?
16 Yes. Is Blue Cross' current request a middle
17 ground? No. You don't need to believe me to
18 find out if what I'm saying is true. Consider
19 the current rate proposal against the comments of
20 Vermonters. You will see that there is no doubt
21 that the current rates are too much, that they
22 are too extreme.

23 I mentioned in my opening three
24 things that might move this broken system in the
25 right direction. I want to briefly reiterate

1 them now. First, Blue Cross needs to look
2 inwards. The only people who get hurt by the
3 constant finger pointing to assign blame are
4 Vermonters.

5 Second, define affordability, such
6 that it captures the dual burden of premiums and
7 deductibles on Vermonters. Look, efforts to pull
8 on the levers Dr. Weigel talked about are
9 laudable. They do not mean, however, that a rate
10 is affordable. Reject Blue Cross's claim that
11 affordability doesn't mean the ability to pay for
12 something.

13 Third, regulate the entire cost
14 equation. I want to admit that I fell into the
15 trap of thinking optimizing the regulation of
16 rate review and hospital budgets meant finding a
17 timing solution. Regulating the entire cost
18 equation is not just about timing, though. It is
19 about having two regulatory processes, both of
20 which have consequences. It is unreasonable to
21 expect things to change for the better when only
22 one regulatory process, the regulation of health
23 insurance rates, has teeth. Thank you.

24 MR. BARBER: Okay. Thank you all
25 for a long and good hearing today. I think I'm

1 ready to turn it over to the Chair to take public
2 comment if there is any. But before I do that, I
3 want to check with the parties to make sure
4 there's nothing else we need to discuss.

5 MR. FISHER: Nothing from the HCA.

6 MR. BARBER: I do have a rough
7 list of questions going. I mean, well, as in
8 prior years, we'll send out some follow-up
9 questions from the hearing, but please don't wait
10 on me for that. I think you all probably have
11 some notes and -- yeah. So that'll be coming
12 later this week.

13 And I'll turn it back to you,
14 Chair Foster.

15 CHAIR FOSTER: Thanks. We'll try
16 and keep the public comment moving pretty quickly
17 since we're over considerably, and some folks
18 need to leave.

19 Ms. Gutwin, it looks like your
20 hand is up, so if you have any comment, please go
21 ahead.

22 MS. GUTWIN: Yeah, I'll be brief.
23 I think Blue Cross Blue Shield of Vermont can
24 address lowering costs by encouraging more
25 utilization of the most affordable providers,

1 which are the nonregulated providers. Right now,
2 it's not -- payments aren't based on quality,
3 access or affordability, but on a class,
4 regulated versus nonregulated.

5 And the difference is substantial.
6 So are the savings substantial in potential. But
7 most consumers are unaware of the disparity
8 resulting in substantially higher bills that
9 could be avoided if they were made aware and
10 given choice. And UVM does not, right now, make
11 their patients aware that they can have a lower
12 bill if they go to open MRI, for instance.

13 The substantial added expense of
14 regulated entities hits Vermonters' pockets and
15 all who pay taxes that go into subsidized
16 healthcare. This said, along with the present
17 unsustainable and increasing unaffordable State
18 of healthcare, why is there no discussion about
19 moving towards site-neutral payments with
20 outpatient care based on, like, geographical
21 area?

22 Until we have payments truly based
23 on quality, access, affordability, Blue Cross and
24 Blue Shield could help reduce the impact of these
25 costs by educating and guiding members to more

1 affordable care options if the hospital doesn't.

2 Thank you.

3 CHAIR FOSTER: Thank you, Ms.

4 Gutwin. Any the other public comment at this
5 time? And I'll remind people, we have a panel
6 later this week for discussion of these similar
7 topics. Any other comments? All right. Well,
8 thank you everyone for a very interesting and
9 productive hearing.

10 These are remarkably,
11 extraordinarily difficult times in our healthcare
12 system, and we're benefited by the able counsel
13 and witness presentations today. So thank you to
14 the HCA and counsel for Blue Cross Blue Shield
15 and all the witnesses. We have follow up. We'll
16 get it out to you, and we'll speak again soon.
17 And with that, I'll turn, and I'll move that we
18 adjourn for the day.

19 MS. HOLMES: Second.

20 CHAIR FOSTER: All in favor say,
21 aye.

22 IN UNISON: Aye.

23 CHAIR FOSTER: Thank you.

24 (Whereupon, the proceedings were
25 adjourned at 5:22 p.m.)

1 C E R T I F I C A T E
