

Vermont All-Payer ACO Model
Annual Health Outcomes and Quality of Care Report
Performance Year 5 (2022)

Submitted June 26, 2024

Green Mountain Care Board

1. Executive Summary

Section 7.e of the APM Agreement, Annual Health Outcomes and Quality of Care Report, requires GMCB to report on performance relative to the statewide health outcome and quality targets described in Appendix 1 of the APM Agreement. The quality framework discussed in this report represents 22 carefully selected measures that aim to support improvement on identified population health goals, building on measurement and long-term health care initiatives underway in Vermont at the time the APM Agreement was signed.

This report outlines progress made for each of the quality metrics as required in Appendix 1 – Statewide Health Outcomes and Quality of Care Targets of the First Amended and Restated Vermont All-Payer Accountable Care Organization Model Agreement (“APM Agreement”).¹ These quality metrics include population-level health outcomes, healthcare delivery system quality targets, and process milestones. This report reflects technical changes to quality measures including changes to national measure sets, changes to reflect Vermont-specific reporting mechanisms, and the amended approach to year-over-year “on track” designation.

1.1. Performance Year 5 (2022)

With the conclusion of the fifth performance year (PY5), this report demonstrates that Vermont is currently:

- Improving or remaining constant relative to PY4 results in *four of the six* population-level health outcomes targets,
- Improving upon PY4 results in *five of nine* healthcare delivery system quality targets; and
- Improving upon PY4 results in *five of seven* process milestones.

While there is still much work to do, there are some encouraging signs of delivery system reform. We expect that as the adoption of prospective population-based payments increases relative to fee-for-service reimbursement, we will only see greater momentum in delivery system reform as a result of more flexible funding streams and the ability for providers to plan and invest resources more wisely. This was born out early in the COVID-19 Public Health Emergency (PHE), as fixed payments made through Vermont’s accountable care organization (ACO) programs helped to stabilize health care provider finances prior to the introduction of federal relief funds. Nonetheless, the pandemic posed significant challenges to transformation, as Vermont’s health care providers, community, and State partners were focused on response efforts for the duration of the public health emergency (PHE).

1.2. Considerations

Year-over-year comparisons based on available data should be made with extreme caution. This is particularly true in light of the PHE and its impact on care patterns. In some cases, payer-specific attribution has more than doubled within payer populations since 2018. Additionally, methodological changes limit comparability.

Public Health Emergency

The results presented here, beginning in 2020, will not accurately assess “performance” as initially outlined in the APM Agreement. The effects of the global pandemic and associated PHE necessarily and drastically changed care patterns. The PHE redefined short-term health system priorities to meet immediate acute care needs and stabilize the health care system. These necessary changes are likely to have impacted preventive care and health promotion activities. The full effects of the PHE are still developing and may distort trends for many years to come.

Scale Growth

¹ [Amended and Restated Vermont All-Payer ACO Model Agreement - Extension \(2022\)](#).

As noted above, the increase in scale across the four performance years further complicates the interpretation of the results outlined in this report.

Scale growth over the life of the Model has caused underlying denominator changes in many measures that are specific to the ACO-aligned population. When more Vermonters enter scale-target qualifying programs, it introduces volatility which impairs our ability to compare data from year to year. The below table shows the scale growth through current performance years, with the overall percent change between 2018 and 2022.

	2018	2019	2020	2021	2022	% Change ('18 – '22)
All-Payer	109,914	163,340	230,765	242,758	259,958	136.5%
Medicare	36,860	53,973	53,842	62,392	62,607	69.85%

Source: 2022 Scale Targets and Alignment Report.

Specification Changes

The 2021 measurement year saw changes in Medicare’s methodology for analyzing data from the Consumer Assessment of Healthcare Providers and Systems (CAHPS) survey. Through 2019, benchmarks were calculated as deciles, in 2020 CAHPS surveys were not collected due to the PHE and beginning in 2021 CAHPS benchmarks were calculated based on actual percentiles, creating a significant change in benchmarks. The switch from deciles to performance-based benchmarks leads to more accurate comparisons between providers or provider groups/ACOs. Additionally, beginning in 2021, OneCare’s CAHPS surveys eliminated the use of phone calls.

2. Background

Vermont’s All-Payer Accountable Care Organization Model Agreement (“APM Agreement”) is an arrangement between Vermont and the federal government that allows Medicare to join Medicaid and commercial insurers to pay differently for health care. The APM was originally a five-year agreement (2018-2022); Vermont and CMMI have agreed to extend for three additional performance years (through 2025).² The APM Agreement aims to reduce health care cost growth by moving from fee-for-service reimbursement to risk-based arrangements for Accountable Care Organizations (ACOs) that are tied to quality and health outcomes. Section 7.e of the Amended and Restated APM Agreement,³ Annual Health Outcomes and Quality of Care Report, requires GMCB to report on performance relative to the statewide health outcomes and quality targets: *“The GMCB, in collaboration with AHS, shall submit to CMS for its approval, no later than 18 months following Performance Year 1 and each subsequent Performance Year, an annual report on the State’s efforts to achieve the Statewide Health Outcomes and Quality of Care Targets (“Annual Health Outcomes and Quality of Care Report”). At a minimum, the State shall describe the following in this annual report:*

- i. *For all Performance Years, Vermont’s progress on achieving Statewide Health Outcomes and Quality of Care Targets set forth in Appendix 1;*
- ii. *For Performance Years 1 through 5, how Scale Target ACO Initiatives hold Vermont ACOs accountable for quality of care, the health of their aligned beneficiaries (section 6.b.iv), or both; and*
- iii. *For Performance Years 1 through 5, how the State holds Vermont ACOs accountable to allocate funding for and invest in community health services to achieve the Statewide Health Outcomes and Quality of Care Targets.*

² [Vermont All-Payer ACO Model PY7 Extension \(2024\)](#).

³ [Amended and Restated Vermont All-Payer ACO Model Agreement - Extension \(2022\)](#).

The quality framework discussed in this report represents 22 carefully selected measures that aim to support improvement on identified population health goals, building on measurement and long-term health care initiatives underway in Vermont at the time the APM Agreement was signed. While selecting measures and developing targets, Vermont consistently advocated for measures that addressed key priority areas in the state, alignment with existing measure sets, consideration of collection burden, and targets that are ambitious but realistically achievable over the performance period. The quality framework encourages health, public health, and community service providers to work together to improve quality and integration of care. This collaboration includes ACOs operating in Vermont and their community partners. While any one ACO is not responsible for these outcomes alone, the GMCB will continue to assess their approach to quality improvement through our regulatory levers.

3. Progress on Achieving Statewide Health Outcomes and Quality of Care Targets

3.1. Domains and Measures Included in Statewide Health Outcomes and Quality of Care Targets Monitoring Report

Measures that are tracked in Vermont's Annual Statewide Health Outcomes and Quality of Care Targets Monitoring Report correspond to three overarching goals: (1) reducing deaths related to suicide and drug overdose, (2) reducing the prevalence and morbidity of chronic disease, and (3) increasing access to primary care. **Tables 3.2 -3.4** outline the measures within each domain, including associated goals, baseline performance, performance targets, and the performance for 2018 (PY1) through 2022 (PY5). All measures have been updated to reflect the current APM Agreement and available results, these updates may differ from prior reports. This report does not comprehensively comment on performance across all 22 quality measures but provides information on selected initiatives and programs in place that are aimed at directly impacting the health of Vermonters. All Measure Specifications and Sources can be found in Appendix A.

3.2. Summary Results

Table 3.2: Summary Results for Population-Level Health Outcomes Targets

Goal	Measure	Baseline	2022 Target	2018 (PY1)	2019 (PY2)	2020 (PY3)	2021 (PY4)	2022 (PY5)
Population-Level Health Outcomes Targets				Rate	Rate	Rate	Rate	Rate
Reduce Deaths Related to Suicide and Drug Overdose	Opioid-related deaths among Vermonters/100,000 (Statewide)	17.6 (2017)	10% Reduction from Baseline	20.8/100k	18.3/100k	24.6/100k	33.6/100k	37.0/100k
Reduce Deaths Related to Suicide and Drug Overdose	Deaths Related to Suicide (Statewide)	17.2/100,000 (2016)	16 per 100k VT residents <u>or</u> 20 th highest rate in US	18.8/100k	16.0/100k	18.1/100k	20.3/100k (13 th in US)	17.8/100k
Reduce Chronic Disease	COPD Prevalence (Statewide)	6% (2017)	Increase ≤1%	6%	7%	6%	7%	7%
Reduce Chronic Disease	Diabetes Prevalence (Statewide)	8% (2017)	Increase ≤1%	9%	9%	8%	9%	8%
Reduce Chronic Disease	Hypertension Prevalence (Statewide)	30% (2017) ⁴	Increase ≤1%	30%	30%	30%	30%	32%
Increase Access to Primary Care	Percentage of Adults with Personal Doctor or Care Provider (Statewide)	87% (2017)	89%	86%	86%	85%	90%	90%

⁴ Baseline result for Hypertension Prevalence was updated with the 2022 report.

Table 3.3: Summary Results for Healthcare Delivery System Quality Targets

Goal	Measure	Baseline	2022 Target	2018 (PY1)	2019 (PY2)	2020 (PY3)	2021 (PY4)	2022 (PY5)
Healthcare Delivery System Quality Targets				Rate	Rate	Rate	Rate	Rate
Reduce Deaths Related to Suicide and Drug Overdose	Initiation of Alcohol and Other Drug Dependence Treatment (Multi-Payer ACO)	38.9% (2018)	40.8%	38.9%	40.1%	39.4%	42.2%	44.4%
Reduce Deaths Related to Suicide and Drug Overdose	Engagement of Alcohol and Other Drug Dependence Treatment (Multi-Payer ACO)	13.3% (2018)	14.6%	13.3%	17.1%	18.6%	16.5%	15.8%
Reduce Deaths Related to Suicide and Drug Overdose	30-Day Follow-Up After Discharge from ED for Mental Health (Multi-Payer ACO)	84.4% (2018)	60%	84.4%	89.8%	78.1%	81.0%	81.6%
Reduce Deaths Related to Suicide and Drug Overdose	30-Day Follow-Up After Discharge for Alcohol or Other Drug Dependence (Multi-Payer ACO)	28.2% (2018)	40%	28.2%	27.6%	31.6%	33.2%	66.5%
Reduce Deaths Related to Suicide and Drug Overdose	Growth Rate of Mental Health and Substance Abuse-Related ED Visits (Statewide) ^{5,6}	5.8% (2016 - 2017) ⁷	5%	6% (2017-2018)	5% (2018 - 2019)	-16% (2019 - 2020)	9% (2020-2021)	1.55% (2021-2022)
Reduce Chronic Disease	Diabetes HbA1c Poor Control (Medicare ACO)	58.02% ⁸ (2018)	70 th -80 th percentile (national Medicare benchmark)	Measurement change – result available in 2018 report	13.49% (Medicare 80 th percentile)	13.65% (Medicare 80 th Percentile)	9.98% (Medicare 90 th percentile)	10.00% (Medicare 90th percentile)
	Controlling High Blood Pressure (Medicare ACO)	68.12% (2018)	70 th -80 th percentile (national Medicare benchmark)	68.12% (Medicare 60 th percentile)	71.46% (Medicare 70 th Percentile)	65.32% (Medicare 60 th Percentile)	71.48% (Medicare 70 th percentile)	70.00% (Medicare 70th percentile)
	All-Cause Unplanned Admissions for Patients with Multiple Chronic Conditions (Medicare ACO) ⁹	63.84% (2018)	70 th -80 th percentile (national Medicare benchmark)	63.84% (Medicare 30 th percentile)	60.04% (Medicare 40 th percentile)	30.11% (Medicare 90 th Percentile)	31.61% (Percentile N/A)	30.35% (Percentile N/A)
Increase Access to Primary Care	ACO CAHPS Composite: Getting Timely Care, Appointments and Information (Medicare ACO)	84.62% (2018)	70 th -80 th percentile (national Medicare benchmark)	84.62% (Medicare 80 th percentile)	82.48% (Medicare 80 th Percentile)	N/A Medicare CAHPS measures were not collected in 2020 due to PHE	82.95% (Medicare 40 th percentile)	81.31% (Medicare 30th percentile)

⁵ Vermont Residents only. Shown as a percent change from previous year.

⁶ This measure uses a phased approach. The goal is to reduce the growth rate of mental health and substance abuse-related ED visits to 5% in PY 1-2, 4% in PY 3-4 and 3% by PY5.

⁷ Baseline results for the Growth Rate of Mental Health and Substance Abuse-Related ED visits was updated with the 2022 report.

⁸ The baseline and 2018 result shown is a Medicare composite of ACO #27 (A1c poor control) and ACO #41 (diabetes eye exam) per Medicare Shared Savings Program reporting standards. Beginning in 2019, the result is for ACO #27 only. A lower rate is indicative of better performance on this measure.

⁹ A lower rate is indicative of better performance on this measure.

Table 3.4: Summary Results for Process Milestones

Goal	Measure	Baseline	2022 Target	2018 (PY1)	2019 (PY2)	2020 (PY3)	2021 (PY4)	2022 (PY5)
Process Milestones				Rate	Rate	Rate	Rate	Rate
Reduce Deaths Related to Suicide and Drug Overdose	Number of opioid analgesic morphine milligram equivalents (MMEs) dispensed per 100 residents	61,300 (2017)	Decrease in Rate	52,535	43,782	40,507	37,083	34,327
Reduce Deaths Related to Suicide and Drug Overdose	Adults Receiving Medication Assisted Treatment (MAT) (Statewide, Ages 18-64) ¹⁰ Rate per 10,000 Vermonters	215 per 10,000 Vermonters (2018)	150 per 10,000 Vermonters (or up to rate of demand)	215 per 10,000	230 per 10,000	236 per 10,000	240 per 10,000	239
Reduce Deaths Related to Suicide and Drug Overdose	Screening for Clinical Depression and Follow-Up Plan (Multi-Payer ACO)	50.23% (2018)	70 th -80 th percentile (national Medicare benchmark)	50.23% (Medicare 50 th percentile)	54.47% (Medicare 50 th Percentile)	48.62% (Percentile N/A)	56.64% (Percentile N/A)	61.92% (Medicare 60 th Percentile)
Reduce Chronic Disease	Tobacco Use Assessment and Cessation Intervention (Multi-Payer ACO)	70.56% (2018)	70 th -80 th percentile (national Medicare benchmark)	70.56% ¹¹	84.94% (Medicare 70 th -80 th percentile)	78.95% (Medicare 70 th - 80 th percentile)	88.27% (Medicare 80 th - 90 th percentile)	70.21% (Medicare 70 th - 80 th percentile)
Reduce Chronic Disease	Asthma Medication Ratio: Percentage of Vermont Residents with an Asthma Medication Ratio of 0.50 or Greater (Multi-Payer ACO)	49.3% (2020)	Monitoring	Measure change – see prior reports for corresponding PY results		49.3%	67.1%	65.43%
Increase Access to Primary Care	Percentage of Medicaid Children & Adolescents with Well-Care Visits (Statewide Medicaid)	51.2% (2020)	Monitoring	Methodology change – see prior reports for corresponding PY results		51.2%	56.5%	55.3%
Increase Access to Primary Care	Percentage of Medicaid Enrollees Aligned with ACO (Statewide Medicaid) ¹²	31% (Jan 2018)	≤15 percentage points below alignment rate for Vermont Medicare beneficiaries	31% (Medicaid) 35% (Medicare)	58% (Medicaid) 47% (Medicare)	92% (Medicaid) 47% (Medicare)	79% (Medicaid) 54% (Medicare)	84% (Medicaid) 62% (Medicare)

3.3. Discussion: Statewide Efforts to Address APM Quality Framework

This report does not comment on individual measure performance, rather aims to provide information on selected statewide initiatives in place that are aimed at directly impacting the health of Vermonters. These initiatives and programs are outlined in sections 3.3.1 – 3.3.3 below and are bucketed by the overarching population health goal as outlined in the APM Agreement.

3.3.1 Reduce Deaths Related to Suicide and Drug Overdose

1115 Waiver

The Vermont Department of Health, Division of Substance Use Programs is working on several initiatives through the 1115 Global Commitment waiver designed to enhance and expand substance use disorder treatment and recovery services for Vermonters. Notably, the Substance Use Disorder Community Intervention and Treatment (SUD CIT) program expands access to SUD treatment services for uninsured and underinsured individuals with an SUD diagnosis whose incomes are above Medicaid limits – from 133% FPL up to 225% FPL. Benefits of the SUD CIT will include case management, recovery support, psychoeducation, residential treatment, withdrawal management, counseling, and skilled therapy services. According to the Agency of Human Services, Vermont is the first state to create an eligibility group targeted towards uninsured and underinsured individuals with SUD whose incomes are above the Medicaid limits.¹³

Addressing the Opioid Epidemic

Like many states, Vermonters have suffered from an opioid epidemic that continues to worsen. The number of Vermont deaths attributable to an opioid overdose has increased by a significant margin over recent years, with the new prevalence of the synthetic opioid, fentanyl, serving as a driving factor.

The Vermont Department of Health has adopted several strategies to prevent new cases of SUD. The department has updated the Vermont Prescription Monitoring System, which monitors prescriptions across the state and seeks to prevent overprescriptions and / or incorrect prescriptions. For patients with access to opioids, the department has adopted and expanded upon CDC’s Rx Awareness campaign¹⁴ to educate patient on risk factors for opioid dependency and overdose. And in May 2023, the department was allocated more funding for its drug disposal program, which provides patients with ways to dispose of unused or expired opioid medications. For Vermonters already suffering from SUD, the Vermont Department of Health continues to subsidize four syringe service programs (SSPs) that provide safe use of needles, syringes, and other equipment, and has increased distribution of Naloxone among emergency service providers, pharmacies, SSPs, and community health centers.

Zero Suicide

Vermont currently has three different “tracks” of Zero Suicide implementation which are supported through the Department of Mental Health and the Vermont Department of Health. Tracks include implementation in Designated Agencies (DAs), primary care practices, and emergency departments. Each track is described in more detail below.

Vermont has ten Designated Agencies (DA) engaging in the Zero Suicide Initiative. There have been agencies using the Zero Suicide framework for many years that have been able to implement the framework more

¹³ 11-W-00194/1: [Global Commitment to Health Section 1115 Demonstration](#).

¹⁴ Rx Aware: [Prescription Opioid Awareness](#).

completely and are able to share lessons learned for the agencies more recently introduced to this framework. In addition, they have been partnering with PCMHs on the *Suicide Safer Care Mini Grant Project*, led by the [Center for Health and Learning](#). DAs have been supportive of their staff receiving training in Collaborative Assessment and Management of Suicidality (CAMS), Counseling on Access to Lethal Means (CALM), and Columbia Suicide Severity Risk Scale (CSSRS) amongst others. In 2023, Vermont also launched a youth-focused Zero Suicide Academy and Community of Practice to support Zero suicide implementation at the Brattleboro Retreat and other youth mental health treatment programs in Chittenden, Rutland, Bennington, and Windham counties.

Patient-Centered Medical Homes (PCMH) have been participating in a Zero Suicide Initiative called the *Suicide Safer Care Mini Grant Project*. PCMHs are where numerous people receive their primary care. Currently there are seven PCMHs engaging in this project, which partners them with the DA serving their catchment area to build a suicide safe pathway from one setting to another without losing continuity of care.

VDH is partnering with the Vermont Program for Quality in Health Care (VPQHC) and Vermont's 14 hospitals to improve suicide care in emergency departments (ED) for individuals experiencing suicidality. Each of the fourteen Hospital Emergency Departments in Vermont are participating in the Emergency Department Project, which entails a Zero Suicide organizational self-study, an identified Quality Improvement project of their choosing, and CALM training for staff.

[Comprehensive Suicide Prevention and the 'Facing Suicide' Initiative](#)

In 2020, The Vermont Department of Health received a five-year grant from the CDC to reinforce its suicide prevention efforts. The grant has helped the department improve its population-level approach and expand its preventative services to populations at heightened risk for suicidality, such as rural Vermonters, Vermonters with physical or mental disabilities, and Vermonters within the LGBTQ community. With the benefit of grant funding, the Vermont Department of Health has increased investments in population-level data analysis, expanded gatekeeper training with a focus towards communities at risk, expanded recovery and peer support groups with a focus towards communities at risk, and expanded the Zero Suicide Initiative within DAs, primary care providers, and hospitals (among other initiatives).

The grant has also enabled the Vermont Department of Health to promote awareness of its suicide prevention efforts to the general public. In September 2022, the department launched the Facing Suicide Initiative, a public relations campaign with information on where Vermonters can find resources, contacts, or support groups for themselves and their loved ones.

3.3.2 Reduce Prevalence and Morbidity of Chronic Disease

[Self-Management Programs](#)

The Blueprint for Health, in concert with the Vermont Department of Health work together to provide Self-Management Programming statewide. Program offerings include Blood Pressure Management, Chronic Disease Management, Chronic Pain Management, Diabetes Self-Management Program, Diabetes Prevention Program, and the Quit Smoking Program.¹⁵ From October 2022 – September 2023, a total of 100 workshops were offered and a total of 435 Vermonters completed at least one self-management program.

[3-4-50 Campaign](#)

Since its launch in 2017, Vermont has expanded upon its 3-4-50 campaign, which partners with worksites, schools, faith communities, service organizations, and towns to collect and report physical wellness measures. The campaign helps Vermonters incentivize each towards healthier behavior by engaging in challenges as a

¹⁵ [2022 Annual Report on Blueprint for Health](#).

group. The name of the campaign, 3-4-50, comes from the theory that three behavioral factors (no physical activity, poor diet, and tobacco use) increase one's likelihood of contracting the four diseases (cancer, heart disease & stroke, type 2 diabetes, and lung disease) that result in more than 50% of deaths in Vermont.

3.3.3 Increase Access to Primary Care

Health Care Workforce Recruitment and Retention

Additionally, following recommendations in the [Health Care Workforce Development Strategic Plan](#), Federal Coronavirus State Fiscal Recovery Funds and funds available through Section 9817 of the American Rescue Plan Act were deployed in an effort to increase the health care workforce in Vermont including additional loan repayment opportunities for physician assistants and primary care providers. In March 2022, Governor Scott authorized \$60 million from these funding streams for certain health care and social service employers to provide premium pay for workforce recruitment and retention. One hundred and forty health care and social service employers were awarded premium pay grants during the first round of funding in 2022.¹⁶

The GMCB will continue to monitor primary care access through its regulatory processes, including its [Primary Care Advisory Group](#) and its review of the Vermont Health Care Workforce Development Strategic Plan.

Blueprint for Health

The Blueprint for Health is an established program to integrate high-quality primary and community-based care. Through the Blueprint, providers are encouraged to take a long-term, 'whole person' approach to care—one that addresses medical, social, and mental health needs and provides access to a range of supportive services—in an integrated fashion. The Blueprint supports PCMHs and CHTs to promote care coordination, panel management, and integrated care for mental health and substance use disorders. PCMHs supported by CHTs are also intended to support people who need additional resources to address health-related social needs such as case management, housing, economic services, food insecurity, transportation, and long-term placement.

4. Vermont ACOs' Role in the All-Payer ACO Model Agreement

The APM Agreement leverages the ACO model to support innovation and transformation in pursuit of the Agreement's statewide cost and quality targets. It allows the State to adapt the Medicare Next Generation ACO program to promote alignment across payer programs and to set the Medicare ACO benchmark.

The GMCB also has state regulatory levers over ACOs operating in Vermont. In 2016, the legislature enacted Act 113, which granted authority to the Board to regulate ACOs. The GMCB's ACO regulatory process includes certification, annual budget and program review, and monitoring of the budget order throughout the year. In order to receive payments from Medicaid or commercial insurers, Vermont ACOs must obtain and maintain certification from the GMCB through annual eligibility verification¹⁷. OneCare Vermont ("OneCare"), the only all-payer ACO operating in Vermont, received their initial certification in 2018, with an extensive compliance review of the GMCB Rule 5.000 certification elements. Each calendar year an ACO with any Vermont provider in their network must submit a budget for the coming year that includes a description of their projected network, anticipated payer contracts, operational budget as well as estimates of health service expenditures for which the ACO will be accountable, and population health programs. An ACO is required to present their budget and programs in a public hearing before the GMCB. Vermont's Office of the Health Care Advocate is also a party to the budget process.

¹⁶ [Premium Pay Grantees](#).

¹⁷ See 18 V.S.A. § 9382 (Oversight of accountable care organizations); see generally GMCB's ACO Oversight website, available at <https://gmcboard.vermont.gov/aco-oversight>.

The quality framework in the APM Agreement encourages health, public health, and community service providers to work together to improve quality and integration of care. This collaboration includes OneCare and its community partners – while OneCare is not responsible for these outcomes alone, a major component of the ACO budget review process is GMCB’s review of OneCare’s quality improvement efforts.

In response to the state’s performance to date on APM scale, in November of 2020 AHS issued an assessment of progress and recommendations for improving performance in Vermont’s model for health care reform. This report outlined a number of implementation risks and opportunities that could be leveraged by each stakeholder to ensure Vermont’s continued progress toward the goals of the APM Agreement. Among successes, the plan highlights OneCare’s success in quality framework alignment:

“High performing ACOs maximize alignment of measures across payer contracts to amplify focus on improvement and to reduce administrative burden. OneCare Vermont’s ACO-level quality measures are highly aligned with the Agreement’s quality framework and across payer contracts, reflecting years of ACO standards building, partnership with the GMCB to customize the measure set for the Vermont Medicare ACO Initiative, and collaboration with Medicaid and participating commercial payers to reflect Vermont’s priorities for quality improvement.”¹⁸

This alignment is paramount to meeting the two ACO-specific requirements under the Model; (1) *How Scale Target ACO Initiatives hold Vermont ACOs accountable for quality of care, the health of their aligned beneficiaries, or both; and (2) How the State holds Vermont ACOs accountable to allocate funding for and invest in community health services to achieve the Statewide Health Outcomes and Quality of Care Targets.* Discussion on progress and overall alignment with those two requirements are described in sections 5 and 6, below. Most areas of opportunity for improvement are related to payment models, which, if addressed, would allow for further quality improvement as providers gain flexibility in how they can apply standard payments. We expect that increasing adoption of prospective population-based payments increases relative to fee-for-service reimbursement will yield momentum in delivery system reform as a result of more flexible funding streams and the ability for providers to plan and invest resources more wisely.

5. ACO Accountability for Aligned Beneficiary Health Outcomes and Quality of Care

In 2022, approximately 40% of attribution-eligible Vermonters were attributed to OneCare’s network.¹⁹ The first year of the model (2018) was foundational as the ACO, providers, and payers worked to determine ways to achieve and affect delivery system transformation and implement a system of accountability. In PY2 – PY5 (2019 through 2022), 11 of the 22 APM Agreement measures were reported by the ACO in one or more payer contracts, with complete alignment across payers on five APM measures.²⁰ The remaining APM Agreement measures are largely statewide prevalence measures which the State would not expect an ACO to impact, at least initially. The goal of prevalence measures would be to encourage ACOs operating in Vermont to collaborate on prevention and upstream solutions to preventing chronic disease. As the scale of the model grows and more patients are impacted, Vermont will be tracking how ACOs and State are affecting health outcomes both separately and together.^{21,22}

¹⁸ [All-Payer Model Implementation Improvement Plan.](#)

¹⁹ [2022 Scale Targets and Alignment Report.](#)

²⁰ See Appendix B.

²¹ The GMCB 2018 [ACO Oversight Process.](#)

²² Vermont Department of Health. [State Health Improvement Plan.](#)

OneCare and its network are accountable for aligned beneficiary's' health outcomes and quality of care:

- Through the payer contracts, OneCare's financial incentives are tied to their quality and financial performance.
- Through contracts with health and social service providers, OneCare includes measures holding providers accountable for the provision of services which are intended to improve quality, reduce provider burden, and bring down the total cost of care by providing care at the right time and place. In return, there is a financial distribution to providers based on quality performance. Each of these are described below.

ACO payer and provider contracts are negotiated on an annual basis, allowing for opportunity to modify reporting requirements – this could lead to inconsistencies in year over year alignment – but allow for payer and provider specific augments to the contracts to reflect performance most accurately.

5.1. Payer Contracts

Under GMCB Rule 5.000, and in accordance with 18 V.S.A. § 9382, ACOs operating in Vermont are required to maintain a quality evaluation and improvement program that is actively supervised by a clinical director and evaluated against defined measures. OneCare also has continuous quality improvement requirements in their payer agreements. OneCare examines their prior year ACO quality measure performance in the first quarter of each year, prioritizes data, and sets clinical priorities to achieve going forward that will meet quality and cost outcomes. This is built into their quality improvement program.

Under the ACO certification process and for continued certification eligibility, ACOs must submit both a completed and planned quality improvement plan annually. Under the ACO budget oversight process, OneCare is required to also demonstrate progress being made in their quality improvement program. OneCare's clinical focus areas are reviewed and selected annually and are in addition to the OneCare-specific quality measures included in their payer contracts. The priorities are set by OneCare's Clinical and Quality Advisory Committee.

OneCare's 2022 clinical priorities were to:

1. Decrease prevalence patients with diabetes with HbA1c of above 9%
2. Increase hypertension control
3. Increase rate of developmental screening in the first three years of life
4. Increase screening for clinical depression and follow-up

The process for identifying the 2022 clinical focus areas and progress on the measures was discussed in both the 2021 and 2022 OneCare budget submissions. OneCare stated in its FY22 submission that the process for identifying the clinical priorities remained consistent year over year, but that for this program year, that the clinical priorities (renamed "clinical focus areas") were selected to streamline and align with their care coordination model and Value Based Incentive Fund (VBIF) programs. OneCare's Chief Medical Officer, in collaboration with the Clinical and Quality Advisory Committee, leads the selection process, sets the rates, and votes to present them to the Population Health Strategy Committee for endorsement and review by the OneCare Board of Managers. As in 2021, the 2022 priorities were identified as clinically important, represented opportunity for improvement, and could be monitored monthly with available data for timely action.

One of the premises of the APM is to test whether aligned, risk-based contracts that are tied to an ACO's performance on quality and cost will improve the health of Vermonters and will slow the rate of health care spending. To help support this effort, there is a requirement in the APM Agreement for the ACO, in its Vermont

Medicare ACO Initiative participation agreement, to withhold a portion of the cost of care to be used to reward providers who meet the payer's quality targets. For OneCare, the mechanism for this withhold is the VBIF. In 2022, as in the previous four years, OneCare's Medicaid and BCBS QHP ACO contracts each had a similar withhold from the total spend which is to be distributed to providers based on their quality performance, reinvested in payer program quality improvement initiatives, or a combination of the two. The MVP contract does not have a VBIF component. Once the performance settlements are complete, funds are individually calculated for each participating payer program and OneCare then makes payments separately to each eligible provider participant based on both attribution and performance on quality measures.

5.2. Provider Contracts

OneCare's 2022 provider network included 13 of 14 Vermont hospitals and Dartmouth-Hitchcock (DHMC) in New Hampshire, the largest out-of-state provider of care to Vermonters. Non-hospital providers in the OneCare network included FQHCs, skilled nursing facilities, home health agencies, designated agencies, and independent primary care and specialist practices. 25 independent primary care practices, all 9 FQHCs, 5 of the 6 naturopaths, 23 of 24 specialists, and 46 of 47 continuum of care practices were retained as a part of the network from 2021 through 2022.²³

It is important to highlight that the ACO structure puts OneCare in charge of provider quality accountability through contractual agreements. GMCB oversight of the ACO provides transparency and accountability to ACO-level quality systems for each payer. The GMCB is actively looking for ways to augment other regulatory processes to make quality a more central component of our provider regulation.

6. Vermont ACOs Allocation of Funding and Investments in Community Health Services

The GMCB's ACO Oversight authority outlined in Act 113 and Rule 5.000 requires ACOs operating in Vermont to invest and strengthen key areas to support population health and access to comprehensive primary care, including strengthening and reducing burden in primary care, integrating community-based providers in its care model to promote seamless coordination of care across the care continuum, investing in the social determinants of health to improve population health outcomes, and working to prevent and address the impacts of adverse childhood experiences and other traumas. In addition to this authority, per the APM Agreement Section 8b, the GMCB may direct a Vermont ACO to make specific infrastructure and care delivery investments in support of achieving APM targets. The ACO is held accountable to these investments through the GMCB's budget review, budget order, and quarterly monitoring.

OneCare's 2022 population health investments were derived from two sources: public and private payer agreements and individual participation fees from hospitals. In the 2022 OneCare Vermont ACO Budget Order, the GMCB included several conditions related to investments in population health. These conditions required the ACO to explain to the GMCB if any of the population health management programs are not fully funded, and to fund the SASH and Blueprint for Health programs at an amount trended forward from 2020.²⁴

²³ [OneCare ACO 2022 Fiscal Year Budget Submission](#). Section 2, pp. 18.

²⁴ [OneCare Vermont FY22 ACO Budget Order](#). (February 17, 2022).

6.1. Detailed Descriptions of OneCare's 2022 Population Health Programs

Payments to Primary Care and Social Service Providers

Primary care attributed life per member per month (PMPM)

Payers include these payments in their contracts with OneCare when OneCare practice attest to having achieved a set of criteria to facilitate primary care transformation. The payment is distributed to participating primary care providers on a per member per month (PMPM) basis. OneCare's criteria include population health monitoring activities, utilization of data to identify strengths and opportunities, and the implementation of quality improvement initiatives to strengthen person-centered care and outcomes.

Complex care coordination program payments for primary and social service providers

OneCare's complex care coordination program is designed to engage providers through incentives and tools to increase communication and integration and decrease duplication of services. In the program, rising risk and high-risk patients choose a lead care coordinator from local primary care, social, and home health providers, who are incentivized through an enhanced PMPM to take extra time to coordinate care through regular contact with patients, care conferences with the patient and the care team, and shared documentation in OneCare's online care coordination program.

Blueprint for Health Patient-Centered Medical Home (PCMH)

OneCare's FY22 budget shows continued investment in the Blueprint's PCMH program. Of note, these payments started under the Centers for Medicare and Medicaid Services' Multi-Payer Advanced Primary Care Practice (MAPCP) Demonstration and the Blueprint for Health. Although the MAPCP demonstration has ended, OneCare, through their Vermont Medicare Modified Next Generation ACO Agreement, has been able to continue receipt and distribution of this funding for the state's primary care providers. (See Community-Based Initiatives, below, for descriptions of the Support and Services at Home [SASH] and Community Health Team [CHT] programs.)

Capitated payment reform program for independent primary care providers

2022 was the fifth year of the Comprehensive Payment Reform (CPR) program for independent primary care practices. This program provides additional resources and investments to practices to support the transition to a value-based payment model. Participating practices are required to work on a clinical or quality project throughout the year and report their progress and outcomes. In 2022, the ACO made two noteworthy changes to the CPR program. First, it improved the alignment between CPR payments and the ACO's fixed payments. Second, it adjusted its reimbursement formula to allow practices to increase their provision of non-core services. In 2022, seventeen practices participated in either the full or partial capitation models.²⁵

Withhold for quality improvement initiatives (Value-based Incentive Fund)

OneCare conducts a Value-based Incentive Fund (VBIF) which distributes funds towards practices that excel on a subset of quality measures related to diabetes depression, developmental screenings, and hypertension. Since 2021, OneCare provides individual practices with quarterly data on the practice's performance, including its performance relative to other practices. In 2022, 70% of VBIF funds were distributed to practices that met their quality performance targets; 10% of funds were distributed to practices that met the 'stretch goal' for each measure; and the remaining 20% of funds were directed towards network specialists and collaborating agencies based on HSA-level performance.^{26,27}

Community-Based Initiatives

Supports and Services at Home (SASH) and Community Health Teams (CHT)

The Vermont Medicare ACO Initiative allows OneCare to receive funding from CMMI to continue paying for the Supports and Services at Home (SASH) program that was started under the Blueprint for Health. This funding provides health and social services for Medicare patients in congregate housing. CMMI, through the APM Agreement, also provided continued funding for an initiative started by the Blueprint for Health called Community Health Teams (CHTs), which goes to each health service area in the state to bring providers together to work on quality improvement initiatives, with OneCare and the Blueprint co-facilitate using data from OneCare's information technology platform.

Developmental Understanding and Legal Collaboration for Everyone (DULCE)

This program seeks to ensure that newborns and their families receive quality medical care as well as the social services and community support they need during the first six months of the newborn's life. Families participating in the program receive comprehensive social determinants of health screening with a unique emphasis on the legal needs that might cause family stress or uncertainty.²⁸

7. Conclusion

This fifth annual report demonstrates that Vermont is currently improving or remaining constant relative to PY4 results in four out of six population-level health outcomes targets, as well as improving upon PY4 results in five out of nine healthcare delivery system quality targets and five out of seven process milestones. The State, in concert with CMMI have determined that year-over-year performance improvement will be the measure of success moving forward, with initial targets still being a stretch goal. This is in part due to the effects of the global pandemic and associated PHE and the necessary impact on care-seeking patterns. The PHE redefined short-term health system priorities to meet immediate acute care needs and stabilize the health care system throughout 2020, 2021, and 2022. These necessary changes are likely to have impacted preventive care and health promotion activities.

The GMCB has the regulatory authority to review OneCare's quality improvement initiatives to support continuous quality improvement and success in the APM Agreement. However, it should be noted that the State does not have the authority to require self-insured employers to accept quality measures in alignment with the APM Agreement. The GMCB continues to monitor the ACO's quality programs to ensure alignment (see Appendix B) and continues to review quality measures of new payer programs as they are developed. The GMCB is engaging in further work and research to assess the impact of the ACO on various quality measurements, including access to and utilization of primary care, and inpatient and outpatient care, among others.

Through this annual reporting, the State will continue to identify denominator changes (scale), risk scores, and the impact of the PHE to assess their collective impact on the ability to draw conclusions on aligned beneficiary health over time.

Deaths Related to Suicide (Statewide)	<p>Calculation: Cause of death is coded by ICD-10 Intentional Self-Harm (Suicide). National Center for Health Statistics, Stats of The State reporting.</p> <p>Source: https://www.cdc.gov/nchs/pressroom/sosmap/suicide-mortality/suicide.htm.</p>																												
COPD Prevalence (Statewide)	<p>Calculation: Percent of Vermont resident respondents who answer “yes” to the following question: “Has a doctor, nurse, or other health professional ever told you that you have chronic obstructive pulmonary disease, COPD, emphysema or chronic bronchitis?”</p> <p>Notes: This information is collected annually by the state of Vermont and nationally by the CDC.</p> <p>Source: Vermont Behavioral Risk Factor Surveillance System.</p>																												
Diabetes Prevalence (Statewide)	<p>Calculation: Percent of Vermont resident respondents who answer “yes” to the following question: “Has a doctor, nurse, or other health professional ever told you that you have diabetes?”</p>																												

Measure	Methodology
	<p>Notes: This information is collected annually by the state of Vermont and nationally by the CDC.</p> <p>Source: Vermont Behavioral Risk Factor Surveillance System.</p>
Hypertension Prevalence (Statewide)	<p>This information is collected annually by the state of Vermont and nationally by the CDC.</p> <p>Calculation: Percent of Vermont resident respondents who answer “yes” to the following question: “Has a doctor, nurse, or other health professional ever told you that you have high blood pressure?”</p> <p>Notes: This information is collected bi-annually by the CDC nationally. To meet the terms of the APM Agreement, the GMCB works with the Vermont Department of Health to ensure that the hypertension prevalence question is collected through the survey annually. This includes proposal preparation, staff presentation to the Vermont BRFSS committee and payment to add the measure to the data collection tool.</p> <p>Source: Vermont Behavioral Risk Factor Surveillance System.</p>
Percentage of Adults with Personal Doctor or Care Provider (Statewide)	<p>Calculation: Percent of Vermont resident respondents who answer “yes” to the following question: “Do you have one person you think of as your personal doctor or health care provider?”</p> <p>Notes: This information is collected annually by the state of Vermont and nationally by the CDC.</p> <p>Source: Vermont Behavioral Risk Factor Surveillance System.</p>

Table A.2: Health Care Delivery System Targets – Measure Summaries and Methodologies

Measure	Methodology
Initiation of Alcohol and Other Drug Dependence Treatment (Multi-Payer ACO)	<p>Calculation: Follows HEDIS specifications for Initiation and Engagement of Treatment (IET); the percentage of adolescent and adult members with a new episode of alcohol or other drug (AOD) abuse or dependence who initiate treatment through an inpatient AOD admission, outpatient visit, intensive outpatient encounter or partial hospitalization, telehealth or medication treatment within 14 days of the diagnosis.</p> <p>Notes: Denominator results presented exclude Part A only and Part B only Medicare beneficiaries.</p> <p>Source: VHCURES.</p>

Measure	Methodology
Engagement of Alcohol and Other Drug Dependence Treatment (Multi-Payer ACO)	<p>Calculation: Follows HEDIS specifications for Initiation and Engagement of Treatment (IET); the percentage of adolescent and adult members with a new episode of alcohol or other drug (AOD) abuse or dependence who initiated treatment and who were engaged in ongoing AOD treatment within 34 days of the initiation visit.</p> <p>Notes: Denominator results presented exclude Part A only and Part B only Medicare beneficiaries.</p> <p>Source: VHCURES.</p>
30-Day Follow-Up After Discharge from ED for Mental Health (Multi-Payer ACO)	<p>Calculation: Follows HEDIS specifications for Follow-up After Emergency Department Visit for Mental Illness (FUM). Shown as the percentage of ACO-aligned beneficiaries' emergency department (ED) visits for members 6 years of age and older with a principal diagnosis of mental illness or intentional self-harm, who had a follow-up visit for mental illness. Specifically, the percentage of ED visits for which the member received follow-up within 30 days of the ED visit (31 total days).</p> <p>Notes: Denominator results presented exclude Part A only and Part B only Medicare beneficiaries.</p> <p>Source: VHCURES.</p>
30-Day Follow-Up After Discharge for Alcohol or Other Drug Dependence (Multi-Payer ACO)	<p>Calculation: Follows HEDIS specifications for Follow-up After Emergency Department Visit for Alcohol and Other Drug Abuse or Dependence (FUA). Shown as the percentage of ACO-aligned beneficiaries' emergency department (ED) visits for members 13 years of age and older with a principal diagnosis of alcohol or other drug (AOD) abuse or dependence, who had a follow up visit for AOD. Specifically, the percentage of ED visits for which the member received follow-up within 30 days of the ED visit (31 total days).</p> <p>Notes: Denominator results presented exclude Part A only and Part B only Medicare beneficiaries.</p> <p>Source: VHCURES.</p>
Number of Mental Health and Substance Abuse-Related ED Visits (Statewide)	<p>Shown as the percent change from previous calendar year. Results utilize CCS 5 groupings for ED visits. Diagnosis categories include:</p> <ul style="list-style-type: none"> - Adjustment disorders - Anxiety disorders - Attention-deficit conduct and disruptive behavior disorders - Developmental disorders - Disorders usually diagnosed in infancy, childhood, or adolescence

Measure	Methodology
	<ul style="list-style-type: none"> - Impulse control disorders - Mood disorders - Personality disorders - Schizophrenia and other psychotic disorders - Alcohol-related disorders - Substance-related disorders - Suicide and intentional self-inflicted injury - Screening and history of mental health and substance abuse codes - Miscellaneous disorders <p>Source: VUHDDS.</p>
Diabetes HbA1c Poor Control (Medicare ACO)	<p>Calculation: Percentage of patients 18 to 75 years of age with diabetes who had hemoglobin A1c > 9.0% during the measurement period. Only patients with a diagnosis of Type 1 or Type 2 diabetes should be included in the denominator of this measure; patients with a diagnosis of secondary diabetes due to another condition should not be included.</p> <p>Notes: ACOs stopped reporting ACO-41 (Diabetic Eye Exam) after 2018. Since it was one of a two measure composite for diabetes, along with ACO-27, the 2018 result reflects the composite. Beginning in 2019, ACO-27 is assessed as an individual measure.</p> <p>Source: Centers for Medicare and Medicaid Services (2019 specification).</p>
Controlling High Blood Pressure (Medicare ACO)	<p>Calculation: The percentage of Medicare ACO beneficiaries aged 18-85 with a documented diagnosis of hypertension and a blood pressure reading of < 140/90 mm Hg at their most recent ambulatory office visit.</p> <p>Notes: Denominator excludes patients with evidence of end stage renal disease (ESRD), dialysis or renal transplant before or during the measurement period. Also excludes patients with a diagnosis of pregnancy during the measurement period OR Patients age 65 and older in Institutional Special Needs Plans (SNP) or Residing in Long-Term Care with a POS code 32, 33, 34, 54 or 56 any time during the measurement period.</p> <p>Source: Centers for Medicare and Medicaid Services (2019 specification).</p>
All-Cause Unplanned Admissions for Patients with Multiple Chronic Conditions (Medicare ACO)	<p>Calculation: Risk-adjusted outcome measure. Includes Medicare-fee-for-service beneficiaries 65 years or older who have two or more of the following nine chronic conditions:</p> <ul style="list-style-type: none"> - AMI

Measure	Methodology
	<ul style="list-style-type: none"> - Alzheimer's disease and related disorders or senile dementia - A Fib - Chronic kidney disease - COPD or asthma - Depression - Diabetes - Heart failure - Stroke or TIA <p>Source: Centers for Medicare and Medicaid Services (2019 specification).</p>
ACO CAHPS Composite: Getting Timely Care, Appointments and Information (Medicare ACO)	<p>Calculation: Survey asks patients how often they got appointments for care as soon as needed and timely answers to questions when they called the office. The survey also asks patients how often they saw the doctor within 15 minutes of their appointment time.</p> <p>Source: Centers for Medicare and Medicaid Services (2018 specification).</p>

Table A.3: Process Milestones – Measure Summaries and Methodologies

Measure	Methodology
Number of Opioid Analgesic Morphine Milligram Equivalents Dispensed per 100 Residents.	<p>Calculation: The number of opioid analgesic morphine milligram equivalents (MME) dispensed per 100 residents. Data are from Vermont’s prescription drug monitoring program.</p> <p>Source: Vermont Department of Health, Alcohol and Drug Abuse Programs.</p>
Adults Receiving Medication Assisted Treatment (MAT) (Statewide, Ages 18-64)	<p>Calculation: Count of Vermont Adults (18-64) receiving Medication Assisted Treatment in Vermont Hub and Spoke programs. Q4 results are utilized for all performance years.</p> <p>Source: Vermont Department of Health, Alcohol and Drug Abuse Programs.</p>
Screening and Follow-Up for Clinical Depression and Follow-Up Plan (Multi-Payer ACO)	<p>Calculation: Percentage of patients aged 12 years and older screened for depression on the date of the encounter using an age appropriate standardized depression screening tool AND if positive, a follow-up plan is documented on the date of the positive screen. Results are derived from Medicare, Medicaid and Commercial QHP performance and weighted based on attribution within each of those payer programs. Results are combined and given a total percentage score which is then compared to the Medicare performance benchmarks.</p> <p>Source: ACO-payer contract results.</p>

Measure	Methodology
Tobacco Use Assessment and Cessation Intervention (Multi-Payer ACO)	<p>Calculation: Percentage of patients aged 18 years and older who were screened for tobacco use one or more times within 24 months AND who received tobacco cessation intervention if identified as a tobacco user. Results are derived from Medicare and Medicaid performance and weighted based on attribution within each of those payer programs. Results are combined and given a total percentage score which is then compared to national Medicare performance benchmarks.</p> <p>Source: ACO-payer contract results.</p>
Percentage of Vermont Residents with an Asthma Medication Ratio of 0.50 or Greater (Multi-Payer ACO)	<p>Calculation: Beginning in 2020, follows HEDIS specifications for Asthma Medication Ratio (AMR). The percentage of ACO-aligned Vermonters in VHCURES 5-64 years of age who were identified as having persistent asthma and had a ratio of controller medications to total asthma medications of 0.50 or greater during the measurement year.</p> <p>Notes: Denominator results presented exclude Part A only and Part B only Medicare beneficiaries.</p> <p>Source: VHCURES.</p>
Percentage of Medicaid Child and Adolescent Well-Care Visits (Statewide Medicaid)	<p>Calculation: Beginning in 2020, follow HEDIS specifications for Child and Adolescent Well-Care Visits (WCV). The percentage of Vermont Medicaid beneficiaries 3-21 years of age who had at least one comprehensive well-care visit with a PCP or OB/GYN practitioner during the measurement year.</p> <p>Source: VHCURES.</p>
Percentage of Medicaid Enrollees Aligned with ACO (Statewide Medicaid)	<p>Calculation: Shown as percentage of all Medicaid-enrolled Vermonters who are aligned to the ACO in a given performance year.</p> <p>Source: Annual Scale Targets and Alignment Report.</p>

Appendix B: Measure Crosswalk

Measure	Vermont All-Payer ACO Model	2022 Vermont Medicaid Next Gen	2022 Medicare Initiative	2022 BCBSVT QHP/ Primary	2022 MVP Next Gen	Notes
% of adults with a usual primary care provider	X					
Statewide prevalence of Chronic Obstructive Pulmonary Disease	X					
Statewide prevalence of Hypertension	X					
Statewide prevalence of Diabetes	X					
% of Medicaid children and adolescents with well-care visits	X					For APM Agreement, all Medicaid adolescents in VHCURES, excluding dual-eligible. For Payer programs, payer-specific measure of well-care visits for attributed commercial population.
Initiation of alcohol and other drug dependence treatment	X					BCBSVT and MVP Next Gen treat these measures as a single composite measure; All-Payer ACO Model, Medicare Initiative and Vermont Medicaid Next Gen treat them as separate measures.
Engagement of alcohol and other drug dependence treatment	X					
30-day follow-up after discharge from emergency department for mental health	X					
30-day follow-up after discharge from emergency department for alcohol or other drug dependence	X					
% of Vermont residents receiving appropriate asthma medication management	X					

Measure	Vermont All-Payer ACO Model	2022 Vermont Medicaid Next Gen	2022 Medicare Initiative	2022 BCBSVT QHP/ Primary	2022 MVP Next Gen	Notes
Screening for clinical depression and follow-up plan (ACO-18)	X					Reported in Statewide Health Outcomes and Quality of Care Report. Measure is a combination of claims and clinical data (chart review). Annual reported scores are weighted based on participating program data received from the ACO and/or payer.
Tobacco use assessment and cessation intervention (ACO-17)	X					
Deaths related to suicide	X					
Deaths related to drug overdose	X					
% of Medicaid enrollees aligned with ACO	X					
# per 10,000 population ages 18-64 receiving medication assisted treatment for opioid dependence	X					
Rate of growth in mental health or substance abuse-related emergency department visits	X					
# of queries of Vermont Prescription Monitoring System by Vermont providers (or their delegates) divided by # of patients for whom a prescriber writes prescription for opioids	X					
Hypertension: Controlling high blood pressure	X					
Diabetes Mellitus: HbA1c poor control	X					
All-Cause unplanned admissions for patients with multiple chronic conditions	X					

Measure	Vermont All-Payer ACO Model	2022 Vermont Medicaid Next Gen	2022 Medicare Initiative	2022 BCBSVT QHP/ Primary	2022 MVP Next Gen	Notes
Consumer Assessment of Healthcare Providers and Systems (CAHPS) patient experience surveys	X					Surveys vary by program. All-Payer ACO Model includes ACO CAHPS Survey composite of Timely Care, Appointments, and information for ACO-attributed Medicare beneficiaries. Medicare Initiative includes multiple ACO CAHPS composites for ACO-attributed Medicare beneficiaries. BCBSVT Next Gen includes care coordination composite and tobacco cessation question from CAHPS PCMH for ACO-attributed BCBSVT members. MVP Next Gen includes the care coordination composite score.
ACO all-cause readmissions (HEDIS measure for commercial plans)						
Risk-standardized, all-condition readmission (ACO-8)						
Influenza immunization (ACO-14)						
Colorectal cancer screening (ACO-19)						
Developmental screening in the first 3 years of life						
Follow-up after hospitalization for mental illness (7-Day Rate)
