**Referral Lag** 

February & March 2024

Referral lag: percentage of appointments scheduled within 3 business days of referral (percentage of all referrals where the clinic or hospital has completed scheduling an appointment within 3 business days of receiving the referral, regardless of the date on which the appointment will take place).

Gifford Health Care implemented the Meditech Expanse Electronic Medical Record (EMR) in October 2023 and continues to work towards optimizing functionality. During the optimization stage, workflows have been adjusted and revised which results in a lack of data consistency and limited reporting capabilities at this time. Referral workflows in particular have been a challenge. There is not currently a link between a referral and the resulting scheduled appointment that satisfies the referral. Therefore reporting on this measure is not currently possible. We will continue to work to understand these workflows and improve reporting.
