In regards to the proposed budget for OneCare for 2021 and it's request for an 18% salary increase for its top CEOs, not one cent more should be put into salaries. If they cannot live on the six figures they already glom from our pockets, they should be dismissed as quickly as possible. While I and everyone else realizes that this is a negotiator's trick as old as the millennia of starting high, whining how they can't live without it, then working down and they grudgingly accept it, they should not get even a 1% salary increase. My wages went down this year because of the pandemic. Why should theirs go up and mine goes down and I have to pay these salaries?
